REPORT UPON

Births, Marriages and Deaths FOR THE YEAR 1926

The Fifty-seventh Annual Report of Vital Statistics for the Province of Ontario is herewith presented.

POPULATION

The estimated population for 1926 is 3,146,000. This is an increase of 1.13 per cent. over the preceding year. The distribution was as follows:

City municipalities	1,302,467 or 41.4%
Towns of over 5,000 population	208,896 or 6.6%
Rural (including towns and villages under 5,000 population)	1 634 637 or 51 9%

BIRTHS

	1926	Ratio	1925	Ratio
Entire Province	67,617	 21.5	70,122	 22.6
Cities	29,633	 22.7	30,938	 24.2
Towns	3,980	 19.6	5,536	 28.8
Rural	34,004	 20.8	33,639	 20.6

There was a numerical decrease of 2,505 and a decrease of 1.1 in the rate. For the decade 1917-1926, the number and ratio per 1,000 of population were as follows:

Year	Births	Ratio	Year	Births	Ratio
1917	62,666	 22.6	1922	71,320	 23.0
1918	64,729	 23.0	1923	70,056	 23.1
1919	62,774	 22.0	1924	71,510	 23.3
1920	72,511	 25.1	1925	70,122	 22.6
1921	74,152	 25.3	1926	67,617	 21.5

There were 34,742 male and 32,875 female births, being 105.6 to 100 female births, or 51.3 per cent. of all births were males and 48.7 were females.

NATURAL INCREASE PER 1,000 OF POPULATION

			Natural					Natural	
Year	Births	Deaths	Increase	Ratio	Year	Births	Deaths	Increase	Ratio
1917	. 62,666	33,284	29,382	10.6	1922	71,320	34,034	37,286	12.5
1918	. 64,729	43,038	21,691	7.7	1923	70,056	35,636	34,420	11.4
1919	. 62,774	34,010	28,764	10.0	1924	71,510	33,078	38,432	12.5
1920	. 72,511	40,440	32,071	10.7	1925	70,122	33,960	36,162	11.6
1921	. 74,152	34,551	39,601	13.5	1926	67,617	35,909	31,708	10 0

This is the smallest rate of natural increase since 1919.

ILLEGITIMATE BIRTHS

(See Table No. 5)

There were 1.823 illegitimate births, this being at the rate of 26.96 per 1,000 living births.

Year	Males Females	Total Rate	Year	Males	Female	s Total	Rate
1917			1922	823	687	1,510	21.2
1918	726 637 1	1,367 18.2	1923	840	739	1,579	22.5
1919			1924	923	794	1,717	24.2
1920			1925	967	914	1,881	26.8
1921	796 796	1,592 21.5	1926	922	901	1,823	26.9

1921	24.871	8.5	1926	23.632	 7.5

There was an increase of 558 marriages during the year, which was also an increase of 0.1 in the rate.

(See Tables 11 to 17, inclusive, for months, ages, conjugal conditions, nativity, etc.)

DEATHS

During the year there were registered 35,909 deaths, giving a rate of 11.4 per 1,000 of population. This is an increase over last year, the increase being 0.5, being an increase of 1,949 in the actual number of deaths.

TUBERCULOSIS

There were 1,835 deaths from tuberculosis, giving a rate of 58.3 per 100,000 of population. This is still a decrease in the rate, being 1.0.

The following table shows deaths for a decade by ages:

8

DEATHS IN ONTARIO FROM TUBERCULOSIS BY AGES 1917-1926

Year	Total	Ratio per 100,000	0-1	nde	2 2	year 3	-s 	5-9	10-14	15-19	20-29	30-39	40-49	50-59	69-09	70-79	80 and over	Not stated	Total deaths from all causes.

COMMUNICABLE DISEASES

The following table shows the number of deaths and rate per 100,000 of population for the communicable diseases:

	19	17	19	18	19	19	19	920	19	21	19	22	19	23	19	24	19	25	19	26
Typhoid Fever Smallpox Measles Scarlet fever.	252 1 58 59	9.1 .03 2.0 2.1		7.4 .07 3.3 2.9	5	5.0 0.1 1.1 3.4		7.0 1.1 10.4 6.0	24 54	7.2 0.8 1.8 4.9	6 67	6.0 0.2 2.2 4.4	109	7.9 0 1 3 6 5.1	47	3.5 1.5 5.8 5.1	5	4.4 0.1 2.5 4.3	76 5 156 91	2.4 0.1 4.9 2.9
Whooping cough Diphtheria Influenza	228 396 221		335	10.9 11.9 261.3	475	16.5	745	13.0 25.7 113.4	653	10.5 22.2 17.3	411	6.7 13.7 32.2	316	10.4	322	4.7 10.5 18.0		8.7 8.0 32.3	245 227 1588	7.8 7.2 50.4

It will be noted that there is a decided decline in the deaths from typhoid fever, the rate being the lowest in the decade, and, as a matter of fact, the lowest in the history of the Province. This would appear to be an indication of the value of sanitary engineering. The number of deaths from smallpox and the rate are the same as for the preceding year. There was a decided increase in the number of deaths from measles. The rate and deaths from scarlet fever is lowest when it was the same. The rate and deaths from diphtheria is likewise the lowest in the history of the Province. The number of deaths from influenza would indicate that another epidemic swept over the Province, the rate being the highest since the epidemic of 1920.

INFANT MORTALITY

(See tables 1, 2, 2a, 2b, 18 to 24)

During the year 1926 there were 5,302 deaths of infants under one year of age, 52.1 or 3,032 being males and 47.9 or 2,270 females. 22.0 per cent. under one day and a further 19.6 per cent. over one day and under one week. The largest individual cause is premature births which took 29.3 per cent. of all births under one. As is usually the case deaths from diarrhoea exacted the next largest total, the deaths from this disease showing its greatest force in the third, fourth and fifth month. The following table shows the principal causes of death:

	1917	1918	1919	1920	1921	1922	1923	1924	1925	1926

CANCER

The number of deaths from this disease continues to increase, the total number being 3,116 and the rate 99.0 per 100,000 of population, being the highest point reached.

The following table shows the distribution of deaths from the various types according to class as follows:

	1917		19	18	19	19	19	20	19	21	19	22	19	23	19	24	19	25	19	26

MATERNAL MORTALITY

The number of deaths from puerperal causes in 1926 was 381, giving a rate of 5.34 per 1,000 births (including stillbirths), being seven more than in 1925, but with a slight increase in the death rate.

The number of deaths from individual puerperal causes may be found on pages 222-3.

The following table gives for a period of ten years the number of deaths for the Province, City and Town (over 5,000 population) municipalities and for the Province, exclusive of the urban centres.

Note. — In computing these rates, the stillbirths were taken into consideration.

DEPARTMENT OF HEALTH

Forty-fifth Annual Report

OF THE

Department of Health

Ontario, Canada

FOR THE YEAR

1926

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY OF ONTARIO

Ne pereat populus scientia absente

To His Honour William Donald Ross, Esq.,

Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOUR:

I herewith beg to submit for your consideration the Forty-fifth Annual Report of the Department of Health for the year 1926.

Respectfully yours,

FORBES GODFREY,

Minister of Health and Labour.

Toronto, February 1st, 1927.

TO THE HONOURABLE FORBES GODFREY, M.D.,

Minister of Health and Labour.

SIR,—I have the honour to submit for your approval the Forty-fifth Annual Report of the Department of Health, made in conformity with and under the provisions of The Public Health Act, for the year 1926.

I have the honour to be, Sir,

Your obedient servant,

W. J. Bell,

Deputy Minister of Health.

Toronto, February 1st, 1927.

DEPARTMENT OF HEALTH

Minister

HONOURABLE FORBES GODFREY, M.D.

ANNUAL REPORT

OF THE

Department of Health

of the Province of Ontario

For the Year Ending December 31st, 1926

RESUME OF THE TRANSACTIONS OF THE PROVINCIAL BOARD OF HEALTH BY JOHN W. S. McCULLOUGH, CHIEF OFFICER OF HEALTH.

This is the Forty-fifth Annual Report of the Provincial Board of Health for the year ending December 31st, 1926.

The Board held one special and four regular meetings during the year.

The following regulations were passed by the Board and approved by Order-in-Council, viz.:—

REGULATIONS RESPECTING THE PROTECTION OF PERSONS WORKING IN COMPRESSED AIR

- 1. Whenever work is in progress in the construction of which men are employed in compressed air, the person, firm or corporation carrying on the work or the contractor for any part-section or subdivision thereof shall be responsible in all respects for full compliance with all provisions of these regulations.
- 2. Every person, firm, corporation, municipal council or other public authority, shall require as a condition of any contract or sub-contract awarded, accepted or executed in which work of any kind is done by men employed in compressed air, that these regulations be complied with.
- 3. Any person, firm, corporation, municipal council or other public authority, before commencing work in the construction of which men are employed in compressed air, shall notify in writing the inspector appointed to administer these regulations and shall forward to him the plan and specifications of the work to be done.
- 4. The inspector may at any hour by day or night enter upon any land or into any place or building where men are employed in compressed air; may make such examination and inquiry as may be necessary to ascertain whether these regulations are complied with by employers and employees, and may require the production of any record, register, notice or document covered by these regulations.
- 5. The inspector whenever he deems it necessary may take with him into any place where work is in progress in the construction of which men are employed in compressed air, a legally qualified medical practitioner, medical officer of health or sanitary inspector.
- 6. The inspector may make such recommendations in writing as may be necessary for the proper and efficient carrying out of these regulations and the employer of men engaged in work in compressed air shall be responsible for the immediate and proper carrying out of any such recommendations made to him.

- 7. Air, electrical, hydraulic, mechanical, oil, steam and structural equipment, or any part thereof, whether portable or stationary, that functions in any way affecting the persons employed in compressed air shall in every respect be to the satisfaction of the inspector, and the inspector at any time by giving notice in writing to the contractor or sub-contractor shall require that all such equipment in whole or in part be inspected, improved, renewed, repaired or otherwise dealt with for the better carrying out of these regulations.
- 8. The Minister of the Department responsible for the administration of these regulations may authorize any physician attached to the Industrial Hygiene Division, Provincial Department of Health, to undertake such medical examination or inquiry as may be necessary to safeguard and promote the health of persons employed in compressed air.
- 9. These regulations shall be effective on and from the 1st day of September, 1926, and thereafter, and subject to the approval of the Lieutenant-Governor in Council, the Minister may add, alter, amend, change, delete or otherwise deal with any regulation having for its object the better protection of persons employed in compressed air.
 - 10. Hours of Work—Shifts and Intervals.

The working time in any twenty-four hours shall be divided into two shifts in compressed air with an interval in open air.

The maximum number of hours of each shift and minimum open air interval between shifts during any twenty-four hours for any pressure as given in column 1 of the following table shall be as said opposite such pressures in columns 2, 3, 4 and 5, but in no case shall the rest interval taken in conjunction with a meal period be less than one hour.

		Pressure	(pc	oune	ds)				Hou	rs	
		Colun	nn 1					Col. 2 Maximum total	Col 3 Maximum first shift in com- pressed air	Col 4 Minimum rest inter- val in open air	
Greater " " " "	than r " " " "	aormal and 22 lbs. 29 " 34 " 40 " 45 "	l up	"	22 29 34 40 45 50	"	S	8 6 4 3 2 1 1/2	4 3 2 11/2 1	1/2 1 2 3 4 5	4 3 2 1½ 1 34

The limits of hours as herein specified shall apply according to the maximum pressure attained at any time during any shift.

11. Foremen and others specified by the Superintendent of Construction whose presence under air pressure is required for only short periods of time may enter the open air without the usual decompression, but no person shall remain under compressed air at pressures ranging from fifteen pounds to twenty-seven pounds for a longer period than thirty minutes, or for a greater length of time than fifteen minutes at pressures exceeding twenty-seven pounds but less than thirty-one pounds, or leave pressures of thirty-one pounds and over without being decompressed.

- 12. Additional hours of work required on any shift in cases of emergency, both as to the amount of extra time required under pressure and the rate of decompression thereafter, shall be at the discretion of the inspector enforcing these regulations.
 - 13. Decompression.

(a) Except as specified in Regulation 11, no person employed in compressed air shall be permitted to pass from the place in which the work is being done to normal air except after decompression in the intermediate lock as follows:

(b) The stage decompression shall be used, in which a drop of half the maximum gauge pressure shall be at the rate of five pounds per minute. The remaining decompression shall be at a uniform rate and the total time of decompression shall equal the time specified for the original maximum pressure as follows:

(c) Where the pressure is greater than normal and less than fifteen pounds to the square inch, decompression shall be at the minimum rate of three pounds

per minute.

(d) Where the air pressure is fifteen pounds or over and less than twenty pounds to the square inch, decompression shall be at the minimum rate of two pounds per minute.

(e) Where the air pressure is twenty pounds or over and less than thirty pounds to the square inch decompression shall be at the minimum rate of three

pounds every two minutes.

(f) Where the air pressure is thirty pounds or over to the square inch, decompression shall be at the minimum rate of one pound per minute.

(g) After working in pressures of over twenty-two pounds per square inch each workman shall remain on the job for one hour after decompression.

(h) The schedule time of decompression shall be posted in each manlock.

14. The contractor or employer of men working in air chamber shall arrange to keep a record to show the period of staying in air chamber of each person; the time taken for decompression, also notes on any untoward symptoms exhibited or expressed by any man coming out from pressure.

15. Locks and Working Chamber.

(a) Each lock door must be fitted with a glass "bull's eye." The valves and pipes in connection with the air supply and exhaust must be so arranged that the locks can be operated both from within and from without. In caisson work at least two air pipe lines must be connected with each air lock and working compartment.

(b) Man locks shall be large enough so that the men in passing through are not compelled to be in cramped positions. Locks shall be at least five feet in height, and shall contain a timepiece, thermometer and pressure gauge which

accurately show the time, temperature and pressure within the lock.

(c) In the working chamber there shall be installed a portable atmospheric pressure gauge and thermometer placed not more than ten (10) feet away from the working face, also a pressure gauge attached to working chamber side of lock to show pressure in the decompression compartment.

Gauges.

16. When the pressure exceeds seventeen pounds to the square inch where practical to do so, a recording gauge to show the rate of decompression shall be attached to the exterior of each manlock and the dial shall be of such size that the amount of rise or fall in the air pressure within any five minutes shall be readily shown.

17. There shall be on the outer side of each working chamber at least one back pressure gauge which shall be accessible at all times and shall be kept in accurate working order. Additional fittings shall be provided so that test gauges may be attached at all necessary times. Back pressure gauges shall be tested every twenty-four hours and a record kept of such test.

18. A competent man shall be placed in charge of the valves and gauges which regulate and indicate the pressure in the working chamber. He shall not be employed more than nine hours in any twenty-four. In caisson work at no time shall he operate more than two separate air lines.

19. Lighting.

All lighting in compressed air chambers shall be by electricity only. All locks, chambers and tunnels must in addition be equipped with emergency electric torches.

20. Communication.

Suitable means of communication shall be maintained at all times between the working chamber and the power-house and the surface, and wherever possible a telephone shall be installed.

21. Smoking.

Smoking shall not be permitted in the air locks or working chamber.

22. Intoxicating Liquor Prohibited.

No person shall while under the influence of intoxicating liquor enter any compressed air chamber of any building connected with the operation of the same where workmen are employed, nor shall intoxicating liquors be brought into such places.

23. Provided, however, that nothing herein contained shall prevent the carrying of alcoholic spirits or other stimulants into such compressed air chamber or building for medical purposes in accordance with law.

24. Wash and Rest Room.

Facilities shall be provided for washing and bathing with a supply of hot and cold water in a structure maintained at a minimum temperature of seventy degrees Fahrenheit. The accommodation shall be sufficient to provide for changing clothes and to provide for the drying of work clothes.

A sufficient supply of hot coffee and sugar shall be supplied to men working in air pressure exceeding fifteen pounds (at the termination of shifts and during rest periods). The coffee must be heated by means other than direct steam. Coffee containers and cups shall be kept covered and in a clean and sanitary condition at all times.

25. Sanitation and Ventilation.

No nuisance shall be tolerated in the air chamber.

Sanitary containers shall be provided for use when necessary.

The supply of fresh air to the working chamber shall be sufficient at all times to permit work to be done without danger or discomfort.

All air supply lines shall be supplied with check valves and carried as near the face as practicable. The air supply shall be free from objectionable material.

Suitable and sufficient cooling apparatus shall be used to keep the temperature of the air supply to tunnels and caissons moderate at all times.

26. Medical Attendance.

Any person or corporation carrying on any work in the prosecution of which men are employed or permitted to work in compressed air, shall employ one or more suitable and duly licensed physicians whose duty it shall be to strictly enforce the following:

(a) No person shall be permitted to work in compressed air before he shall have been examined by the physician and reported to the person in charge thereof to be physically fit to engage in such work.

(b) In the event of absence from work of any employee for ten or more successive days for any cause, he shall not resume work until he shall have been re-examined by the physician and his physical condition reported to be such as

to permit him to work in compressed air.

(c) No person not having previously worked in compressed air shall be permitted to work in a pressure exceeding seventeen pounds without having first been tested by the physician in the medical lock, nor shall any such person be permitted to work under any pressure for longer than one-half of a day period until he shall have been re-examined by the physician and found to be physically fit for such work.

(d) After any person has been employed continuously in compressed air for a period of two months, he shall be re-examined by the physician and he shall not be permitted to work until such re-examination has been made and he has been reported as physically qualified to engage in compressed air work.

- (e) The employer shall at all times keep a complete and full record of examinations made by the physician, which record shall contain dates on which examinations were made and a clear and full description of the person examined, his age, and physical condition at the time examined, also a statement as to the time such person has been engaged in like employment. These records shall be open for inspection by the inspector charged with the enforcement of these regulations, or by any physician authorized by the Minister of Health and Labour.
- (f) A medical lock shall be established and maintained in connection with all work in compressed air when the maximum pressure exceeds seventeen pounds. Such lock shall be not less than five feet in height and shall be divided into two compartments. Each door shall be provided with a bull's eye and fitted with air valve so arranged as to be operated from within and without. Such lock shall be kept properly heated, lighted and ventilated, and shall contain a gauge, a telephone and cot. Such lock shall be under the control of the physician in charge and there shall be maintained in close proximity a first-aid room, which shall contain a bath tub and all medical and surgical appliances necessary for first-aid in case of accident, and an examining room for the physicians on the work. Where the inspector deems it necessary a separate and independent compressor system shall be maintained in order to ensure the proper use and operation of the medical lock.
- (g) An identification badge shall be furnished by the contractor or employer to all employees advising police officials that the employee is a compressed air worker, stating location of medical lock, and stating that in case of emergency, an ambulance driver shall remove the patient to the medical lock and not to the hospital.
- (h) The records of the physicians on the work, the records of the men in the air chamber, of the time taken for decompression and of any untoward symptoms that have occurred, shall be kept in duplicate, and one copy of these records shall be supplied monthly to the Department of Health of Ontario.
- (i) Adequate medical service shall be available at all times while work in air under pressure is in progress. This service shall be intensified as the pressure is increased.

There was no public health legislation during the year.

F. A. Dallyn, C.E., Provincial Sanitary Engineer, left the service and his position was filled by the appointment of A. E. Berry, M.A.Sc., C.E., Ph.D.

The most important matters dealt with by the Board were water and sewage utilities for which a large number of approvals were given. These as well as other matters are referred to elsewhere in this report.

DIVISION OF PREVENTABLE DISEASES R. R. McClenahan, B.A., M.B., D.P.H., Director J. W. Hunt, M.B., L.R.C.P., M.R.C.S., Acting Director

I have the honour to submit the following report of the work done by the Division of Preventable Diseases for the year ending December 31st, 1926.

1. Epidemiology

Typhoid Fever

The incidence of typhoid fever during the year 1926 has been consistently lower than the average for the five previous years. No outbreak assuming epidemic proportion occurred. Investigations of cases reported with positive Widal reaction from the laboratories, by use of a questionnaire and with the Medical Officers of Health co-operating, showed a large proportion of cases to have originated from the drinking of untreated water. A considerable number also contracted their infection from carriers who were handling food. During the year 44,820 c.c. of typhoid and typhoid-paratyphoid vaccine were distributed for the immunization of those likely to be exposed to typhoid infection. The highest incidence during the year was in the months of September and October, after many had been holidaying in places without properly protected water or milk supplies. The value of protection by previous immunization for those contemplating such a trip is quite apparent.

Smallpox

Smallpox has been much more prevalent this year than for the past previous three years in the province. Fortunately up to the end of the year it has been present in a mild form, but Medical Officers and others are warned that there is no guarantee that the disease may not at any time develop into the malignant type. Vaccination has been widely carried out, 155,000 points being distributed by this department, but in many districts where smallpox is endemic the value of vaccination should be further emphasized and practised more widely. Medica men should acquaint themselves with the more modern technique of acupuncture

Diphtheria

The incidence and mortality from diphtheria throughout the province is much lower for the year 1926 than it has been for the past five years. This may be attributed to two factors. The first factor is the increased use of antitoxin as soon as a clinical diagnosis is made, and the education of parents to call their physician immediately on the appearance of sore throat in their children. The second factor is the increased use of toxoid for the immunization of susceptible children. During the last year Medical Officers and others have organized school and pre-school clinics for this purpose. The efficacy and safety of toxoid are firmly established and splendid work has been done throughout the Province. During the year approximately 48,000 double doses of toxoid were distributed by the department for this purpose.

Scarlet Fever

Scarlet fever for the first half of this year was above the average but has declined during the latter months to slightly below the average. For two years

the department has distributed free scarlet fever antitoxin for treatment and passive immunization, and scarlet fever toxin for active immunization. Scarlet fever antitoxin for the treatment of cases has proven itself of definite worth and has been distributed to the extent of more than 5,500 doses. The small dose of antitoxin for the immediate immunization of actual contacts has also been used in more than 7,500 individuals. The active immunization by use of scarlet fever toxin has been used extensively to the amount of toxin for 11,000 individuals. With these two additions to the armamentarium of the Medical Officer and physician we may expect in the near future a much further reduction in the mortality and incidence of scarlet fever.

Whooping Cough

Whooping cough has been more prevalent during the year 1926 than the average for the past five years. The case fatality rate is high. This is evidenced by the fact that in 1925 the death rate from whooping cough was slightly higher than for diphtheria. Control measures should be directed along three channels. First, in the education of the public, that whooping cough is a serious disease, especially in children under five years of age. Second, the importance of avoiding at all costs the exposure of younger children and infants. Thirdly, by the immunization of contacts by the use of pertussis vaccine. This vaccine was distributed to the physicians of the province to the amount of 65,000 c.c.

Measles

Measles has shown average incidence for the year 1926 with the peak of cases reported during May and June. As yet no satisfactory form of prophylactic product has been developed for the prevention of measles. Research work, however, has been progressing satisfactorily on this continent and in Europe on the discovery of the cause of measles. One fact has been well established, e.g., that blood serum from a convalescent measles case has great value in the temporary immunization of contacts if given before the fifth day of the incubation period. This method of immunization is to be especially recommended for institutions housing young children.

Rabies

No cases of rabies have been reported as occurring in man. However, there have been seventy individuals bitten by dogs who have submitted to the Pasteur preventive treatment during the year. There were thirty-one animal heads examined for Negri bodies with fully 50 per cent. being found positive. The infected regions have been around Windsor, Niagara Falls and the eastern section of the province.

Tuberculosis

Organization has been begun in the establishment of permanent clinic centres which the travelling Diagnostic Clinic for Diseases of the Lungs will visit semi-annually or annually. It is hoped some thirty such centres will be organized during 1927.

Communicable Diseases Reported for the Province by Local Boards of Health for the year 1926.

DIVISION OF INDUSTRIAL HYGIENE

J. G. CUNNINGHAM, B.A., M.B., D.P.H., Director

I have the honour to submit the following report, the work of the Division of Industrial Hygiene for the year 1926.

The health of the wage earner is at least as important to himself as to his employer. In times like these sickness and accident are responsible for at least 75 per cent. of all absence from work. The employer pays directly for accidents—in Ontario to the extent of seven or eight million dollars a year. He pays also for sickness, which causes three to five times as much loss in time as accidents. The wage earner who is sick is usually less effective both for some time before and for sometime after his sickness. When he is absent some one must be secured to take his place. Frequently this is an inexperienced workman whom experience shows to be much more liable to accident and less efficient in the conduct of his duties. Wage earners in Ontario lose about thirty million dollars a year in wages on account of ill health, in addition to all the anxiety and suffering. Occupational diseases are included in this estimate, but it is made up largely of the group of illnesses to which the general population is subjected; for example, colds, bronchitis, pneumonia, rheumatism, and sore throat. About half of the lost time caused by these illnesses can be prevented.

How is the reduction to be brought about? By the application of the same methods as would be used to reduce waste in any other direction:

- 1. To know the materials with which the work is to be done: For the conservation of health this involves the physical examination of employees, not with a view to employing only those who are fit but in order that those with defects will be assisted into suitable work. About 25 per cent. of those employed at the present time could be helped in this way. Periodic examination after employment is even more valuable for the prevention of sickness.
- 2. To use every means to keep the machine running smoothly: Human beings as well as machines require periodic supervision and conditions of work which are conducive to their health. As an instance it has been observed that workers in hot plants suffer from colds, pneumonia, and rheumatism much more frequently than those who work in ordinary temperatures. Where facilities are provided for baths and change of clothing at the end of the shift and these are used such diseases are much reduced in frequency.
- 3. When the first indications of a breakdown appear good management requires that facilities exist for dealing with the situation expeditiously. In the maintenance of the health of wage earners more is accomplished by catching illness in its early stages than by any other one means. Indeed, in the development of a programme for eliminating waste due to ill health this is the first item. It involves bringing the physician and the patient together at the first appearance of symptoms. Experience shows that if the physician is readily available, and not otherwise, the wage earner will seek his advice early; that is, the physician must be brought to the patient. This is a peculiar opportunity which groups of individuals such as appear daily in industries can enjoy. Advice at this time in his illness will indicate whether he may safely return to work at once, or whether he should be placed under active treatment and, if so, what contact he should make.

The number of employers in Ontario who recognize the importance of making medical services for the prevention of sickness readily available to their employees continues to increase. In some but not all cases the arrangement has been made to apply only to those workers exposed to dangerous substances. More development along these lines has taken place in connection with the larger plants but in other places smaller plants have grouped together for similar service with equally good results.

The subject has been dealt with during the year in articles prepared for the newspapers, some general but others dealing with particular aspects of the problem as they are brought to public attention. There have been issued during the year pamphlets for distribution at the Canadian National Exhibition and

articles for publication in trade journals and in magazines.

OCCUPATIONAL DISEASES

A booklet entitled, "Occupational Diseases: A Ready Reference Manual," has been compiled and distributed.

All contacts made through suspected or actual cases of occupational disease, as well as those contacts arising from other activities of the Division are used to point out what can be accomplished in the prevention of general disability.

The types of occupational disease coming to the attention of the Division in the past year have been even more varied than previously. Physicians are using more extensively the facilities afforded by the Division for laboratory and clinical examination of the occupational factor in doubtful cases. occupation in many instances is shown not to contribute to the disability indicates increasing attention to this aspect of their cases on the part of physicians. From the standpoint of the employer, there must be many instances in industry in Ontario where workman and employer alike are suffering at least inconvenience from minor disabilities caused by substances in use in their processes. Frequently it is possible with a little investigation to suggest a practicable remedy by applying the experience of others who may be engaged in a vastly different field of activity. An example will suffice: Workmen using sodium bichromate in the manufacture of glass in Ontario suffered intensely with inflammation of the eyes, face, hands, and mouth. In this instance the inconvenience was sufficient to necessitate absence from work. Improvement in ventilation and the use of a sodium thiosulphate wash completely controlled the situation at negligible expense.

A few of the occupational diseases require special mention:

LEAD

(a) The work among the storage battery plants in Ontario is encouraging. The storage battery industry, which in Great Britain leads all other industries in the number of cases of lead poisoning produced, shows considerable progress in the control of this hazard in Ontario. All the larger manufacturing plants in Ontario have voluntarily made provision for periodic physical examination of workers exposed to lead and for frequent visits to the plant by company physicians, who are using accepted methods for the early detection of lead poisoning. Some cases of lead poisoning still occur in these plants. There have been a few which developed rapidly following some intercurrent illness, for example, influenza, indicating that lead had been absorbed and that it only required a change in metabolism brought about by the intercurrent infection to

throw lead into the circulation and produce symptoms. This shows that the conditions of work are not such as to entirely prevent men from receiving lead into the system.

- (b) Lead mining: In mining lead when it occurs in the form of galena (lead sulphide) the hazard has been considered negligible. A few mild cases of lead poisoning have been reported, however, from this source. Forty-seven complete examinations of lead miners were made during the year showing nine men with mild lead poisoning, eleven men with definite evidence of the absorption of lead but with no indication of disability from this source.
- (c) Ethyl gasoline, advertised as an anti-knock compound for gasoline motors, was placed on the market in Ontario on September 18, 1926. This gasoline contains tetra-ethyl lead roughly in the proportion of one part of tetra-ethyl lead to 1,300 parts of gasoline. Lead in this form is absorbed through the skin. When received into the body in this manner, or by inhalation or ingestion it produces serious poisoning. The hazard exists in its manufacture, in mixing, and in distribution. It is mixed and distributed in Ontario. The mixing operations are carried on under enclosed conditions with strict medical supervision of the workers employed in this operation. In its distribution two groups of workers are exposed to the lead hazard: (1) Workers at gasoline filling stations; (2) garage workers employed in repairing motors in which ethyl gasoline has been used. Workers at these points of hazard are being observed with a view to determining whether the conditions of work are safe.

Silicosis

Silicosis is a condition of the lung tissue in which damage has taken place as the result of the inhalation of finely divided silica dust. The particles of silica causing the damage are less than ten microns (1/2500 of an inch) in size, such as are produced by drilling and blasting in mining and quarry operations in rock containing silica. The particles of silica after chemical changes produce this damage. The injured portions of the lung are thrown out of use. When this has progressed disability results. In addition, tuberculosis attacks such a lung more readily and development of the disease under these conditions progresses more rapidly.

During the past two years the Division, working with the Tuberculosis Division of the Department, has conducted a survey of the mines and quarries in Ontario to determine the extent to which silicosis is being produced in these industries.

During 1926, 1,040 miners in the different mining camps in Northern Ontario were given a physical examination, with X-ray examination. The amount of silica in the rock varies in the different camps, and, as was to be expected, the number of cases of silicosis developing in the different camps varies also.

In April, 1926, the Workmen's Compensation Act of Ontario was amended, defining silicosis along the lines of the Act Relating to Miners' Phthisis in South Africa. Since that time the Division has received from the Workmen's Compensation Board reports of ninety-seven cases of silicosis in its different stages which have been compensated.

Considerable attention has been paid to the prevention of this condition. Obviously, the most desirable method for control lies in the collection of this fine silica dust, which is formed during mining operations, before it permeates the air which the men breathe. Up to date this has been found to be impractic-

able. Free use of water in the drills, at the points of blasting and on the rock surfaces, together with good general ventilation has done much to reduce the hazard but has not succeeded in eliminating it.

It has been necessary to choose with care men entering employment of this kind to eliminate those who have any abnormal chest condition which will favour the development of silicosis, such as tuberculosis, chronic bronchitis; and to examine all men employed underground at intervals in order to eliminate as early in the disease as possible any who show its effects or those who may have contracted tuberculosis, the former for the benefit of the miner himself and the latter to avoid the spread of tuberculosis to others.

During the year arrangements have been made by the Porcupine mine operators for these examinations. In the Kirkland Lake, Cobalt, and Sudbury camps arrangements for the same purpose are receiving careful attention.

The findings on physical examination and X-ray examination of miners exposed to silica related to gross and microscopic lung and heart findings at autopsy is of the greatest importance as a guide in the interpretation of the effects produced in the living subject. In a few instances it has been possible to obtain autopsy material from cases previously examined, but no opportunity should be lost to repeat this.

Local experience, in common with experience elsewhere, shows that a few men working exposed to silica may show considerable lung change within five years and less, while other men with fifteen years' exposure of similar intensity will show little or no evidence of the disease. Results of work along these lines might conceivably alter the whole scheme of prevention.

Caisson Disease

The amount of work carried on in the province under compressed air is increasing, necessitating investigation of conditions under which this work is being done. This investigation showed that work of this nature involving the use of higher pressures than have been in use locally has been carried on elsewhere with very little trouble, but that the work is hazardous and requires strict supervision. Of prime importance in this connection is the length of hours in relation to the pressures in use and the strict adherence to what has been determined as the safe length of time to be occupied in coming from under the different pressures to the atmosphere. These essential features for the prevention of the condition, along with many others—important but not vitally so—have been included in a code of regulations which was drafted and incorporated in legislation and placed with the Department of Labour for enforcement.

Caisson disease has also been added in Schedule 3 of the Workmen's Compensation Act to the list of diseases for which compensation is paid. The Division has received reports of fifty cases and three deaths from caisson disease which have been compensated under this arrangement. Under the new conditions there have been very few cases and these of a mild nature. With effective supervision this should continue; nevertheless, the Division is maintaining an active interest in the question.

NICKEL RASH

The report of the investigation of nickel rash has been published. As the preventive measures in small electro-plating rooms depend mainly on improved ventilation, occasion to bring about this improvement is withheld pending the results of other investigations in ventilation which are being conducted by the Division.

FURUNCULOSIS AND INFECTED INJURIES FROM CUTTING OILS AND COMPOUND

At the request of the executives of a large plant working iron and steel, Dr. D. T. Fraser, Assistant Director of the Connaught Laboratory, undertook for the Division to determine the antiseptic properties of a well-known disinfectant to be used with cutting compound and cutting oils. It was determined that this disinfectant was effective in concentrations which were practicable for cutting compound and slightly less satisfactory for cutting oils. The plant reports that for the six months ending December 31, 1926, "in no case have we had an infected injury to anyone who has been using a cutting oil or compound mixed with the disinfectant."

VENTILATION

The report on the investigation into ventilating conditions in a large pulp and paper plant referred to in last year's report has been completed. This report shows that ventilating conditions in the paper machine and grinding rooms were not good. The examination of the few men available showed some effects from these conditions. Recommendations for improvement in the grinding room were made. In the paper machine room it was suggested that conditions could not be improved unless the process was separated from the general ventilating system.

After inquiry into the situation obtaining generally regarding ventilation in the large pulp and paper plants of north western Ontario, which showed that conditions varied considerably from plant to plant, these observations are being continued in another pulp and paper plant.

A number of cotton and wool plants were visited to determine how far the processes necessitated work under conditions of high temperature and humidity. The conditions appeared to be very much better than those which might be expected from reports of these industries in Great Britain; so that in the meantime none of this work is being done in this industry.

An investigation is proceeding to determine whether any relation exists between the ventilation of school rooms in two schools in Hamilton, as indicated by thermometer and katathermometer readings, and the incidence of respiratory diseases among children at three seasons of the year, fall, winter and spring.

Infection of Injuries

The Division has made little general progress in the reduction of the amount of infection of industrial injuries. Contact is maintained with certain plants where adequate facilities for dealing with the problem have been instituted. The results in these plants could hardly be more striking than it is and yet the cost of infected injuries under Workmen's Compensation continues to be very high. This infection can be controlled by the provision of adequate first aid facilities with supervision and the enforcement of the rule that all men receiving a break in the skin must report for first aid treatment; for example, a plant previously notorious for the number of infected injuries, employing 800 men for the year 1926, among 1,472 cases of injury had only seven infected cases, which caused a lost time of sixty-eight days and a cost of \$285.

FUMIGATION

Six visits have been made to Northern Ontario to different large operating companies to instruct picked men in the use of cyanogen chloride for the fumigation of bunkhouses. The method is very effective but dangerous, and all precautions have been taken to ensure that the work will be done in a safe manner. Cyanogen chloride has a tear-gas effect, which serves as a warning and is thus safer to deal with than hydrocyanic acid. When correctly handled it is effective in destroying parasites and bacteria.

INDUSTRIAL WORK IN UNORGANIZED TERRITORY

Report of the work of the Sanitary Inspectors by Mr. White, Provincial Sanitary Inspector, shows how closely this work was related to industry. In the past year, by arrangement with the Ontario Pulp and Paper Safety Association, this work has included an effort to reduce the amount of disability and cost arising from infected injuries in woods operations. The results so far have been gratifying.

DIVISION OF CHILD HYGIENE J. T. PHAIR, M.B., D.P.H., Director

During the year 1926, the Division activities have largely been centred on the more sparsely settled portion of the province. In doing this it was felt that the advantages of such service as is available, should be first extended to the districts which find it difficult to supply it for themselves. Practically the entire nursing staff have therefore been operating in Northern Ontario. Four of them being assigned to District VII; three in District VIII; four in District VI; and two in District IV. This work has been much appreciated by the local authorities, and has been extremely fruitful in terms of results accomplished.

The supervision of the School Health Service, both in the centres in which this work is under the control of the local school boards, and in those in which the control is vested in the Board of Health, of necessity occupies a very definite amount of the time of the central office staff.

The increasing number of such municipalities and the difficulty in obtaining well-qualified nurses to fill the appointments thus created, necessitates a large amount of instruction being given those occupying such positions. This work is of sufficient importance, however, to warrant the time so spent.

There are now ninety-seven municipalities operating a full-time School Health Service, in twenty-four of which a physician is definitely associated with the work. In sixteen of these the school work done is part of a general public health nursing programme, and in each of these the actual medical examination of the children is done by a physician.

Diagnostic clinics were held during the year in the following centres: Renfrew, Barrys Bay, Bruce Mines, Thessalon, Blind River, Matheson, Leamington, Simcoe, Beaverton, Gravenhurst and Wallaceburg.

The time of the field medical staff has been largely spent in the physical examination of school age children. Dr. Cockburn, who had been employed in the James Bay district, severed her connection with the Department during the year. This was to be regretted, as Dr. Cockburn was doing an extremely useful and more or less unique piece of work among the isolated settlers in the extreme north.

The Division has continued to maintain the closest co-operation with the Department of Education, supplying such medical service as has been requested from time to time, by the Inspector of Auxiliary Classes.

DIVISION OF SANITARY ENGINEERING A. E. BERRY, M.A.Sc., C.E., Ph.D., DIRECTOR

I have the honour to transmit herewith report of the activities of the Sanitary Engineering Division for the year 1926.

Mr. F. A. Dallyn, Provincial Sanitary Engineer since the inception of the office in 1913, and directly in charge of the development and various activities of the Division, left the service in March to enter the field of consulting engineering.

During the past year the various activities of the Division, together with new works, have been carried on, and included the following:

Review of all waterworks and sewerage plans; research and investigations; supervision of all municipal water treatment plants, sanitary surveys and reports; inspection of tourist camps and highway refreshment booths, etc.

WATERWORKS AND SEWERAGE EXTENSIONS

The tabulated list of extensions, alterations, etc., in waterworks and sewerage is attached herewith, and shows a total estimated expenditure of \$27,026,609.39 on these works approved during the year. This includes the issue of 473 certificates of approval.

During the year five new sewage disposal plants of the activated sludge type were put into service. These included Cochrane, East York Township (Todmorden-Greenwood plant), St. Thomas, Peterborough and London (south end).

In the water-treatment field filters were put in operation at Welland, Essex Border (Windsor), St. Catharines, Belle River and Rouge Hills. Chlorination was also applied for the first time at Belle River, Rouge Hills, Ignace, Erie Beach, Owen Sound and Crystal Beach.

Supervision of Water Supplies:

The Division has continued its supervision of municipal water supplies through periodic inspections by engineers. By this means the operators are enabled to exercise efficient control over the treatment process. Ortho-tolidin and colour standards are supplied by the Department. These inspections reveal many instances where alterations in treatment are necessary for best results.

Sanitary Surveys:

Sanitary surveys were made during the year in the following twenty municipalities, making a total of 177 since this work was instituted in 1920. This information is set out in Table No. 1.

TABLE No. 1 SANITARY SURVEYS, 1926

The information collected in these surveys continues to prove valuable to both the municipalities and the Department. The maps show at a glance points of sanitary significance in the municipality, and the reports indicate how these conditions may be improved.

Tourist Camps and Refreshment Booths

In order to cope with the increasing problem of sanitation in tourist camps and highway refreshment booths, minimum requirements for approval were adopted by the Government. These standards do not prohibit the operation of any camps or booths, but provision is made to issue approvals to those which come up to these standards. During the season inspections were made by the district officers and engineers on all the camps and booths in the Province. Nearly 350 camps were inspected, and of these only forty received approval. This is a low percentage, but will undoubtedly be increased as the standards and their significance become better known to the operators and the travelling public. Similarly 620 refreshment booths were visited, and fifty-five received approval.

In future it should be possible to give greater publicity to this programme, and to show the tourists the advantages of patronizing these camps and booths only.

The standards adopted are as follows:

Motor Tourist Camps

Minimum Requirements for Approval by the Department of Health of Ontario

The following standards for motor tourist camps shall apply as a minimum for the granting of approval, in all parts of Ontario.

Definition.

A motor tourist camp shall be considered as any area set apart for the accommodation of motor tourists and operated with or without charge.

Certificate of Approval.

All camps in which camping facilities are found, by the authorized inspector, to comply with these standards shall be given a certificate of approval, signed by the Honourable the Minister of Health and countersigned by the inspector. The authorized inspector shall be the District Officer of Health or some other officer or officers of the Department appointed for the purpose.

Registration.

At every approved motor tourist camp a register shall be kept in which all guests remaining over night shall be registered, specifying the date of stay and home address, and such register shall be open for inspection.

Supervision.

Every approved camp shall be under continuous supervision of an attendant who shall exercise every reasonable effort to keep the camp in a clean and sanitary condition, to maintain conventional conduct, and to afford every reasonable protection to those using the ground or equipment for camping purposes.

A list of approved motor tourist camps will be kept by the Provincial Department of Health, and will be open to the public and available for reference.

Site.

Every approved motor tourist camping ground shall be located on a site that is well drained and not in an environment prejudicial to health.

Camping Space.

Sufficient camping space shall be provided to avoid overcrowding.

Water Supply.

Every approved motor tourist camp shall be provided with an adequate water supply from a source which meets the requirements of the Provincial Department of Health. Where a supply from an approved municipal source is not available, water may be obtained from properly protected wells, springs or other sources approved by the Provincial Department of Health. The supply shall be readily available for camp use, and shall be clearly placarded as the camp water supply.

Sewerage.

If a municipal water supply or a private water supply under pressure is available, flush toilets may be provided having suitable means of disposal. Where no such water system is available, chemical toilets with buried containers or privies may be used. The chemical toilet shall be emptied and recharged with suitable caustic solution as necessary. Privies shall be fly proof and of the approved pail type, using pails of heavy galvanized iron, or in a dry sandy location, pit privies, at least six feet deep, may be permitted. The sanitary conveniences must, under no circumstances, be located so as to provide any possible danger to the camp water supply.

Sanitary Conveniences.

Sufficient toilet accommodation, properly designated, shall be provided in each camp for each sex.

Care of Sanitary Conveniences.

All seats in sanitary conveniences shall be thoroughly scrubbed daily with suitable soap or alkali solutions. Each pail or pit privy shall be provided with a scoop and receptacle of half bushel capacity containing dry earth, ashes, sand,

sawdust or other absorbent material. Instructions shall be posted in the privy requesting the use of this material, and the supervisor of the camp shall cover all exposed material in the container at least twice each day. All privies shall be equipped with self-closing tight-fitting doors, fly-proof seats, and provision for removing the contents by raising the seat-boards. The designation and screening of sanitary conveniences shall be subject to the approval of the inspector.

Nightsoil.

Nightsoil from all pail privies shall be removed daily and suitably disposed of either by incineration, dumping into municipal sewers or buried in narrow deep trenches, eighteen inches to twenty-four inches deep, and twelve inches wide. The deposited material shall be immediately covered with earth to a depth of at least nine inches.

Refuse.

Covered water-tight metal receptacles shall be provided in convenient locations for depositing refuse and camp litter. All refuse shall be collected daily and buried, or burned and buried. Sand traps shall be provided for the reception of the contents of kettles and other moist wastes. Burning of refuse shall be in an incinerator at least eighteen inches in diameter, with the grates raised at least six inches off the ground.

Lighting.

All sanitary conveniences in camps shall be properly lighted from dusk until dawn.

Cooking Facilities.

Where cooking facilities are provided covered garbage pails shall be available, and where facilities are enclosed the building shall be adequately lighted, ventilated and screened against flies and shall be kept clean.

Laundry.

Laundry operations shall not be carried on in natural waters adjacent to camp.

Bathing Facilities.

Where bathing facilities are provided and the depth of current in the water is such as to require it, suitable warning signs shall be posted and life-saving appliances shall be provided. Warning signs shall be posted adjacent to diving boards indicating the depth of water.

Cancellation of Approval.

Any certificate of approval for a motor tourist camp shall be issued only for the current year, and shall be subject to cancellation at any time for non-fulfilment of these requirements.

These standards, passed by Order-in-Council and approved by His Honour the Lieutenant-Governor, to become effective on and after July 8th, 1926.

Refreshment Booths

Minimum Requirements for Approval by the Department of Health of Ontario Definition.

A refreshment booth shall include any restaurant, tea room or other stand where food and refreshments are offered for sale.

Meats.

No meats other than canned goods shall be sold or offered for sale either in sandwiches or other forms, except where adequate refrigeration is maintained.

Milk

Milk shall be sold only where refrigeration is maintained, and the temperature of the milk shall at no time exceed 50° F. The Department recommends the use of pasteurized milk in sealed containers.

Soft Drinks.

No soft drinks shall be made up or sold on premises not having an approved source of water supply.

Serving Containers.

The use of glass or china containers or serving dishes shall be permitted only where approved arrangements for washing are used. The Department recommends the use of sanitary paper cups and utensils. Suitable receptacles with drainage shall be provided for the liquid contents of slop pails.

Protection of Containers.

Cones, straws and paper utensils used in the serving of food or refreshments shall not be exposed to flies or dust at any time, and no cone, straw or paper utensil shall be re-used. The screening of refreshment booths from flies is urged by the Department of Health.

No person suffering from any communicable disease, including the common cold, shall continue to serve in any such refreshment booth, nor shall any contact from communicable disease serve in a refreshment booth during the period of quarantine for such disease.

Certificate of Approval.

All refreshment booths in which facilities are found by the authorized inspector to comply with these standards shall be given a certificate of approval signed by the Honourable the Minister of Health and countersigned by the inspector.

Cancellation of Certificate.

Any certificate of approval for a refreshment booth shall be issued only for the current year, and shall be subject to cancellation at any time for non-fulfilment of these requirements.

These standards, passed by Order-in-Council and approved by His Honour the Lieutenant-Governor, to become effective on and after July 8th, 1926.

ANNUAL REPORT OF REGISTRAR GENERAL'S BRANCH S. J. Manchester, Director

The Registrar General's (Vital Statistics) Branch has had an active year. Approximately 170,000 registrations of births, deaths and marriages were received, checked and indexed for reference.

During the year some 57,521 official certificates were issued. Some 61 per cent. of these, or 17,245, were issued for emigration purposes and the balance, 39 per cent., or 22,691, for other purposes where proof of age or citizenship was

required.

Besides these official certificates about 4,200 certificates were issued for Mothers' Allowances purposes; about 750 in connection with the Adoption Act; for the Federal Immigration Department about 700; for the D.S.C.R., some 350; for the Soldiers' Aid Commission about 100; and for other purposes such as insurance, athletics, etc., about 40,100. Besides these, searches were made for local police authorities and other references of which no account has been kept, involving altogether something between 56,000 and 58,000 searches.

The Branch registered about 7,000 births by declaration which had not

previously been registered.

Over \$83,000 was received as net revenue.

The Statistical Report of Births, Marriages, and Deaths is issued under a separate volume and may be had on application to the Department.

DIVISION OF DENTAL SERVICES F. J. CONBOY, D.D.S., Director

Disease is on a daily rampage. Millions of men, women and children suffer from it and thousands of our best citizens are the victims of preventable diseases. Health workers are, however, carrying on a valiant battle against this common enemy and the most cheerful phenomenon in the recent history of civilization is the progress in the knowledge of preventive medicine and its application in social practice.

One of the most important advances in this connection has been the discovery of the relationship between areas of infection in a localized part of the body and general ill health. It is now known that a number of the degenerative diseases that cause the death of so many people of middle life have their inception in these so-called focal infections. Recent investigation has proven that abscesses at the ends of the roots of teeth and pyorrhea pockets may be numbered among the most common locations for primary infection and from these areas, bacteria and poisons enter the circulation and are carried to some other part of the body where they set up a secondary lesion. It was for the purpose of combating this enemy of public health that the Division of Dental Services was organized and the results achieved during the past year have more than justified its existence. Our work consisted chiefly in the dental health education of the people and the establishment of free dental services for those who could not pay regular dental fees. Our efforts have been enthusiastically received and well supported.

A number of new school clinics have been organized during the year and several hospitals have established small dental departments. Factory workers have had dental examination and services have been started in orphanages and homes. The dental survey begun last year was continued and arrangements made so that itinerant dentists would visit the outlying districts.

The dental health educational work was promoted in a most aggressive manner. The dentists in all parts of the province volunteered to give illustrated lectures to audiences of school children and their parents and to address meetings of women's institutes, service clubs and other such organizations. The motion picture films were in great demand and the dental plays were used frequently.

The mouth health educational campaign culminated in the Ontario Dental Health Day, held on October the 20th.

The Ontario Dental Health Day was organized by the Ontario Department of Health for the purpose of bringing to the attention of the people the harmful results caused by diseased mouth conditions, and informing the public, so they may be in a position to assist in connection with the prevention of dental diseases.

The Department found the various health, educational and social welfare organizations quite willing to assist, and the following agencies lent their active co-operation: The Ontario Medical Association, The Ontario Dental Association, The Canadian Dental Hygiene Council, The Registered Nurses' Association of Ontario, The Red Cross Society (Ontario), The School Health Section of the Ontario Educational Association, The Imperial Order Daughters of the Empire, The Ontario Social Hygiene Council, The Ontario Retail Druggists' Association, The Home and School Clubs, The Women's Institutes, The Service Clubs, The Toronto Film Board, The Radio Stations, The Ontario Retail Merchants' Association, The Dental Dealers, The Manufacturers of Mouth Health Products,

The Churches, The Young Men's Christian Association, The Young Women's Christian Association.

We also enjoyed the support of the majority of the newspapers and a number of magazines.

The activities arranged included:

1. MOTION PICTURES IN THEATRES AND TOWN HALLS

The Ontario Motion Picture Bureau provided two hundred and twenty-five prints of a special Ontario dental health film. The scenes for the picture were prepared and staged by the Toronto Department of Health, and the prints were distributed by the various exchanges through the Ontario Motion Picture Distributors. By this arrangement the necessity of providing heavy metal boxes (as required) for shipping these films was obviated. They were sent by the exchanges to the theatres as part of the weekly consignment.

The Ontario Motion Picture Bureau also provided five regular length standard and six Pathescope size films. These, with a number of standard and Pathescope pictures in the possession of the Department of Health, enabled us to supply programmes for matinees and public meetings. All the large theorems in the Previous should the second of the provided theorems in the Previous should the second of the provided theorems.

theatres in the Province showed the special film.

2. Radio Messages

A radio message was broadcasted from each radio station in Ontario and from four in the United States. In Toronto, the people who listened in, heard talks on dental health on five consecutive nights, three messages were sent out from Hamilton and a number from Ottawa. London, Brantford, Preston, Prescott and Bowmanville were other centres from which messages were sent.

3. Public Addresses

Special speakers were provided for service clubs, women's institutes, home and school clubs, church organizations, and other groups. Talks were given in ops and factories and public meetings held.

4. Work in Schools

Each teacher in the public and separate schools gave a mouth hygiene lesson. Special booklets (Dental Guide) containing modern material on the subject were given to the teachers. Essay and art competitions were held and prizes given. The high school students were addressed by dentists. The public school inspectors co-operated in a most enthusiastic manner, and members of the profession addressed the Teachers' Institutes, which met a few weeks before the Health Day in order to inspire the teachers to give their best co-operation to the campaign.

5. THE DENTAL PLAY: "A BAD BABY MOLAR"

Forty-five sets of scenery for this play were sent out to different parts of the province. The set consisted of a copy of the play, a large picture of the face, the patterns for the teeth, instructions for the preparation of the scenery and a photograph. The large paintings of the face were painted by a local artist. The paper was then cut into sections and the whole enclosed in a suitable folder. The play was presented at mass meetings of school children held in the afternoon and to parents' meetings in the evening.

6. Free Dental Examination and Advice

The dentists of the province supplied free dental examination and advice, including instruction in mouth hygiene to all who requested this service on Dental Health Day. In the larger centres special clinics were organized while in the smaller places the dentists received the people in their own offices. Besides giving this service, the members of the profession made a dental survey of forty thousand children. Free X-ray pictures were taken for the patients in the larger clinics.

7. Co-operating Agencies

One of the most encouraging features of the Ontario Dental Health Day campaign was the spirit of co-operation on the part of lay organizations. The insurance companies prepared and distributed interesting and instructive dental health folders to their policyholders. One company sent out one hundred thousand of these booklets. Letters requesting the local branches of the various organizations to have a part in the effort in each municipality were sent out by the provincial officers of the service clubs, Imperial Order Daughters of the Empire, Women's Institutes, home and school clubs, and others. The United Church of Canada sent a communication and booklet to each minister in Ontario, and the Presbyterian Church rendered valuable assistance. The local committees found it easy to get the assistance of the local branches when they had received such a communication from their own executive officers.

8. General Publicity

The general publicity was provided by posters, automobile stickers, newspaper advertisements placed by manufacturers and distributors of pure food articles and mouth toilet preparations, dental health articles in the press, attractive window displays and slogans on sign boards. The only difficulty experienced in connection with the whole campaign was to get the support of some of the newspapers. They felt that they should be paid for publicity of this kind. Nevertheless newspaper articles, prepared by the Department, appeared in the vast majority of the papers.

9. GOVERNMENT DEPARTMENTS AND OFFICIALS

The Ontario Department of Health had the support and assistance of the other branches of service in arranging for this undertaking: the Department of Agriculture, through the Women's Institute Branch and district representatives, the Department of Education, through the public and separate school inspectors, and the Teachers' Institutes, and then the other divisions of the Health Department. The plan was worked out so that a new body of workers would be put at the task at different times as the undertaking progressed, the dentists, physicians, nurses, social welfare workers, school teachers and medical officers of health being brought in in turn, and thus a helpful interest was maintained throughout the entire campaign.

10. Preliminary Arrangement

From the standpoint of real dental health education we are convinced that the work done in organizing the effort is just as valuable as the Dental Health Day activities. The thousands of letters sent to the leaders in the various walks of life, the addresses given at conventions, and all the work done to secure support, must do much to promote better dental health, and even the dentists who were

called upon to give public addresses will profit by the study they gave to the subject of Mouth Hygiene. Fifty-five sets of slides and twenty sets of charts were sent to members of the profession to assist them in presenting the subject of Dental Health to the people.

All the activities arranged for the Ontario Dental Health Day were of an ethical nature. We made no effort to stage a big show, but carried through the arrangements in a quiet, dignified way. At the same time we organized the work so that our dental health message would be presented to all classes of our citizens. The Department is glad to know that in this province-wide effort they enjoyed and still have the confidence and support of the professions and organizations interested in the health and education of the people.

It was felt by all those interested in the Ontario Dental Health Day that we should make an earnest effort to get permanent benefits from the results of this campaign. Consequently, a number of conferences have been held between the various dental organizations and the Division of Dental Services of the Department of Health. The concensus of opinion seems to be that the Department of Health should accept responsibility for public dental health education and that free dental treatment should be under the control of the profession of dentistry. Much can be done to protect mouth health if the programme for the prevention of dental diseases can be presented to the people n a convincing manner. The Department of Health has the organization for doing this work efficiently and with the co-operation of the dentists, success is assured. Booklets, slides, films and displays of different kinds must, of course, be purchased but the benefit which the public will derive from this educational work will more than compensate for the expense involved.

Dental health education in itself is not sufficient. Preventive dentistry includes oral prophylaxis and the correcting of defects. Many people are unable to pay for this service and some form of free dental service must be provided. The dentists of the province have offered to give their time gratuitously to operate community clinics in the hospitals, and if sufficient financial assistance can be secured to enable the hospitals to supply the equipment and material, many such departments will be organized during the coming year. The school population in many of our rural centres is too small to justify the establishment of a school clinic and the hospital service seems to be the ideal way of supplying dental treatment for the people of all ages who require assistance of this kind.

Starting out on the New Year we are glad to report that we look forward with confidence to the expansion of the work and to future accomplishments which will bring a larger measure of health and happiness to the people of Ontario.

DIVISION OF PUBLIC HEALTH EDUCATION

LITERATURE

During the year literature was distributed as follows: 10,016 Baby Books, 4,000 Bulletin No. 9, 13,000 Communicable Disease Pamphlets, 15,000 Proper Care of the Teeth, 20,000 Health Almanacs; grand total, 73,016.

Ontario Health Officers' Association

Ontario Health Officers' Association met in their twelfth annual conference, 243 registrations being made. The Canadian Public Health Association and the Canadian Social Hygiene Council met at the same time. The result was a most satisfactory programme. The guests of the convention were Professor C. E. A. Winslow, of Yale University, President of the American Public Health Association; Professor Haven Emerson, Professor of Public Health Administration, Columbia University; and Dr. George E. Vincent, President of the Rockefeller Foundation. The following executive was elected: Honorary President, Honourable Dr. Forbes Godfrey; President, Dr. T. W. G. McKay, Medical Officer of Health, Oshawa; First Vice-President, Dr. W. J. Cook, Medical Officer of Health, Sudbury; Second Vice-President, Professor James Miller, Director Branch Laboratory, Queen's University, Kingston; Secretary, M. Power, Provincial Department of Health.

CANADIAN NATIONAL EXHIBITION, TORONTO

The Ontario Government Building was formally opened and housed the exhibits of the various departments, the Public Health Section being in the western half of the main wing in a space 150 feet long by 42 feet wide.

The Division of Sanitary Engineering designed a model tourist camp in miniature and a sample refreshment booth, together with wall exhibits on milk, water and flies.

The Division of Dental Services undertook dental examinations (including X-rays where necessary) and a total of 1,000 people availed themselves of this service.

The Division of Child Hygiene confined its activities to the distribution of literature and the showing of an interesting map of Healthland.

The Division of Industrial Hygiene emphasized graphically the advantage of adequate health examination in industry in contrast with the heavy load of cost resulting from lack of attention in this respect.

The Division of Vital Statistics designed their display to attract attention to the matter of birth registration.

The Division of Preventable Diseases co-operated with the Division of Laboratories in a very fine exhibit. X-ray films showing (a) normal lungs, (b) diseased lungs, (c) healed lesions, were most popular and shows that the public generally is very interested in tuberculosis.

For the first time the Department did not maintain a motion picture exhibit, but health films were shown in the small theatre, together with those from other Government departments.

FALL FAIRS

Assistance was rendered in connection with fall fairs in the following centres:

FAIRS AND EXHIBITS

May 17th	. Toronto	Ontario Dental Association Annual Meeting.
May 31st to June 5th	. Hamilton	. Produced-in-Canada Exhibition.

HEALTH FILMS

The report of Mr. E. H. Jones follows.

The following is a list of places where films and exhibits have been shown by the Department during the year 1926, also a memorandum of the attendance in each place.

1926	Place	Auspices	Atten- dance	School children
Jan 3	Toronto	Jewish Girls' Club

DIVISION OF LABORATORIES . C. M. Anderson, M.D., C.P.H., Director

I have the honour to submit the following report and tabulated statements of the work of the Public Health Laboratories for the year 1926.

TABLE I.

Table showing number of specimens examined at the Main Laboratory and at the eight branch laboratories, throughout the Province for the year 1926.

Sections of the Laboratory	Toronto	London	Ottawa	Sault Ste. Marie	Kingston	Ft. William	Peterboro	North Bay	Owen Sound	Total
(a) Bacteriology Diphtheria cultures Tuberculosis: Sputum. Typhoid bloods Typhoid feces. Suspected rabies. Gonorrhoea. Water colon bacilli & counts. Milk plate counts. Miscellaneous bacteriological examinations.	6,054 2,471 746 54 30 3,136 2,967 426 560	3,220 1,319 949 67 1 1,146 1,065 1,330	847 232 3 1,627 2,925 1,257	3,148 1,800	576 245 477 588 141	1,177 135	340	1,046	246 322 40 369 644 	18,650 6,974 2,503 128 31 9,343 14,821 5,827 2,743

TABLE II.

Table showing the total specimens examined at all laboratories during the years 1911, 1924, 1925, 1926.

Laboratory at	1911	1924	1925	1926
Toronto	5,750	40,872	69,607	61,312
London		14,546	25,261	27,405
Ottawa		12,397	13,669	21,818
Fort William		6,199	5,499	6,165
North Bay		6,186	3,542	3,674
Kingston		5,725	7,651	7,353
Peterboro		4,518	4,201	4,185
Sault Ste. Marie		4,419	7,889	7,529
Owen Sound		2,117	2,311	1,856
Total	5,750	96,979	139,630	141,297

TABLE III.

Table showing outfits, vaccines and chemical products supplied during the years 1923, 1924, 1925 and 1926 from the Main Laboratory.

Outfits Sent Out	1923	1924	1925	1926
Syphilis (Wassermann)	20.336	29,220	41,455	31.770
Gonorrhoea	4.611	5.000	4,142	7.125
Water	3.180	2.906	3.578	2.518
Diphtheria	12.882	14,652	15,611	9,691
Tuberculosis	6.859	4.396	6,216	6,230
Typhoid	3.491	3,547	2,197	2,551
Blood sugar		766	1,429	2,090
aeces		332	212	376
Total	51,359	60,819	74,840	62,351
Vaccines and Chemical Products Typhoid monovalent vaccine, cc	30.515 40.742 23,660 10,577	26,661 51,385 25,471 13,235	$ \begin{bmatrix} 17,750 \\ 12,940 \\ 61,890 \end{bmatrix} $ $ \begin{bmatrix} 29,470 \\ 12,892 \end{bmatrix} $	44,820 65,370 29,135
Mercury salicylate, grs	10,577		6,556	11,217 22,858
Mercury salicylate, grs			6,556	

From examination of the above tables the following points should be noted:

1. That the total number of specimens examined by all laboratories of the Department during the year was 141,297.

2. That the total number of diagnostic outfits prepared by the staff of the Main Laboratory was 62,351.

3. That there was an increase of 37.36 per cent. in the work at the Ottawa branch laboratory.

A short summary of the activities of the different sections of the Division of Laboratories follows:

I. Bacteriology

(a) Diphtheria Cultures.

Swabs coming into the central post office were again collected daily at 4 o'clock and brought to the laboratory for culture.

Direct smear examinations were made on all new cases for diagnosis. On any swab showing morphologically typical diphtheria bacilli, the result was wired or telephoned to the physician within an hour of receipt of the swab.

Swabs from new cases on which direct smears were made	1,619
Total number of new cases showing diphtheria bacilli on direct smear	13
Total number of new cases negative on direct smear, but positive on culture	234
New cases negative on both direct smear and culture	1,312

From the above figures, it will be seen that we were able to give the physician an immediate diagnosis in 23.89 per cent. of the swabs which contained diphtheria bacilli.

Four hundred and sixty virulence tests were made upon guinea pigs to determine whether organisms found in cultures were toxin-producing diphtheria bacilli. Virulence tests are performed on cultures from patients who have been more than four weeks in quarantine, on contacts and suspected carriers harbouring diphtheria-like bacilli. This practice prevents a patient from being in quarantine any longer than is absolutely necessary to safeguard the public health.

(b) Typhoid Diagnosis.

The laboratory distributed two types of outfits:

1. A glass slide on which a drop of patient's blood is placed and allowed to dry.

2. A container with a small tube in which 3 to 5 c.c. of patient's blood

is placed.

The second method, though not used as extensively as we had hoped it would, offers many advantages, chief among which is that:

An accurate dilution can be made of the serum from 1-20 up to 1-640 and the exact dilution agglutinating typhoid or paratyphoid organisms can be determined.

(c) New Blood Culture Outfit.

We have prepared a new outfit in which physicians desiring a blood culture may submit a sample of the patient's blood to the laboratory for culture.

The outfit consists of two glass vials, each containing 35 c.c. of liquid media; 4 c.c. of the patient's blood are drawn into a sterile syringe; 2 c.c. are placed into each vial of media by puncturing the rubber cap of the vial, previously swabbed with tincture of iodine. The vials are placed in a wooden container and mailed to the laboratory.

The advantage of this outfit is that organisms will survive longer in the media during transit than if the blood were placed into a plain sterile glass tube. Thus the laboratory may be able to aid the physician in making a diagnosis. We feel sure that this outfit will be of value to physicians.

(d) Rabies.

During the year we examined thirty animals' heads for Negri Bodies of Rabies. Of this number there were 28 dogs' heads, two horses' heads and one cow's head.

One cow's head, one horse's head and nine dogs' heads showed the presence of typical Negri Bodies of Rabies.

(e) Miscellaneous Specimens.

During the year we examined 560 miscellaneous specimens. This number consisted of culturing swabs taken from abscess formations, spinal fluids for organisms present, specimens of pus for culture and guinea pig inoculation, blood cultures, pneumococcus typing and the preparation of autogenous vaccines.

(f) Preparation of Bacterial Vaccines.

At the main laboratories the following bacterial vaccines were prepared:—

(1) Typhoid Monovalent Vaccine.

This vaccine contains 1,000 million dead typhoid bacilli per cubic centimeter.

(2) Typhoid-Paratyphoid Vaccine.

This vaccine contains:

B.	Typhosus		 1,000	million	per cc.
В.	Paratyphosus	"A"	500	"	٠ ۲
В	Paratyphoene	"B"	 500	"	"
1).	r araty phosus	D	 500		

The reaction following the administration of the combined vaccine is more severe than with the monovalent vaccine on account of the greater toxicity of paratyphoid organisms. As paratyphoid fever is negligible in Ontario we consider that the typhoid vaccine will give sufficient protection.

(g) Pertussis or Whooping Cough Vaccine.

This vaccine contains 4,000 million Bordet's bacilli per cc.

During the past year we distributed 6,537 10 cc. vials of Pertussis or Whooping Cough Vaccine, which amounted to 358 vials more than the previous year.

Each bottle of vaccine bears the serial number and the date after which the vaccine should be discarded.

H. Serology

The number of specimens of blood and spinal fluid submitted to the Iaboratories for the Wassermann reaction showed an increase of 1021 specimens over any previous year.

During January, 1926, Wassermann tests were begun as a routine in the Ottawa branch laboratory and the records show that 3,793 such examinations were made to December 31st. This has relieved the increasing pressure of this work from the central laboratory.

Physicians in Ottawa have not failed to advise us of their appreciation of this additional service and their satisfaction in the results of the tests performed by Dr. Letts.

Kolmer's method has been made a standard test at the laboratories at Toronto, Kingston, London and Ottawa.

III. CHEMISTRY.

The accompanying table shows the amount of work conducted in the Chemical Section of the Division of Laboratories during 1926. For purposes of comparison the work for the year 1925 has been included.

I. Number of samples analyzed:		
•	1925	1926
Milk		437
Blood sugar	534	1,175
Liquor: 1. For alcohol	. 3,123	3,292
2. For medicinal ingredients	. 34	19
Chemical waters	20	47
Coal		556
Urine		171
Miscellaneous	43	45
Mercury Salicylate Suspension: 1. Number of ampoules	9,019 12,892	7,421 11,217
Bismuth Hydroxide Suspension:	2.222	
Number of ampoules. Weight in grains.	2,230 6,556	6,681 22,858
Silver Nitrate Ampoules	29,470	29,135
For Administration Service: 1. Ounces of Sterile Distilled Water		20,677 2,414

In addition to the above the Chemical Section prepared the colloidal gold solution, distilled water, both ordinary and ammonia free used by the Bacteriological and Serological Sections. There was also a research conducted to obtain a means of preventing fermentation in fermentable liquors between the time of seizure and analysis.

The table indicates that during 1926 there was quite a marked increase in the number of blood sugar determinations and the amount of bismuth hydroxide suspension distributed, otherwise the work differed little from the previous year.

DISTRICT OFFICERS OF HEALTH

DISTRICT No. 1.

T. J. McNally, M.D., D.P.H.

I have the honour to submit the following annual report for this district which comprises the counties of Lambton, Essex, Kent, Elgin, Oxford and Middlesex, composed of sixty-eight townships containing twenty-nine villages, twenty-four towns and six cities, each having its local board of health regularly appointed according to The Public Health Act, except that in "Essex Border," five municipalities are served by one local board.

In several other instances the same medical officer acts for more than one municipality, so that in all there are three full time and 102 part-time officers in the district.

During the year a close personal supervision has been exercised over the public health administration in each of the municipalities entailing to each an official visit to review with the local officer the work of his board and where necessary with the full board.

In many municipalities repeated visits were required to assist in correction of nuisances, to urge improved water supply, to obtain better supervision of milk supply, to assist in the control of communicable diseases and in some instances to endeavour to trace the source of typhoid fever.

Transportation has been almost wholly by motor car in which I have travelled about fifteen thousand miles during the year.

FREE INSULIN

On instructions from the Department, I made a personal investigation of the financial standing of each of the recipients of "Free Insulin," sixty cases scattered throughout the district. A special report was made of the findings in each case, also recommendations to prevent exploitation of the Department.

MOTOR CAMPS AND HIGHWAY BOOTHS

In conjunction with Mr. Johnston, of the Engineering Division, a careful and thorough inspection was made of all these camps (seventy) and booths (eighty-one) in the district.

Four camps and four booths were found to comply with the regulations of the Department and were given official certificates of approval. About fifteen hundred miles were covered in making this inspection.

Some improvement over conditions the previous year was noted but it appears evident to me that more than inspection and recommendations will be required to bring the lower type of these institutions into a reasonably clean and sanitary condition.

PUBLIC HEALTH NURSING

This work has been well demonstrated by Nurses Riddle and Bagshaw, in Petrolia and Wallaceburg during the year, followed up by chest and children's clinics, conducted by your divisional medical experts and concluded by close follow-up work by the nurses.

A demonstration is now being given in Strathroy by Miss Riddle, while Mrs. Bagshaw concludes the follow-up work in Wallaceburg. Your district officer has given considerable attention to arranging for and conducting these demonstrations and clinics and in giving every possible assistance in the difficulties encountered by the nurses.

Chest clinics have also been conducted at Ingersoll and Chatham in conjunc-

tion with the local medical practitioners.

Nuisances

The effluent and conditions at the Essex Canning Factory was the only

cause of complaint from these industries during the year.

The piggery of Mr. Judge, in London Township, and of Mr. Griffith, in Westminster Township, occasioned several complaints and took up considerable time endeavouring to have conditions corrected without any apparent success in the latter case.

The Canadian National Railway shipping yards at Parkhill have also occasioned several complaints and, although their road master agreed that they did not comply with the regulations and that he would recommend their removal to a new site, no action had been taken when I later inspected them.

Drains, cess-pools, polluted ditches and garbage dumps have been the cause of many special trips during the year, but in every case correction has

been made where the complaint was justified by conditions.

MILK SUPPLIES

These supplies are being more carefully supervised in the towns and cities by the local boards each year, but much educational work remains to be done in the rural and smaller urban centres.

MEAT SUPPLIES

Local supplies in the smaller towns and villages receives little if any supervision beyond inspection of the slaughter house and shop.

RURAL SCHOOLS

The annual inspection by local medical officers is gradually improving the sanitary surroundings of these institutions, but much remains to be done before even the large proportion are reasonably satisfactory in regard to lighting and seating.

EDUCATIONAL

The Dental Health Day and addresses in connection therewith were well received and I believe have stimulated the public to exercise better care of their teeth and improved oral hygiene.

The local officers are continuing to address the pupils on personal hygiene

and related subjects, when making their annual inspection.

By Little Mother's Leagues and home nursing classes your nurses are doing

splendid educational work in addition to their regular visits.

Your district officer has as frequently as possible by public addresses and at council and board of health meetings endeavoured to interest public leaders in our work of preservation of health and prevention of disease.

COMMUNICABLE DISEASES

SMALLPOX

The few cases of this disease in the district this year have been mild and isolated, but every endeavour is being made to have vaccination carried out in the case of school children.

DIPHTHERIA

The use of toxoid for the permanent immunization of non-immunes and children against diphtheria is being constantly urged on local authorities especially where the disease makes its appearance in a community.

Dr. F. Adams, medical officer of health for the Essex Border Municipalities, has done excellent work along this line and several other local officers have also been administering toxoid, though not so extensively.

VENEREAL DISEASES

The clinics established by the Department are serving a very useful function in clearing up indigent cases as well as having a very good educative influence on the public mind concerning the menace of the diseases.

SCARLET FEVER

This disease though appearing in mild form has occasioned many special trips to different municipalities to assist the local authorities in its control. Frequent use has been made of the serums supplied by the Department for the treatment of this disease and for passive immunity with apparently satisfactory results.

MEASLES

Reported cases are being quarantined in practically all municipalities but many cases are not officially reported hence are not isolated.

Tuberculosis

The chest clinics being conducted by the Department and in conjunction with the sanatoria are doing excellent work in obtaining early diagnosis and treatment. This work is expensive but is amply justified in its reduction of the incidence of the disease, the lessened mortality as well as the wonderful educative influence it is exercising on the public as shown by the number of cases being presented at every opportunity.

Typhoid Fever

Courtright has had the only outbreak in the district this year and was occasioned by the break-down of the waterworks chlorination plant and the careless and unbelievers not heeding the warning to "Boil the Water."

Isolated cases have occurred at several points but mostly rural, though in many cases reported from the hospital where the case is being cared for in town or city.

RABIES

An outbreak of this disease occurred in Essex County and illustrated very emphatically the advance of public health measures in Ontario during the last few years. Formerly, patients after being bitten by a rabid animal had to be taken to New York and kept there at considerable expense during treatment, while in this outbreak the four persons bitten were treated with free anti-rabic inoculation at home by their family physician.

As this outbreak of the disease was spread over two townships it occasioned considerable work on the part of the local authorities as well as your district officer before it was finally cleared up. Several dogs and hogs and other domestic animals succumbed to the disease.

WATER SUPPLIES

All public water supplies are being regularly supervised by the Engineering Division as well as by the local board and the district officer, so are kept in a safe condition all the time or the public warned if any contamination occurs.

SUMMER RESORTS

These are being supervised each year not only by the local boards but by the district officer, yet conditions in some of them are far from ideal. I feel very strongly that some form of licensing should be required where these are conducted for profit.

RECOMMENDATIONS

- 1. That a full-time engineer be attached to each district office whose work would be under the supervision of the Division of Sanitary Engineering.
- 2. That a full-time stenographer be attached to each district office and that all vital statistics and disease reports come to the district office directly from the local authorities.
- 3. That additional nurses be attached to each district, if possible one for each county, part of this additional expense to be borne by the county.

DISTRICT No. 2

J. J. Fraser, M.D., D.S.O.

I beg to submit herewith the report of the work done in District No. 2 for the year 1926.

It is interesting to note as the years pass, how, as it were, the centre of gravity of health activities changes. In the early days abatement of nuisances was the main function of a board of health. Then control of communicable diseases took first place. This was followed by the supply of pure water and clean milk. Then came child welfare and the prevention of communicable diseases by active immunization. To-day, one of the problems pressing for solution is that of maternal mortality. Some definite plan will have to be formed to cope with this problem, such as more pre-natal clinics, education of the expectant mother, etc.

COMMUNICABLE DISEASES

Although we can offer the public reasonable immunity from smallpox, typhoid, diphtheria, and scarlet fever, these contagions still occur. But they

do not occur in mass epidemics as formerly. During the last year I do not recall one instance where any of these infections reached what might be called an epidemic form. While these results have been achieved with the help and cooperation of the public, they can only be maintained by constant vigilance on the part of the whole health machinery of the province.

SMALLPOX

Cases occurred at the following places—MacTier, Kitchener and Orillia-At MacTier, which is a divisional point on the Canadian Pacific, one case occurred in a railway employee. The day I arrived there, I found the health officer vaccinating all the school children. At Kitchener sporadic cases occurred throughout the winter. Through the vigilance of the M.O.H., aided by a little force, these were kept within bounds and 3,500 children vaccinated. At Orillia, a man suffering from supposed grippe was admitted to hospital, and remained two days. Fourteen days after he left, the man in the adjoining bed developed smallpox. Four patients and two nurses contracted the disease. All contacts were isolated and vaccinated. As this same institution suffered an outbreak of typhoid, six patients and four nurses, last year from a patient with biliary fistula, they realize the need of vaccinating and inoculating all nurses and attendants in the hospital.

Турноір

There were a few isolated cases throughout the district. The Owen Sound outbreak of last year was brought to a test in court, and the city adjudged responsible, through the water supply. The corporation, the Utilities Commission, and the local board of health were held equally to blame.

MEASLES AND SCARLET FEVER

Fewer cases of these have occurred than last year, all of a mild nature.

DIPHTHERIA

Of diphtheria there were 134 cases and seven deaths. This is very creditable, considering the totals for the province of 2,818 cases and 179 deaths. There have been a considerable number of immunizations by toxoid, but none on a large scale. Some municipalities propose doing so next year.

VENEREAL DISEASES

More work has been done this year than heretofore. Four of the five cities are now doing intensive work in venereal disease control. Wherever a system of reporting and treatment has been established, the great need for such work very soon becomes apparent. As the system of reporting and follow-up work is developed, better results still may be looked for.

WATER SUPPLIES

The water at Huntsville, which is chlorinated, began to show the presence of B. Coli. On investigation it was found there was a leaky valve in the chlorinator. The local board of health, which was called together, promised to keep a close check on the analyses, and to have the health officer take the samples.

Reports of the water at Southampton began to show "unsatisfactory." The intake pipe is located between the mouth of the Saugeen River and the bathing beach. The lowering of the levels in the lake has left the intake in very shallow water. The council decided to call in the services of a firm of sanitary engineers with a view to extending the intake.

Owen Sound has installed a chlorination plant to chlorinate all its water supply. Since that time the reports of the analyses have shown the supply free from contamination.

TOURIST CAMPS AND REFRESHMENT BOOTHS

A more clear cut distinction was observed this year between those that were good and those that were not. About one-third of those inspected were approved. This is better than last year, when not more than half a dozen came up to requirements. A sample of water was taken at each camp. I think this should be done more than once in the season. The greatest single factor in making a safe attractive camp would seem to be supervision. This supervision should be by one man, not left to the Ladies' Aid or the Kiwanis Club.

While motor camps are increasing every year, refreshment booths seem to be falling off in number, which is not to be deplored.

SUMMER RESORTS

Sanitary conditions at the summer resorts were again carefully gone over. There were only two or three complaints received during the whole season, and these were local and easily remedied. The problem was again stressed that the large hotels in Muskoka look carefully into the question of chlorination of the water. I would suggest that the Department prepare a pamphlet, showing the most effective way of doing this at a reasonable cost.

The question of sewage disposal at the Georgian Bay resorts, where the formation is of rock, is being taken up with the Georgian Bay Association.

At Wasaga Beach the township council had plans drawn for a public lavatory which is much needed, but there was some dispute about the location, no one wanting it located near his place. It is hoped to have this settled in time to begin work early in the spring.

The Bruce Peninsula is developing into a resort for summer tourists, via the Blue Water Highway. There is a good motor road from Wiarton to Lion's Head; if this could be extended to Tobermory it would help the northern end.

The inspection of summer camps for boys and girls is assuming larger proportions every year. An important question here is the supervision of the food supplies, especially as some of them are now operated for financial gain.

MILK AND MEAT

That the problem of good clean milk is still a live question is evidenced by the fact that so many municipalities ask assistance to improve their supply. Among those who have sent such requests are: Shelburne, Hespeler, Elmira, Wiarton, Palmerston, Listowel and Stratford.

The point is emphasized of getting clean milk at its source, hence more attention is being given to stables, utensils and milkers. A small town cannot afford a pasteurizing plant but many are insisting that their supply come from

tuberculin-tested herds. Guelph and Kitchener have appointed specially qualified milk inspectors, trained at the Ontario Agricultural College.

A number of municipalities are looking for a workable meat by-law. Some

are using the Federal Meat and Canned Goods Act.

Nuisances

A new type of nuisance has arisen in the form of fox farms. So long as they were kept in the rural districts there was no trouble, but when they started to spring up in towns, they began to cause annoyance. The only redress at present is through a civil action against the owner. The condition will probably correct itself in time, as breeders are finding out the town is not an ideal place to breed animals not fully domesticated.

HEALTH ACTIVITY

The outstanding place in the district in health activity for the year was the City of Guelph. They increased the salary of the health officer, so that it now compares favourably with other cities of equal size. They have given for the use of the local board an office in the city hall, with a full-time man to do the secretarial work. They have employed a public health nurse and have now the Victorian Order nurse, the school nurse and the public health nurse working in co-operation.

The local board has shown much increased activity in venereal disease control, and have under consideration the opening of a pre-natal clinic. In the early part of the year, the M.O.H., assisted by the physicians of the city, made a survey of the school children for goitre and tonsils, examining 5,018 children. Two years ago the expenditure for health was twenty-three cents per capita, this year it was 46.2 cents.

What results have been obtained from this increased expenditure? It is too early as yet to estimate the value received, but it is significant that while the death rate last year was 14.13, this year it is 12.67. The number of communicable diseases last year was 1,331, this year 365. This lends support to the statement, that given a certain amount of money and spending it judiciously, one can almost guarantee fewer deaths and less disease.

DISTRICT No. 3.

D. A. McClenahan, M.D., D.P.H.

With the close of the year 1926 and the advent of 1927, I am beginning my fifteenth year as District Officer of Health for District No. 3. There has, I am sure, been a gradual but marked improvement in health activities during that period. Education of the public mind as to the importance of preventive medicine has been a great factor in the improvement along public health lines. The public is realizing now as never before that public health matters include not only the prevention of disease, but also the promotion of good health and the prolongation of life. One notable advance has been the establishment of a Provincial Department of Health under the direct control of a Minister of Health. As in other departments in the government the Minister is assisted by a Deputy Minister. With the present health organization in this Province

and with loyalty and team work on the part of the various officials and employees of the department, I look for great advances in public health achievement during the next ten years.

EPIDEMIOLOGY

No serious epidemics have occurred in my district during the year. We had some fifteen cases of scarlet fever in Oakville in February. Dr. Stead and I suggested to the board the advisability of putting in a nurse to assist the school nurse in checking up on suspicious cases in the school and referring them to the M.O.H. In this way three or four cases were found who were attending school and were still infective. The isolation of these cases speedily brought the epidemic to a close.

Scarlet fever cases occurred in St. Joseph's Hospital, the Ontario Hospital and the Sanatorium, all of Hamilton, and also in the hospital in Dunnville. With the prompt measures taken only one case occurred in the Ontario Hospital, in the Sanatorium and in the Dunnville Hospital. I am of the opinion that all nurses and attendants at hospitals and like institutions should be vaccinated against smallpox, protected against typhoid fever, and actively immunized against diphtheria and scarlet fever.

A case of cerebro spinal meningitis occurred in a pupil of one of the schools in Saltfleet Township, Wentworth County. We took swabs of the throats and noses of all pupils in the school and also the teachers. No carriers were found. A nurse was put in the school for ten days to inspect the pupils every morning. No subsequent cases occurred. I am very much indebted to Dr. Deadman of the Hamilton City Hospital laboratory and also to Dr. Greene, M.O.H. of the township, for their invaluable assistance in connection with this case. Sporadic cases of other communicable diseases have occurred during the year.

PUBLIC HEALTH EDUCATION

To my mind a very important function of the District Officer of Health is the education of the public. This we have endeavoured to carry on by public meetings, where the health pictures from the Department were shown, by addresses at these meetings, and by addresses at meetings of Boards of Education and Boards of Health. We have still another duty to perform and that is the education of the medical profession. I think the time has come for the practising physician to turn his attention more and more to the preventive side of medicine. This does not mean that their remuneration would be less, rather it means that the remuneration would increase, because if they can prevent people from becoming ill, these people are much better able to pay them because their efficiency and earning power is not impaired. Prevention, I am persuaded, is the medicine of the future and the medical profession would be well advised to prepare for it. What we are asking them to do is to recommend strongly to their patients to come to them and have themselves made immune to smallpox, typhoid fever, diphtheria and scarlet fever. This is, I believe, in the interests of their patients and in their own financial interests. Too much stress has been laid on the fact that it is the function of the doctor to relieve suffering and not enough on the fact that it is his function to prevent suffering.

EDUCATION OF THE DISTRICT OFFICERS AND OTHER PUBLIC HEALTH WORKERS

In 1926, I attended the Health Congresss held at Toronto in May and also the American Public Health Association meeting at Buffalo in October. These were very important and helpful meetings and I am grateful to the Minister and Deputy Minister for making possible my attendance at these functions which do so much to keep up interest in the work, and enable one to find out how others in public health work meet and overcome difficulties in public health administration under conditions similiar to our own.

MEDICAL AND NURSING SERVICES

The taking over of these services by the Department of Health was, I think, a notable step forward. A number of municipalities in my district, about ten I believe, have taken up the scheme of medical and dental inspection. In no instance where it has been established has there been any falling off but all are continuing the work and seem to be well satisfied with the service they are getting. North York has the distinction of being the first rural municipality in the province, so far as I know, to undertake this service. There are a few municipalities which would, I think, be well advised to go into this work, but so far we have been unable to convince them that it is in the public interest. This work has been greatly facilitated in my district by practical help and advice from Dr. J. T. Phair, Director of Child Hygiene.

During February, I accompanied Dr. J. G. Cunningham, Director of Industrial Hygiene, in calling on the local medical practitioners in Thorold and Merritton, to let them know that Miss Heeley was engaged in nursing work in some of the industrial plants there and to ask their co-operation in the work the nurse was trying to do.

NUISANCES AND UNSANITARY CONDITIONS,

Complaints regarding the above have been investigated at Acton, the Hunt Club, Barton Township, Grimsby Park, Port Dalhousie, Streetsville, Grimsby, York Downs Golf Club, Markham, Jordan, Stamford Township and Nelson Township. The number of complaints about nuisances is steadily diminishing, and this is I think encouraging because their correction is either a police function or an engineering problem.

IMMUNIZATION AGAINST DIPHTHERIA

I have spent a good deal of time on this phase of preventive medicine during the past year, and have had a large amount of success in carrying it out. In my district the parents are very responsive in their co-operation and are deeply gratified to the Provincial Department for undertaking the work. I am trying to bring the opportunity of having the children rendered immune to diphtheria to the door of every parent in my district. After having done that if there should be cases of diphtheria and fatalities from it, then I think the Department and I have cleared ourselves of all responsibility. In addition I am asking the family physician, when the matter has been introduced into a neighbourhood, to carry on the work and recommend their patients to bring their children to them for immunization.

My plan is to first get the co-operation of the Board of Education, then send letters to all parents telling them what we are aiming to do, and asking their consent to have their child or children immunized, and then do the work on an

appointed day at the schools. This service is free to the parents as the toxoid is supplied free by the Department and the local board of health provides the alcohol and absorbent cotton. The local medical officers of health do a great deal of the work themselves, and my thanks are due to them for their splendid co-operation.

The inmates of the Boys' Industrial School at Mimico were immunized during the year. There are about 250 inmates. I wish to acknowledge able assistance in this work from Dr. Baxden, Dr. Roberts, Dr. Snyder and Dr. Hunt.

Tourists' Camps and Refreshment Booths

During the summer of 1926 I accompanied Mr. A. V. Delaporte on an inspection tour of all tourist camps and refreshment booths in District No. 3. We inspected 134 tourist camps and 402 refreshment booths. On our first visit a copy of the requirements for approval was given to the operator. The regulations were carefully explained, and the improvements required in that particular place were pointed out. A second visit was made in about three weeks. In those cases where interest was shown, but when all the necessary improvements had not been made, a third visit was made. A total of about 1,500 inspections were made. On our first visit only two motor camps and six booths were approved. On our second visit five camps and sixteen booths were approved. On a third inspection two camps and two booths were approved. The total approvals were nine motor camps and twenty-four refreshment booths.

Some of the operators of camps and booths were quite anxious to co-operate and improve conditions, but the vast majority were rather indifferent. The main objection to the camps and booths is the quality of the water supply. Leaving out the places which had municipal supplies, seventy-five per cent. of the remainder had bad water. This is due nearly altogether to the lack of protection of the supply. Wells can be made safe with very little expense.

We believe that publishing the names and location of the approved camps would help to arouse the interest of the owners and operators and teach them that it is bad business to operate a camp that cannot get the approval of the

In submitting my fourteenth annual report for District No. 3, I acknowledge with the deepest gratitude the co-operation and consideration which I have uniformly received from the Honourable the Minister of Health, the Deputy Minister of Health, Dr. W. J. Bell, and the directors of all the divisions

in the Department.

DISTRICT No. 4

N. H. SUTTON, M.B., D.P.H.

I beg to submit my report for District No. 4, for the year 1926.

In reporting on my work, I would gratefully acknowledge the spirit of helpfulness and co-operation which has been shown by most of the Medical Officers of Health. This has made possible the very considerable advancement which has occurred during the year. The calls from these local authorities become more numerous and varied each year, consultations, assistance, advice, direction, etc., being requested.

COMMUNICABLE DISEASES

Smallpox of a mild type has been the most prevalent, and has appeared in some thirty municipalities in seven counties of my district. Where it has appeared, it has yielded only to prompt and efficient action in isolation of the cases, quarantine and vaccination of the contacts, and as general vaccination of the populace as could be secured.

The vaccination of the school children under Section 13 of the Act was the most effective single step in general vaccination. Several splendid pieces of work were done by local M.O.H.'s in this line. At the head of this list, I would place the achievement of Dr. H. A. Turner, M.O.H. of Millbrook and Cavan, who secured the vaccination of every school child and of very large numbers of the younger and older members of the population in both municipalities. Dr. Mather of Tweed was not far behind and his work in Elzevir township was specially arduous. The list also includes the M.O.H.'s of Murray township, Havelock village, Marmora and Deloro villages, North Monaghan and Smith townships, while others also did good and effective work.

It is regretted that the same success has not been attained in the city of Peterboro, where this disease obtained a foothold early in the year and is still going strong. Section 13 of the Act was not invoked, but the Board of Education through its physician, offered free vaccination in the Public Schools and attained a fair measure of response. The number of cases reported does not at all represent the number of cases that occurred, as the disease has thus far been of such a mild type that the public have been indifferent to its presence and many cases did not call a doctor at all. Thus the disease has spread directly and indirectly to other nearby municipalities.

Belleville and the surrounding area are, at the end of the year, wrestling with this disease. The M.O.H. of that city, by offering free vaccination in the schools, has immunized over two-thirds of the school children. He is now preparing to enforce Section 13 of the Act. Sidney township is doing the same.

Farther north, smallpox is invading the edge of the sparsely settled lumber and pulp wood area of Hastings and Peterboro counties. Control there is going to be difficult, and the constantly shifting lumbering population offers great facilities for the spread of the disease through a very wide area.

Of the other communicable diseases, measles and chickenpox have been the most in evidence and appeared in the most places. During the winter, measles overran Trenton and caused three deaths among young children. Chicken-pox has been prevalent in the south-western part of the district and is now spreading to the east and north, where in many places it is now closely following up smallpox. When these two diseases are present at the same time, the difficulties in diagnosis are great. That chicken-pox is not always the mild disease that it is generally regarded as being, one case which I saw will show. The case showed a very slight cruption but very severe involvement of the liver, bile passages and pancreas. The child ran a fairly high temperature, was greatly jaundiced, and for some days was unable to retain any nourishment because of nausea and vomiting. When I saw her, the abdomen was rigid and so tender that the slightest touch could not be endured. She ultimately recovered, however.

Scarlet fever has not been much in evidence and since the advent of the antitoxin has lost much of its terror. The year's experience has proved out this product thoroughly and the verdict is that it is even more effective than diphtheria antitoxin.

Diphtheria has not been much to the fore; such cases as have occurred have been sporadic and not epidemic in character.

Of much interest was an outbreak near Lindsay of a disease which resulted fatally in all the four cases in which it occurred. Thorough investigation, including the autopsy of one case, showed it to be epidemic encephalitis. No further cases have occurred.

MILK SURVEY

During the winter and spring I continued the survey of the milk supplies in the various municipalities. The unfavourable weather and roads in the spring did not allow this being completed before the animals were again out on pasture. Thus a true picture of the production conditions could not be obtained and the survey was discontinued for the season. In the late autumn, owing to pressure of other work, but little progress was made and the survey will be continued in the spring of 1927.

While it is yet too early to draw many conclusions, the survey so far has made one thing stand out, i.e., the necessity for stricter supervision of pasteurizing

plants.

Tourist Camis and Refreshment Booths

Following the milk survey work, the inspection of these camps and booths was undertaken. In this I had with me Mr. Ball of the Sanitary Engineering Division. We found a very great increase in numbers and especially is this true of refreshment booths. A few camps which had been started last year were found to have been discontinued this year, but many more new ones had been established. Several of these were obviously in the nature of experiments, to see whether the business justified itself and in these arrangements were primitive and far from satisfactory. In some, the location chosen was poor for business and worse for sanitation. As a rule, the municipally established camps were fairly satisfactory, but at that we were only able to issue less than one-half dozen approvals, with card and banner. The water supplies of all these camps were tested and in the privately owned camps, very few supplies were found good, while in many the sanitary arrangements were scarcely up to even pioneer standards. Among the booths, also, it was mostly water supplies and sanitary arrangements which prevented approval being given. As far as the articles for sale were concerned very few minor changes, such as protection of goods and utensils from flies, were necessary to bring them quite up to standard. I came very definitely to the conclusion that the desire to earn the approval display card is not sufficient incentive to bring the privately owned concerns up to the mark, but that they will have to be definitely regulated and authority provided to close those which are found to be a menace to health.

BOYS' AND GIRLS' SUMMER CAMPS

These are becoming increasingly numerous and are most desirable institutions, but the conditions under which they now originate are in dire confusion. There is nothing to prevent any man or organization getting together a group of children or young people and establishing a camp, wherever arrangements can be made with the owner of the land, without the location being known to any authority. In the work of inspecting these camps therefore, one is reminded of the old recipe for rabbit pie which began, "first catch your rabbit."

Every year we find some of these Fresh Air Camps the previous existence and location of which was entirely unknown either to myself or the M.O.H. of the

municipality in which they were located. I am quite prepared to believe that there are others about the district of which I still know nothing. I would accordingly recommend that any individual or organization desiring to conduct a fresh air or summer camp for boys, girls or adults should notify such intention to the Ministry of Health, together with such particulars of the proposed camp as may be necessary. In that way, both the location and conduct of the camp can be so controlled as to get the greatest benefit to health, while avoiding the dangers of faulty location, equipment, etc.

SUMMER RESORTS

These were again inspected as usual and improvements generally found. Those catering to the public, such as summer hotels, I can definitely regulate and insist upon proper sanitary conditions, but I would again recommend that groups of private cottages be brought under proper regulations. At present there are some of these groups where the cottages are more closely placed than are the houses in the residential parts of urban centres and where the sanitary arrangements and water supply are those of almost pioneer days. I submit that such conditions are a danger to health, instead of tending to the improvement of it.

During the summer I sampled the water of the Kawartha lakes and rivers in the summer resort area and found continued improvement. While at this, the official motion picture expedition was filming the Trent waterway and included this work in the film, which is to be used in U.S.A. picture theatres in aid of the tourist business.

RED CROSS OUTPOSTS

During the year I have seen two of my dreams come true, in the establishment of an outpost hospital in North Hastings at Bancroft and of a smaller outpost at Apsley in North Peterboro. As I have worked for the establishment of such facilities there for some three years, this development has been most gratifying. The need for them was very great and when a hospital is established in the Village of Haliburton, I shall consider that the needs of the northern part of my territory in this line are pretty adequately met.

LARGER SANITARY WORKS

The year has seen the bringing into operation of the Peterboro Sewage Disposal Plant, after a long period of working to this end. As the year closes, the town of Picton is making a definite effort to secure a proper and safe water supply. It is to be regretted that this step was not taken before the paving of the principal streets, but this will not add too much to the difficulty of the undertaking.

DISTRICT NO. 5

P. I. MALONEY, M.D.

I have the honour to submit herewith my annual report for District No. 5 for the year 1926. District No. 5 is made up of the counties of Dundas, Stormont and Glengarry, Leeds and Grenville, Frontenac, Lennox and Addington,

Lanark, Renfrew, Carleton, Prescott and Russell and the city of Kingston. The district outside of the city of Ottawa has a population of about 350,000 people.

The office in the city of Ottawa has been increasingly used during the year as a source of information, advice and instruction, by personal consultation,

by letter, and by telephone.

The outgoing correspondence has exceeded two thousand letters.

The district has been thoroughly inspected during the year in a routine manner, besides the special work later referred to.

All the public institutions, over forty in number, have been inspected as to their sanitary condition, and a report sent to the Department and, where indicated, to their governing bodies.

The request for elimination of unsanitary conditions or for the installing of sanitary improvements have generally been promptly met by those in charge of the management.

Tourist Camps and Summer Resorts and Way-Side Restaurants

For 1926 the Department made tentative regulations governing these places. Any of them coming up to the standard laid down were given a card or banner which they could post up or display, on which was printed a statement to the effect that they were approved by the Department. Some hundreds of these places were inspected by Sanitary Engineer Dillane and myself, and I was able to grant certificates to five tourist resorts, and seven way-side restaurants.

It was realized that this inspection was largely educational and it is fully expected that next year there will be a marked improvement, when perhaps certain of the regulations may be made obligatory.

Besides the usual summer resorts, summer camps were conducted at Golden Lake and Britannia by Y.M.C.A., Ottawa Boys' Club at Mink Lake, Boys' Club at Christie Lake and private establishment, Camp O'Conto, conducted by Miss Halliday near Sharbot Lake.

Previous to inspections by Mr. Dillane and myself, the local M.O.H. and sanitary inspectors were reminded of their duty as to supervision of these resorts, and in almost every case they were under constant supervision during the whole season.

HEALTH CLINICS AND PUBLIC HEALTH NURSING ACTIVITIES

Miss Squires, following her work in Kemptville, conducted an excellent demonstration during the winter months at Gananoque, with the result (always hoped for but seldom accomplished) that the council engaged a permanent public health nurse for the town. Miss Squires, already so well and favourably known in this end of the province, added to the laurels she already received for her work during the Glengarry health week and elsewhere. Miss Squires went to Northern Ontario for the summer months.

Miss Howie, who with Miss Squires had been working in the vicinity of Kemptville for some time and whose work was well received, was highly complimented at a large public meeting in Leslie Hall, called for the purpose of endorsing the programme of public health as laid down by the nurses. Besides addresses by the Mayor, School Inspector, local physicians and others, Dr. Phair of the Department gave an instructive address explaining the policy and object of the Division of Child Hygiene.

After Kemptville Miss Howie continued her work in Cardinal and vicinity, until sent into Northern Ontario for the summer season.

Misses Campbell and Castle have conducted an excellent public health demonstration in Eganville and vicinity during the winter months. As a fitting close to their work a clinic was held in the town. Drs. Phair and Kitely conducted the clinic which had to continue an extra day beyond the scheduled time, owing to the numbers presenting themselves. Moving pictures connected with health propaganda were shown in the afternoon and evening by Mr. Jones of the Department and which was followed by a forceful and instructive address by the Deputy Minister, Dr. Bell, before an audience which overcrowded the Town Hall.

During the spring and summer months, Nurses Campbell and Castle conducted a health demonstration centering on Barry's Bay, which was also concluded by a clinic conducted by Drs. Phair and Kitely. This clinic was one of the largest ever held in the district.

These same nurses are continuing their work with headquarters at Killaloe.

CHEST CLINICS

For some time Dr. Hopkins of the Mowat Sanatorium gave a clinic twice a month at Brockville and once a month at Renfrew and Pembroke. These clinics were very popular with the physicians and were well patronized. Since the closing of the Kingston Sanatorium we have had to depend entirely on the clinics Dr. Brink has been able to allot to us.

Dr. Brink and his assistants have conducted several clinics which were markedly successful in point of numbers and the interest shown by the physicians, but he has been able to cover only a very small part of the district. At several meetings of the physicians strong resolutions were passed urging the Government to establish a sanatorium in Eastern Ontario and incidentally provide one or more specialists who would have charge of chest clinics in all the principal centres.

Communicable Diseases

SMALLPOX

An outbreak of this disease occurred at Eganville in the early part of the year. It apparently was brought from one of the lumber camps by one of the men returning to his home.

Fortunately two public health nurses were about to give a demonstration in this part of the district and they were of great assistance to the local physicians in carrying on a campaign of smallpox vaccination. Practically all the school children and large numbers of adults and children of pre-school age in the town and surrounding country were vaccinated. Pembroke complained justly of several cases that had to be removed from the trains and cared for at the expense of the town.

It was a couple of months before the epidemic was stamped out.

A widespread outbreak occurred in Almonte during the fall of the year. The first cases were not recognized and despite energetic action later by the board of health of the town and township, more than a hundred cases occurred before it was under control. Emanating from this outbreak quite a number of cases occurred in Pakenham and Carleton Place. Almost all the children in these localities are now protected by vaccination.

Quite a number of sporadic cases occurred at Sydenham, Harrowsmith, Kingston, Arden and some other localities, but they were under control before many were affected.

TYPHOID FEVER

No epidemic of this disease occurred in the district during the year. Much credit is due to the Division of Sanitary Engineering in this regard. Their constant supervision of the municipal water supplies undoubtedly prevented many outbreaks. A number of cases in Embrun were apparently due to the wells which mostly all tested badly. Cases in Rockland and Iroquois were apparently due to the municipal water supply. I have strongly urged that the latter town be ordered to chlorinate their water supply, as the source of their water is very suspicious.

RABIES

During the year we had a large number of dogs and other animals affected with rabies. The first cases were near Kemptville and later other outbreaks occurred in Carleton, Renfrew, Dundas and Prescott Counties. All persons bitten received the Pasteur treatment, either at the Provincial Laboratory in Ottawa or later through their own physician. The muzzling order of the Dominion Department of Agriculture was not very effective, largely owing to the want of any organization for enforcing it. Towards the end of the year the outbreak seems to have completely subsided.

OTHER DISEASES

Scarlet fever, measles, diphtheria and the other communicable diseases were much less prevalent than in former years.

Miscellaneous

Apart from the ordinary work connected with the district and the activities already referred to, conditions arising which required special attention and one or more visits were:

Consultations resulting in the appointment of full time Public Health nurses in Cornwall and Gananoque;

Suit for damages brought by a parent against the school board of Beachburg for impairment to the health of his child owing to unsanitary conditions in the school;

Inspections of schools in Gananoque and Pembroke;

Dispute between Board of Health and School Board in Kingston as to control of communicable diseases:

Negotiations in an endeavour to keep open Mowat Sanatorium at Kingston; Visits to several towns to promote interest and co-operation in the Dental Clinics arranged for by Dr. Conboy;

Special work in connection with the water supply of Plantagenet;

Arranging a settlement between the town of Napanee and a resident who had threatened suit for damages owing to alleged faulty construction of sewers; Nuisance caused by butter factory at Sharbot Lake;

Special report for the Department of a cheese factory in Township of Leeds, which was the subject of litigation;

A similar condition at Lunenberg, Stormont County;

Litigation between the M.O.H. of Arnprior and a local resident who claimed damages for unlawful quarantine:

Arranging for the holding of child welfare clinics at the fall fairs;

Inspection of slaughter houses at various points:

Responding to many requests for assistance in abating nuisances from Medical Officers of Health, Boards of Health and others.

DISTRICT NO. 6

W. EGERTON GEORGE, M.B., D.P.H.

I have the honour to submit herewith my fourteenth Annual Report.

UNORGANIZED AREAS

The problems of this district during 1926 have largely been those of previous years. Even at the expense of being uninteresting and of some annoyance, I find it necessary to reiterate some of them.

One of the most outstanding of these problems is the lack of provision for medical attendance of those indigent pioneers and their families who inhabit our frontiers in the unorganized areas, when, because of communicable disease or other cause, they cannot be removed to a hospital receiving Government aid.

The sporadic cases of typhoid that occur along the rivers which carry the sewage from one or more towns toward the Hudson Bay have become a serious difficulty owing to a change which was made in the Regulation for the Control of Communicable Diseases in 1923, which prevents the Department using its appropriation to provide the necessary medical relief.

A third problem is found in organized municipalities who are forced to care for cases of communicable diseases who come to them from unorganized territory.

A fourth is the absence of provision for care of the aged from unorganized areas in the district institutions.

A fifth is the lack of provision for the burial of the bodies of those indigents who die in unorganized territory. The lack of funds for this purpose even applies to the coroner's order for burial.

The last of the problems which I wish to mention relates not only to unorganized territory, but to a large number of organized townships as well, and relates to the lack of provision for the correction of the defects which are being found by our Public Health Nurses in the children of the areas mentioned.

This office would suggest that the unorganized districts be given more precise legislation, that is separate government, to meet their particular needs. Since nuisances and unsanitary conditions cannot be removed from the supervision of the district officer, I would suggest that a sanitary inspector be attached to each office of the three northern health districts.

COMMUNICABLE DISEASES

There are some eighty-seven organized municipalities in this health district. The balance of the area is unorganized and has no provision for the reporting of communicable diseases, with one exception. Employers of labour in unorganized territory are legally responsible for notifying the Department of

cases of communicable diseases which occur among their employees. This applies principally to camps. Not an inconsiderable amount of time is spent by your officials in controlling small outbreaks in unorganized areas not in camps.

Below are the total	cases	reported	in	1926:—
---------------------	-------	----------	----	--------

It is interesting to note the improvement in the incidence of communicable disease in this district. While I am convinced that there were many cases which did not reach the notice of the municipal authorities, because of their mildness, and were therefore not included in the weekly returns of the secretaries of boards of health, yet the returns were sent to the Department more regularly by these officials and more municipalities complied with this provision of the Health Act than ever before.

There were two extensive outbreaks which threatened to reach the importance and proportions of epidemics. The most important of these was smallpox in Timmins in October.

Of this outbreak, the first case brought to the attention of the Medical Officer of Health had been sent into the hospital with a diagnosis of influenza, but the occurrence of the typical rash corrected the error and sent the hospital staff to the doctors for vaccination. This was on September 16th. In spite of these precautions, the orderly whose vaccination failed to take, promptly developed the disease. As it occurred, each case was removed to an isolation hospital. No further cases developed in the hospital and none of the cases which developed in the town could be traced to either of the two. However, other cases began to make their appearance throughout the town, so that by October 12th seven new cases had been reported. The Medical Officer of Health was away on a vacation, so a wire was sent to me at North Bay. The American Public Health Association was meeting at Buffalo that week, and as my office had forwarded the wire, I immediately left for Timmins. Since the Local Board of Health had taken no

effective measures and were without guidance, it was urged that the Medical Officer of Health return immediately. During the absence of the Medical Officer of Health, Dr. H. H. Moore, his assistant, Dr. Steel, had been acting. He had no official standing and was a very busy man. He was most courteous and the little time he was able to give was given graciously and efficiently. when he was busy, I was given to understand that as far as he was concerned, the epidemic would have to wait until he was finished. I have given this little detail in order to emphasize the necessity of having someone on the ground during epidemics who is legally responsible for making the epidemic the first considera-A meeting of the Local Board of Health was called and the various responsibilities of the Medical Officer of Health, Local Board of Health and the Municipal Council under the Vaccination Act were discussed. It was suggested that the Local Board and Medical Officer should exercise all the powers imposed upon them by the Act before calling on the mayor and council. were accordingly notified that on and after the 25th of October no child who had not been vaccinated would be allowed to attend school. They asked the council to supplement this by providing public vaccinators in the schools at the expense of the town, the arrangements to be made by the Local Board of Health in conjunction with the Medical Society, who designated the physicians and hours of attendance at the various schools. The council promptly called a special meeting and complied with all the recommendations of the Board. Within one week 97% of all school children had been vaccinated. The physicians discovered six mild cases in attendance at school during the vaccination procedure. in itself was sufficient warning to the responsible authorities that a large number of new cases were to be expected. The work of vaccination was most efficiently To indicate this, I will describe the results in one school with an attendance of over five hundred; every one was vaccinated and only two did not react. These were revaccinated but I did not obtain the final results. By the end of the first week in November five thousand new vaccinations had been performed This was approximately one-third of the population. A large number of vaccinations had also been performed in every town in the North Country. The outbreak ended in the first week of November with sixty-four cases in all. The cases were exceedingly mild; some in attendance at school had not lost a day. One case ran a mild course for a few days and then developed a high temperature, followed by paralysis. This was the only one that terminated fatally.

The second epidemic occurred at Parry Sound and was one of measles. It began in the schools shortly after the summer vacation. It was traced to a child which had come from Capreol with a cold. Before the rash had made its appearance the child had visited a number of homes, with the result that a fair sized outbreak was on their hands before the authorities were apprized of the situation. The epidemic reached its height during the latter part of October and the first half of November, declining rapidly during December. There were two hundred and forty-four cases reported, but it is thought that many who developed the disease did not have a doctor and for this reason they were able to avoid quarantine and reporting. They were assisted in this neglect of duty by the mildness of the cases. The medical officer, Dr. Biehn, is of the opinion that there were at least four hundred cases with not a death.

Graphs were made for the following diseases: measles, smallpox, diptheria and scarlet fever in order to indicate that there was a sharp rise in the incidence during September for the first three, while scarlet fever does not show this characteristic, it being more prevalent throughout the year. The same rise was

to be expected with scarlet fever too, but its excessive prevalence in mild form during the past eight or nine years no doubt had an influence in preventing the usual October rise. March and April are usually low months, but seem to have had little seasonal influence during the past year.

The largest number of cases of typhoid was reported from Timmins, but a few cases were also reported from North Bay and Sudbury. In Timmins the usual sources were carefully followed, but the one responsible was not discovered. Milk, butter or cheese did not seem to account for the cases since they did not follow milk routes or the consumers of a specific cheese or butter. Flies and privies were carefully examined, but little evidence was found to suspect them. The water is chlorinated and meets the requirements of the orthotolodin test. However, the number of pumps in operation varies, placing an important responsibility on the human factor in the control. I do not believe it is unjust to hold this element under suspicion until the responsibility can definitely be placed elsewhere.

Tuberculosis is not being reported as it should be, although the returns given above do not include the large number of tuberculous cases sent to sanatoria from unorganized areas. A great deal of time and attention is being given to those suffering from this disease by this office, especially in establishing the responsibility for the sanatorium care of indigents. Indeed, it appears to this office that too much time is given to this work and that considerable could be saved if the sanatorium officials served their notices on the municipalities from which the patients come before this office is asked to investigate. Undoubtedly time has been wasted in this work that cannot be justified. Since it is unavoidable that immigrants suffering with tuberculosis should frequently pass our immigration inspectors, we have kept watchful supervision over the indigent tuberculous cases from this district. Such immigrant cases should be deported when they become public charges.

Immunization

For the prevention of smallpox, Dr. Coulombe of Sturgeon Falls has insisted that all school children be vaccinated. This year he vaccinated over three hundred.

Besides the immunization of a large proportion of the population in Timmins by smallpox vaccination, efforts were made to have the medical officer undertake the immunization of school children against diphtheria. Dr. Mitchell, Medical Officer of Health of Cobalt, has begun immunization with toxoid of primary rooms only. Some work has been done by Dr. Biehn, M.O.H. of Parry Sound, and by Dr. W. J. Cook, M.O.H. of Sudbury. Dr. Coulombe, M.O.H. of Sturgeon Falls, has begun a campaign of education preparatory to obtaining the consent of the parents.

PUBLIC HEALTH NURSING

The principle which has been followed in stationing our nurses in northern districts has been very simple. During the winter they have been assigned to urban work, while during the summer they are given rural fields.

I feel that I cannot speak too highly of the efforts of our public health nurses. Their work in this district has been one of the most efficient public health tasks which the Department has undertaken. It is the opinion of this office that all settled townships in the unorganized districts should be under the regular supervision of a provincial public health nurse. It is grati-

fying that the Department attached two additional nurses to this district in June of this year. It is true that home visiting in the interest of the defective child has not been satisfactory because of the poverty which prevents the necessary expenditure involved in the corrections recommended, but it has been effective in the control of communicable diseases and the correction of faulty infant feeding. To a much greater extent it has been effective in the interests of the mother and the expectant mother. School health supervision has been the open door to the home for the public health nurse, while it is most successful, in laying broad and deep the foundation of personal hygiene in the child. Nearly every field which has been worked by a public health nurse has been enthused by the benefits obtained from treatment of some hopeless cripple, and the restoration to health of mal-nurished babies or the victims of improper feeding.

In the first five months of the year there were two provincial public health nurses attached to this district. Miss Hally, who has been in the district several years, had been assigned to certain small urban municipalities along the Canadian National Railway south of North Bay. This was follow-up work over the area recently covered by Miss Heeley, who had resigned. The section is a very difficult one to cover, but the children in the schools were inspected and suspected defectives recommended to consult their family physicians. Proper records were filed in each school. Remedial clinics will be necessary if satisfactory results are to be obtained in the correction of defects.

Miss Smith, who had recently come to the district, was assigned to an entirely new field at Kirkland Lake, where she carried on a complete survey in the town and in the Township of Teck. The public generally and the municipal officials were greatly impressed by her work but were prevented from appointing a municipal nurse by financial difficulties.

In June Miss Hally was sent to do rural work in the northern end of the district, in the section between Matheson and Cochrane, while Miss Smith was assigned to some fifteen townships in the rural area between New Liskeard and Englehart. Most of the townships in this division are unorganized and the settlers are indigent. Governmental appropriations will be necessary if the defects of children are to be corrected. Mouth and throat conditions particularly require attention.

Two new nurses were attached to this district in June and appointed to the rural area between Sturgeon Falls and Warren. This comprises some thirty townships. These nurses are Miss McEwan and Miss Pennock. It is to be regretted that we lost the services of Miss McEwen for a couple of months as the result of an accident while on duty, which incapacitated her for that length of time.

This office would suggest that the rural summer work be discontinued not later than October first, and that the nurses be assigned to urban centres in order if possible to control the marked rise in the incidence of communicable diseases in the fall months after the opening of school.

SUMMER TOURIST CAMPS

Summer tourist camps have not been a serious problem in this district during the past year as there were only seven. Of these two meet the requirements of the Provincial Department and were given banners signifying the approval of the Provincial Department of Health. These were located at North Bay and Sudbury. That at Sturgeon Falls was not used and received no supervision. That at Sundridge received considerable attention but fell somewhat

short of the approval of the Department. The well was chlorinated and cleaned out at Trout Creek and the privies put in good condition, but the supervision necessary for cleanliness was not given. Late in the year the Northern Development Branch opened a tourist camp at Tilden Lake, about twenty-five miles North of North Bay on the new road to Cobalt and the North. It has been suggested that someone be given a concession to run a gas station and provide meals and refreshments at this camp in return for which he keep it clean.

When this road is completed next year many more such camps will be established, while other municipal camps will be opened, in important towns.

WATER SUPPLIES

With the exception of four, all public water supplies within this district are chlorinated. Of these four, one is filtered, one is a ground supply, one is spring water, and the other is from a lake which has no residents on the water-shed.

Although the municipal supply in Timmins is chlorinated it came under suspicion last fall because of the occurrence there of several cases of typhoid. No other source seemed to so well explain the outbreak. In the pump house there are six pumps, each drawing from a well through separate suction pipes. The chlorine is fed into the well at the mouth of the intake from the river. All six pumps are not in continuous operation and as half of the suction pipes are on either side of the intake to the well, there is reasonable grounds for doubt as to the thorough mixing of the water and chlorine. It was suggested that an air jet be placed in the well to insure thorough mixing.

Elk Lake is a village on the west bank of the Montreal River at the mouth of Bear River. There are few good wells in the village and at least three quarters of the residents depend on either river for their domestic needs. An inspection of premises abutting the rivers indicated that the water was receiving a serious amount of pollution. Cesspools and privies frequently had direct outlet to either river. The residents were notified to boil all river water used for drinking purposes, while a thorough clean-up was instituted. Overflows from cess-pools were cut off and privies were made sanitary. This general support to a new but efficient sanitary inspector will, I believe, be the means of maintaining proper conditions and preventing them reverting to the previous state.

The chemist of the Division of Sanitary Engineering endeavoured to get the council at Haileybury to provide for further treatment of their supply in order to obtain a clear sparkling water, free from all colouring matter. These efforts were unfortunately unsuccessful.

SEWERAGE SYSTEMS AND SEWAGE DISPOSAL

The sewage disposal plant at Timmins (activated sludge) has been the subject of frequent investigations due to the poor quality of the effluent at times. However, in the fall at the direction of Mr. Downey, one of our sanitary engineers, the settling chamber was emptied. It was found that the hopper bottom was not sufficiently steep to allow the sludge to slide down so that it could be carried off with the air lift. A thorough cleansing promptly improved the effluent. A man is now kept continuously at the plant to keep the sludge from lodging on the sides of the hopper. It is the opinion of this office that the settling tank is too small, or in other words the town has outgrown its disposal system. The town was organized in 1910 and now has a population of over fifteen thousand. It is of the utmost importance that this plant work efficiently as a municipal

water supply is taken from the river seventy miles farther down at Smooth Rock Falls. Settlers along the river below the town depend almost entirely on the river for domestic needs and this has resulted in frequent cases of typhoid among them.

In August the Deputy Minister visited the district in regard to the sewage disposal works at Timmins and Cochrane. His efforts in Cochrane were directed toward having the plant put into operation. It had lain idle for nearly two years pending completion of a power agreement. However, after considerable trouble, power was at last delivered to the municipality from Island Falls by the Abitibi Power and Paper Company early in 1926. A request by the Deputy Minister, coupled with his assurance to the municipality that the Department would supply a competent sanitary engineer to supervise its performance until satisfactory, was all that was necessary to have the power turned on. The Cochrane disposal plant was put into service in September.

At Kirkland Lake we have another example of a municipality which has rapidly outgrown its sewer system. As the septic tanks had proven too small from the first, and since the lake which receives the effluent is rapidly filling up with tailings from the mines, the municipality has been forced to reconsider other sewer outlets and other forms of treatment. To add to these problems, the sewer on the main street is already so overloaded that it was necessary to lay a new sanitary sewer on the other side of the street to supplement the old one. Regarding treatment, the new plans and specifications have not yet received final approval.

At Parry Sound a number of private sewers and several public sewers empty into the Seguin River between the upper and lower dams. The lower dam was burned out two or three years ago, causing a lowering of the water, so that the bed of the river is exposed. Consequently during the hot summer weather the outfalls of these sewers along the banks are above the water level, with resulting nuisance. Efforts were made to secure control of the lower dam and have it rebuilt, but satisfactory arrangements could not be completed with the owners. However, late in the year the property changed hands and the council are confident that a solution of their problems will be reached.

Sewage treatment at North Bay is a cause of complaint each year. It is only a matter of a comparatively short time until the city will be forced to provide more adequate treatment. The use of storm sewers for sanitary purposes has resulted in nuisance at the outlet.

Sudbury has no treatment as yet, with the result that complaints have been received by the Department during the past year. Treatment is needed. Both these last two municipalities should be warned to prepare for these necessary expenditures.

Milk

Early in the year a careful investigation was made of the milk supply of the Eplett dairy at Timmins. Some of the local physicians had taken an antagonistic attitude toward that supply. To terminate these complaints the company requested the Department to investigate. As Eplett's milk comes from producers in the vicinity of New Liskeard, the Department, under the Division of Sanitary Engineering, established a laboratory at that point. The milk from certain producers was found unsatisfactory. Either the milk was dirty or the bacterial counts were excessively high. As fast as these errors were discovered the producers were notified, with the result that within three weeks the bacterial counts of this milk taken from the delivery wagons in Timmins had dropped to

below 10,000 per c.c. With the bacterial count below 10,000 per c.c. and the added advantage of being pasteurized, in the opinion of this office Eplett's milk became the best in Timmins. Unfortunately Eplett did not continue to use our district laboratory in North Bay to keep check on his producers, with the result that samples sent to us by the local board of Timmins did not show comparable counts with those obtained after the corrections were made. During the hot summer weather the counts became high again, then as the weather became cool the bacterial counts dropped.

A complaint came to the Department by one of the dairymen at Monteith. His chief objection was lodged against the sale of milk by the Government Farm to consumers in the village. This office was very sympathetic to the principle at the basis of the complaint, but an inspection of his dairy revealed conditions which could not compare with those at the Experimental Farm. The services of the Department were offered to assist in putting his supply in the best possible grade. However, it was felt that it would be a hardship to prevent the Experimental Farm selling to those who take the trouble to go after it until such time as the local producers could deliver an article reasonably its equal.

In the larger towns within the district careful supervision must be kept on the milk dealer. Unlike the producer, the milk dealer is not confronted with any marked increase in cost. They are therefore not entitled to share in the price increase necessitated by the increased cost of production in winter months.

MINISTER'S VISIT

The Minister visited the district during the late summer. His visit on this occasion was largely to obtain first hand information regarding the working of the chest clinic of the Industrial Division, which was then in operation at Creighton, and afterwards at the Frood Mine. This office wishes to express its appreciation of these visits as it affords opportunity to bring to the attention of the head of the Department matters which appear in an entirely new light when seen on the ground.

STANDARD CAMPS FOR LUMBERMEN

Standard camps have now been a compulsory requirement for some five years. As pointed out *before they were introduced*, it has been found impossible to enforce one interpretation of sanitary principles to the exclusion of all others. As a result, the standard forms for camps are not being complied with, neither can they be. In order to save the camp regulations as a whole from the general disrepute into which they have fallen, it is advisable that those regulations making standard forms compulsory be *amended* so that they appear as recommendations or suggestions. This will enforce on lumbermen in unorganized territory sound and sane principles of sanitation without the arbitrary interpretation of the present standard forms. Lumbermen will be placed, in regard to sanitary principles, on the same level as other employers of labour in such territory.

A camp which is sanitary in all but one particular cannot have that weakness corrected unless the form is in accordance with those prescribed in the standards. Authority should be placed on sanitary inspectors to make necessary corrections and enforce principles without having to close the camp and put the men out of work because of this lack of form. Previous camp regulations provided that owners or their agents must make their camps comply with the regulations to the satisfaction of the inspector of the Department. Indeed, the inspectors

are exercising this authority without the necessary legal provision. Such provisions could be inserted in the amendments above mentioned.

VITAL STATISTICS

In order to make scientific progress in this office exact, quantitative must replace qualitative data. The mortality statistics should be available as a guide to indicate where supervision is most required. The returns of Births, Marriages and Deaths should pass through the office of the district officer on its way to the central office in order that he may have the information at the earliest date. This office respectfully suggests that a clerk or secretary be attached to each district in order to compile the records as they are received.

DISTRICT No. 7.

G. L. Sparks, M.D.

I beg to submit for your information the following report outlining the work done during 1926 in District No. 7, which includes the Districts of Thunder Bay, Rainy River, Kenora and Patricia:—

The 1926 annual meeting of the Ontario Health Officers' Association was attended in Toronto during the month of May; and following this meeting the District Officers were called to a brief conference with the Deputy Minister of Health. At this conference we were advised that definite regulations had not been adopted as a result of the 1926 survey of motor tourist camps, refreshment booths and summer camps, but that a set of minimum requirements had been drawn up covering motor tourist camps and a set covering refreshment booths. In either case the requirements, if met, would call for a certificate of approval to be issued by the District Officer of Health or other authorized inspector appointed by the Department. We were also advised that it was the intention of the Department that—as in 1925—an engineer from the Sanitary Engineering Division be detailed temporarily to each district, and that it would become the district officers' duty to accompany the engineer on his inspections of motor tourist camps and refreshment booths. Mr. F. R. Manuel finally arrived in Fort William about the middle of August; and while the season in this area was nearly at an end, we were able to visit six (6) motor tourist camps and forty-two (42) refreshment booths in the Districts of Thunder Bay, Rainy River and Kenora. In no case was a certificate of approval issued to a motor tourist camp in District No. 7. Two (2) certificates of approval were issued to refreshment booths, one in the District of Thunder Bay and one in the District of Rainy River.

ROUTINE VISITS TO MUNICIPALITIES

Owing to the time spent in accompanying the sanitary engineer on the inspection of motor tourist camps and refreshment booths, I found it impossible to complete the customary annual routine inspections in the municipalities of Fort Frances, Rainy River, Kenora and Keewatin. However, routine inspections were carried on in the following municipalities: Fort William, Port Arthur,

Dryden, Shuniah (summer resorts), Sioux Lookout, Nipigon, Schreiber and Ignace. Reports covering the above visits and inspections were duly forwarded to the Department.

Dairies

Dairies were inspected in Fort William, Port Arthur, Dryden and Schreiber. I have endeavoured to encourage the local health authorities in Fort William and Port Arthur to continue to make use of the facilities available at the Department's Branch Laboratory in the matter of bacterial counts on milk samples. A considerable percentage of Fort William's milk supply is pasteurized and this is also the case in Port Arthur. Practically all this milk (pasteurized) is produced in the country adjacent to the two cities but not under continuous supervision (at the seat of production) by the city milk inspectors. The city health authorities are therefore faced with the necessity of exercising a continuous check over the efficiency of the pasteurization process, and over the sanitary conditions governing the pasteurization and distribution of the milk. The bacterial count supplies this check which is of equal value when applied to the efficiency of the sterilization of milk bottles, utensils and other apparatus in use at the milk pasteurization and distribution plants.

After reading certain memoranda received from the Deputy Minister of Health it has appeared to me that there may have been some ground for a misinterpretation of the intent and meaning of existing legislation, relative to the production and sale of milk for human consumption, and I believe that there should be no doubt as to the authority conferred upon medical officers of health and local boards of health in the matter of their control over the sanitary conditions affecting the production and sale of milk for human consumption.

WATER SUPPLIES

Attempts have been made to continue to secure adequate supervision over water supplies in municipalities, and in the case of the water supply of the village of Nipigon, a special report (dated October 26th, 1926) has been forwarded to the Department. In municipalities where water chlorination plants are in operation, I have consulted with the local medical officers of health whenever bacteriological examinations of water samples (chlorinated) sent to the laboratory indicated pollution with colon bacilli. During the season of navigation an assistant in the branch laboratory at Fort William-acting under the supervision of the Dominion Department of Health-collected routine samples from the water supplies on Great Lakes steamships arriving at the head of the lakes. Copies of all laboratory reports of bacteriological analyses of these samples were supplied to me; and in the case of a report indicating pollution with colon bacilli, the matter was brought to the attention of the steamship company concerned. Similar action was taken with regard to laboratory reports indicating pollution of miscellaneous samples sent in by medical officers of health or others.

During the month of July, I accompanied the Minister of Health, the Deputy Minister of Health, and local health officials of the city of Port Arthur on an inspection of the Current River watershed, adjoining the city of Port Arthur. In March, 1926, the C.P.R. completed the installation of a liquid chlorine control apparatus in connection with their water supply at Ignace. Inspections of water chlorination plants in District No. 7 were made by Mr. F. R. Manuel, from the Sanitary Engineering Division, during the course

of his survey of motor tourist camps and refreshment booths. Similar inspections by a sanitary engineer should be repeated every two months throughout the year.

SEWAGE DISPOSAL, NIGHT SOIL, MANURE AND GARBAGE DISPOSAL

In the municipalities visited during the year, the importance of adequate measures relative to the above was urged upon the local health authorities.

Summer Resorts (Municipality of Shuniah)

During the summer season I accompanied Dr. C. N. Laurie, M.O.H., on inspections of the following summer resorts in the municipality of Shuniah:—Pearl, Loon Lake, Birch Beach, Amethyst Harbour, Silver Beach, Silver Harbour, Wild Goose Beach, Green Bay Beach and Ishkabibble Beach. The municipal council continued during the 1926 season the practice of appointing a full-time sanitary inspector for the months of July and August; and the improvement in sanitary conditions at the above-mentioned summer resorts was largely due to the inspector's good work.

TERRITORY WITHOUT MUNICIPAL ORGANIZATION

At the present time there is no adequate local health machinery in the territory without municipal organization in District No. 7. The area of the district is large and it is physically impossible for one official to properly discharge the duties of a local medical officer of health throughout the above-mentioned unorganized territory. Annual sanitary inspections of public schools in this unorganized territory would appear to be as necessary as seem to be the case in municipalities where local medical officers of health have been required by the Department to submit annual reports of such inspections. Health education is vital to real progress in public health; but the prime requisite is to begin at the beginning and to require the provision of adequate local health machinery throughout the entire district. An immediate solution of the problem may be impossible owing to economic considerations; but wherever practicable, the authority of the present part-time rural medical officers of health should be tentatively extended over the unorganized agricultural townships adjacent to the rural municipalities, and provision should be made for reasonable remuneration for services rendered. During recent years an imposing superstructure has been built up in the matter of public health organization; but until adequate local health machinery exists in the territory without municipal organization, there can be no uniform health supervision throughout the rural areas of this district.

Communicable Diseases

The smallpox outbreak at Atikokan (unorganized), in the District of Rainy River, was kept under control and finally brought to an end as a result of efficient supervision by Mr. W. C. Millar, District Provincial Sanitary Inspector. Mr. Millar was placed in charge of the smallpox situations at Rocky Inlet and Atikokan, and the outbreak at Atikokan was limited to five cases, of which two were fatal. The outbreak at Rocky Inlet apparently had no direct connection with the Atikokan cases and did not progress beyond two mild cases noted in my annual report for 1925. Dr. Robert Henderson, of Atikokan, also deserves great credit for his faithful work throughout the course of the outbreak at Atikokan.

During the first five months of the year isolated cases of smallpox developed among Canadian National Railway employees at Glenorchy, Thompson's Spur (near LaSeine), and Bears Pass, all in territory without municipal organization in the District of Rainy River. The question of the responsibility for the care of the patient at Glenorchy (C.N.R. sectionman "Habachuk") has been a matter of controversy with the Canadian National Railways. The Glenorchy case was supervised by Mr. W. C. Millar, District Provincial Sanitary Inspector; and Mr. Millar also took the necessary measures to quarantine the case at Bears Pass, while I visited this patient previous to his release from quarantine. During the last week in April I visited LaSeine (unorganized) to deal with a C.N.R. extra gang, in which one of the employees ("Mike Sidor") had become ill, and on going to Fort Frances for medical advice, had been discovered as ill of smallpox. I took the necessary measures to quarantine and vaccinate all members of this extra gang: and I then proceeded to Fort Frances, where I learned that the local health authorities had already made provision for the patient's care and quarantine. From copies of correspondence since received from the Fort Frances town clerk it would appear that the town of Fort Frances has been put to the expense of approximately four hundred dollars in connection with the care and quarantine of this Canadian National Railway employee, who became ill of smallpox while employed in a C.N.R. extra gang working in territory without municipal organization in the District of Rainv River.

According to the latest correspondence received from Dr. Robert Henderson, of Atikokan, I understood that Dr. Henderson had been unable to collect (either from the Canadian National Railways or from the Ontario Department of Health) his account of \$120.00 for his professional services to the C.N.R. sectionman ("Habachuk"), while ill of smallpox at Glenorchy, in territory without municipal organization in the District of Rainy River.

The entire history of the controversy with the Canadian National Railways regarding the responsibility for the care of the above two C.N.R. employees while ill of smallpox is a revelation of the unfortunate conditions affecting public health work in the territory without municipal organization in District No. 7. If the regulations for the sanitary control of mining camps, sawmills and other industries situated in unorganized territory are not applicable to railway section gangs, extra gangs, maintenance of way gangs and other railway labour employed in territory without municipal organization, it would appear that the above regulations impose responsibilities upon lumber companies and individual employers of labour from which the wealthy and powerful railway corporations are exempt. The point at issue is of considerable public health importance to this district, as it also includes the placing of the responsibility for the sanitary supervision of railway extra gangs and other gangs that are moving up and down the railway lines throughout the summer season.

During the summer months a case of smallpox developed in the city of Fort William, but fortunately there were no seconday cases so far as known.

The prevention of smallpox epidemics in municipalities depends largely upon the thoroughness with which the Vaccination Act is enforced by the local authorities, and in territory without municipal organization upon the extent to which people may be persuaded to submit to vaccination against smallpox.

On July 19th, accompanied by Miss S. M. Carr Harris, public health nurse, I visited the home of a settler in the unorganized township of Stirling, for the purpose of dealing with an outbreak of diphtheria; and the two patients were brought to the Fort William municipal isolation hospital. Two subsequent

visits were made to that township and all contacts were released from quarantine after the required negative swabs were obtained.

During May, July and August, I visited two families in the unorganized township of Lybster to deal with scarlet fever patients in each family, and in November three visits were made into the unorganized township of Scoble in connection with an outbreak of scarlet fever in that township. Miss S. M. Carr Harris, public health nurse, devoted considerable time to the supervision of the cases and contacts in Scoble township, and her assistance was very valuable in limiting the spread of the disease.

During September and October four visits were made to Jackfish, where two cases of typhoid fever had developed. Jackfish is an unorganized community on the north shore of Lake Superior, and most of the residents are C.P.R. employees. The two patients were not C.P.R. employees; and owing to the danger of the spread of infection, I obtained authority to send Miss S. M. Carr Harris, public health nurse, to Jackfish for the purpose of training the untrained attendants who were nursing the patients, also for the purpose of maintaining supervision over the remainder of the community. I endeavoured to carry on general anti-typhoid inoculations at Jackfish and was successful in giving the complete series of three inoculations to forty-two children and adults, nearly half the population. Five others received two inoculations and two received one inoculation. Fortunately, no additional cases of typhoid fever developed in Jackfish.

I have met with considerable difficulty in facilitating the removal to a sanatorium of a tuberculosis patient resident in the municipality of Alberton, District of Rainy River. When I was first notified as to this case, I referred the matter to the local health authorities; but the local health authorities apparently declined to take action to have the patient removed to a sanatorium or hospital, and after four months of fruitless endeavour I was finally able to have the patient removed to the sanatorium at Gravenhurst. Misses Howey and Squires, district public health nurses, assisted in the supervision of this patient, and Miss Howey accompanied the patient during her journey to Gravenhurst.

The problem of the removal to sanatoria of indigent and other tuberculous patients is difficult enough owing to the fact that there is no sanatorium in Ontario nearer than Gravenhurst; but when an endeavour to enforce the particular regulations connected therewith develops into an obstacle race, their application to specific situations becomes painfully deliberate.

The following table has been compiled from the weekly returns of communicable diseases sent to this office as having been received by the Department from the secretaries of local boards of health in District No. 7, during the year 1926. The figures are not to be taken as representing the exact numbers of cases and deaths from communicable diseases; but they may have some value as an index of the communicable diseases reported from municipalities in the district:—

Diseases		Deaths	Diseases	Cases	Deaths
Cerebro spinal memingitis	1	0	Pneumonia, (a) acute lobar	28	18
Chicken-pox	110	1	Pneumonia, (b) bronchial	27	15
Diphtheria	63	9	Puerperal septicaemia	0	1
Erysipelas	1	0	Scarlet fever	91	4
Gonorrhea	3	0	Smallpox	1	0
Goitre	1	0	Syphilis	1	0
Influenza	8	0	Tuberculosis	21	10
Measles	499	2	Typhoid fever	6	0
Mumps	118	0	Whooping cough	38	0

OTHER DEPARTMENTAL ACTIVITIES

To obtain a correct appreciation of the public health work carried on in District No. 7 by other officials and employees of the Ontario Department of Health, it is necessary to consult the annual reports submitted by the Director of the Branch Laboratory at Fort William, the District Provincial Sanitary Inspector and the District Provincial Public Health Nurses. With final reference to your District Officer's duties, I would say that the detailed investigations following the receipt of Widal, water analyses and other laboratory reports would be impossible were it not for the very efficient work of the office stenographer.

DISTRICT No. 8

H. W. Johnston, M.D.

I have the honour to submit the following report of public health activities

in District No. 8 for the year 1926.

During the year more time than usual has been spent in the promotion of public health in unorganized territory where the Department is directly responsible for the administration of the Health Act and regulations. An endeavour has been made to work out some system of service which could be made more regular than has been possible in previous years. Owing to the very large and scattered territory to be covered, and owing to the frequent emergency conditions requiring attention, the attempt to give an adequate service to more isolated communities has been only partly successful.

The incidence of an unusual amount of scarlet fever and measles in the district has required a lot of time in supervision and control methods, but it has also offered a very extensive opportunity to bring before the public the necessity for the use of the recently developed systems for preventive inoculation in the case of scarlet fever particularly. As a result, a number of communities have undertaken to assist in the education of the public by providing free inoculation for school children. In most cases this service includes both prevention of scarlet fever and diphtheria. In many other communities the idea is developing and it is intended to stress the particular advisability of having pre-school children protected.

The district has been particularly fortunate in the very small number of smallpox cases. The total of ten cases were reported for the year. Eight were limited to unvaccinated members of one family, and the other two were isolated cases where the source of infection could not be discovered and from which there were no other known cases receiving infection. A strenuous vaccination campaign and particularly thorough and early control of contacts, under the direction

of the local health officers, prevented any more serious outbreak.

Fourteen reported cases of typhoid fever required investigation. Eight were traced to an unsupervised water supply in a road construction camp. Three were probably due to a carrier from a contaminated milk supply on a farm. The other three cases developed in the section near Hearst and the source of infection could not be located.

Diphtheria was limited to six cases with two recorded deaths. Four of these cases were presumed to arise in a school from an undetected carrier.

In regard to tuberculosis, decided progress is being made in securing early diagnosis and treatment of cases. In Sault Ste. Marie and the immediately surrounding country, much benefit has been derived in this line from the diagnostic clinic provided by the Department. In connection with this clinic, a very thorough canvas of cases and contacts was made two years ago and the benefit is quite apparent in connection with another clinic which Dr. Brink is conducting in the city during the present week. The public health nurses in rural sections have also done much good work in educating contacts and arranging for proper care of patients.

During the year two series of medical examinations among groups of public schools were conducted by Dr. MacKenzie Smith in the public school nursing area served by Miss Grenville. Physical examinations were made of all school children in Bruce Mines, Nesterville, Thessalon, Blind River and over a large rural section west from Iron Bridge. One particularly interesting piece of work was carried on in a High School group. The unusual interest created among these students impressed the idea of the necessity of public health education in groups who were old enough to appreciate health values and who were, in many cases, qualifying for the teaching profession. Dr. MacKenzie Smith's work was very much appreciated both for its value in discovering conditions requiring correction and for its general educational value.

The public health nursing service has been greatly improved by an increase in the number of nurses and by allotments of specified areas to the nurses where a more definite programme can be carried on with the hope of being able to carry on and repeat demonstrations of work.

Following a medical survey of schools in Sault Ste. Marie, provided as a voluntary service by the Medical Society, interest has been aroused particularly in goitre prevention, dental treatment, and the problem of undernourished children. Preventive goitre treatment is being provided in the schools. The Dental Society has undertaken a more comprehensive dental survey with recommendations for treatment, and the health committee of the School Board is investigating the problem of undernourished children.

A number of opportunities were offered during the year for co-operation with the Social Hygiene Council. A series of demonstrations and public health meetings were arranged jointly by the Department of Health and the Social Hygiene Council for the following communities of the district with exhibits, moving pictures, slides and addresses: Sault Ste. Marie, Thessalon, Blind River, Espanola, Little Current, Mindemoya and Gore Bay. Much value would be derived if it were possible to have a similar series of meetings under the same auspices in the rural sections of the district where it is usually difficult to carry on social hygiene education.

In rural and unorganized areas the public health nurses have frequently to deal with health problems of physically defective children where there is no possibility of the parents being able to provide treatment. During the year, through contact with the crippled children's clincis, Rotary and Lions' Clubs, it has been possible to have many needy cases receive treatment for crippled conditions, defective vision, and nose and throat defects. Our association with this more apparent service has been an added means of impressing the value of the whole public health programme in places where it was difficult to secure local co-operation.

A programme of industrial hygiene in the three plants of the Spanish River Pulp & Paper Company has been progressing steadily and during 1926 a system of physical examination of employees was added to the service. Through a

voluntary relief association organized among the employees, improvement was also made in providing surgical assistance for conditions not covered by medical contract.

During the year a number of opportunities have presented for co-operation with officers of the Children's Aid and Mothers' Allowance Board in problems arising where health has an important bearing on the welfare of the families

requiring assistance in these departments.

Public health education, as one of the most important branches of health service, has been constantly stressed in the district. Practically all other problems arising provided an opportunity for opening this subject. Advantage has been taken when visiting schools to discuss public health subjects with the pupils. Demonstrations have been arranged for agricultural societies and school fairs throughout the district. Addresses have been prepared for meetings of women's organizations, rural clubs, church and welfare societies. The value of this type of work would be improved by the provision of a series of health films. In the rural areas particularly, the picture always assures an interesting audience in addition to its value as a health story.

During the months of July and August, the supervision of places providing accommodation for tourists was conducted throughout the district. Mr. Downey, of the Sanitary Engineering Division, was associated in this work and the field was thoroughly covered. Certificates were made out for a number of camp sites and refreshment booths. Many others were just developing and were not yet sufficiently equipped to meet the requirements of the Department. Much

improvement will be made during the coming tourist season.

INTRODUCTION

The history of the average citizen of Ontario will never be written,—not because it is lacking in interest, but because its record of achievement is the general average and is therefore of such common knowledge that we all know it.

But there are two classes of society whose lives are of sufficient interest to form a part of a library. They represent the two extremes. The one is the few outstanding intellectual giants who have accomplished something. These have done work of benefit to mankind. The other class belong to the subnormal population, many of whom have done little work of permanent value, but becoming insane, they were placed in public institutions and their statistical records are found in Parliamentary Reports on the Insane, Feebleminded and Epileptics.

The following table shows the changes which took place in one year in the population of the Ontario Hospitals.

	1925	1926	Increase
Total number in residence at the beginning of the year	9,144	9,524	380
Total number in residence at the end of the year	9,524	9,656	132
Average daily population	9,203	9,471	268
Applications on file	683	814	131
Number of admissions	2,299	2,016	*****
" discharges	1,030	1,010	
" deaths	579	688	
" deported	83	66	
" " eloped	31	53	*****

If we multiply the increase of 268 in the average daily population by the cost of about \$1 per day we find that it cost the Province \$97,820, or in round numbers \$100,000 more in 1926 than in 1925 to support the insane population.

After reading this table a very proper question to ask is this: Is the Province prepared to continue the present programme of an annual by increasing cost for the support of this class of persons? An alternative programme is found in the deliberations of the Canadian Committee of Mental Hygiene. This society at a recent Conference decided that the present system of building and maintaining large public institutions has outlived its usefulness. They recommend the adoption of the Colony System for the care of subnormal persons who are not violent and who do not have to be restrained. It is claimed on behalf of this system that it has two merits. One is that the cost of maintenance is much less and the therapeutic results show a higher percentage of cures, both partial and complete, than what is shown in the Ontario Hospitals. The proposal is worthy of consideration which is the reason why it is briefly mentioned in this report.

The present report, which is the 59th since Confederation, shows the operations of twelve mental hospitals for the year ended October 31, 1926. It has an interest for the average reader because the latter is still blessed with the possibilities of mental and physical fitness and with a desire to live and die outside the walls of a hospital for the insane;

In the year 1926 there were 2,016 persons in Ontario who failed in this purpose and because of their failure they were placed in Ontario hospitals to swell the already overcrowded population of these institutions.

These 2,016 persons represent all classes of citizens. Why should any one go insane? Is it inevitable? Why should 430 persons, highly educated and specially trained, and 287 labourers, 260 mechanics and 195 farmers of Ontario become insane in one year? This is what happened, and the average citizen asks these questions, and because no answer is given this citizen looks upon insanity as something mysterious—some sudden affliction due to some unknown cause. Is it not a logical position to take, that until we know the hidden causes of insanity we cannot understand or cure it? In 1926, 712 insane persons were admitted to Ontario hospitals whose history is so obscure that no cause was known why they became insane. The apparent causes why the remaining 1,304 became insane is found in Table No. 6 on page xvii of this report.

Some of the more violent types of insanity apparently appear without any warning, but when the cause is discovered it will be found that the psycopathic history of these persons disclosed a gradual change from the mental average to the subnormal. Here is a wide field of research for the prophylactic philosopher and psychologist. In his address to the physicians of Toronto about fifteen years ago the late Sir William Osler made the statement that "the time may come when the medical profession will have to adopt a new psychology in relation to cancer and insanity." In view of the steady increase in these maladies, the one physical and the other mental, it would appear that the time has come when this prophecy is being fulfilled.

One can go a step further and say that the permanence of the human race will depend on the success of our efforts to prevent what we cannot now cure, for in this unexplored realm of activity the human race is a world-unit.

It is frequently urged by eager optimists that civilization holds within itself the saving clause for all its defects, defects which are more apparent than real. There is nothing more real than a diseased imagination, a distorted intelligence, or a collapsed mentality. The optimist divides the earth's population into two classes, the civilized and the uncivilized, and having done so generalizes to his own satisfaction upon the achievements of civilization. But all of the 2,016 persons in Ontario in 1926 and who entered hospitals for the insane were civilized. Civilization did not save them from becoming insane. The saving element must be sought in something far deeper than in the hopes of a mechanical and commercial civilization.

For two centuries civilization has been building hospitals for insane persons and for idiots and imbeciles and all this time civilization has been filling the hospitals with its own victims. Every student and every social philosopher knows this and some of them are teaching it in schools and in universities, while others with a mathematical mind are figuring out how long the human race can exist with the daily increase in the number of psycopathic children. When confronted with the signs of the times they point to the number of social agencies to regenerate society. Every city directory has many pages filled with the names of organizations whose endeavour is to lift up the fallen, to educate the imbecile, but yet our social customs give the opportunity to propagate undesirables who ultimately become a burden to be carried by others. Some day may we not awake and find that the burden is too heavy to bear any longer?

The children of those addicted to immorality and given over to unnatural excesses start life with a morbid tendency and with an impaired mental equipment. Many fall by the way in infancy and in middle life and land in gaols and

in hospitals for the insane and for imbeciles. It is not possible to have a sane and healthy national life so long as agencies of mental and physical degeneration continue to operate in our midst. In connection with the care and treatment of the insane and the feeble-minded, medical treatment and custodial care have their place. Signs are not, however, lacking to indicate a healthy and desirable awakening on the part of the general public as to the necessity of more intensive research work on the part of the medical profession as to the causes of mental disease; further, in many sections of the continent the public have demanded and secured legislation, as yet largely experimental, with a view to in some measure limiting the propagation of feeble-minded children.

H. M. Robbins,

Deputy Provincial Secretary.

TABLE Showing the movement of the Hospital population

		spital	Cobourg Hospital	
	Male.	Female.	Total.	Female.

APPENDIX

TO THE FIFTY-NINTH ANNUAL REPORT UPON THE ONTARIO HOSPITALS FOR THE INSANE AND CONTAINING THE ANNUAL REPORTS OF THE SUPERINTENDENTS OF THE HOSPITALS IN BROCKVILLE, COBOURG, HAMILTON, KINGSTON, LONDON, MIMICO, PENETANGUISHENE, TORONTO, WHITBY, ORILLIA, WOODSTOCK, AND HOMEWOOD SANATORIUM, GUELPH.

ONTARIO HOSPITAL, BROCKVILLE

December 18th, 1926.

To H. M. Robbins, Esq.,

Deputy Provincial Secretary,

Parliament Buildings, Toronto, Ontario.

Dear Sir:--

I am herewith sending you the Annual Statistical Report for the year 1926.

Thanking you for your co-operation during the past year.

I have the honour to remain,

Your obedient servant,

F. D. CUMBERLAND,
Acting Superintendent.

ONTARIO HOSPITAL, COBOURG

November 12th, 1926.

H. M. Robbins, Esq.,

Deputy Provincial Secretary,

Parliament Buildings, Toronto, Ontario.

DEAR SIR:-

I beg herewith to hand you Annual Statistical Report for the year ending October 31st, 1926.

Yours very truly,

W. T. WILSON,
Superintendent.

THE ONTARIO HOSPITAL, HAMILTON

H. M. Robbins, Esq.,

Deputy Provincial Secretary,

Parliament Buildings, Toronto, Ontario.

DEAR SIR:-

In accordance with the statutory requirements, I have the honour to herewith submit the fifty-first Annual Report of this Hospital, being for the year ending October 31st, 1926.

Our admissions numbered 304, i.e., eight more than the previous year, and notwithstanding every effort being made to reduce our resident population,

it was increased in number at the end of the term by thirty people. This increase necessitated the adding of some forty additional beds to our equipment.

In justice to the many sufferers who are coming for care and treatment to our Wards, it behoves the Government to take immediate and energetic steps to provide ample, well-equipped, additional buildings, and it is undoubtedly true that these could be most economically and efficiently administered in connection with the existing Institutions rather than in the construction of new centres.

As to the erection of a group of buildings and the removal thereto of chronic cases only, which has been seriously spoken of, the words of the late Dr. Robert H. Steen, who for twenty years was Superintendent of the City of London (England) Mental Hospital, when making addresses regarding "Principles which ought to control modern construction of Mental Hospitals," quoted a former well-known authority, Connolly, as follows: "I believe the absolute separation of the curable and incurable to be neither practicable nor desirable, and I know that the incurable patients are generally better companions for the curable than curable patients are." Also Dr. Green, another English authority, says: "It is a common observation that association with a quiet chronic has a most beneficial effect upon the acute case, especially if this association can be combined with steady employment of some kind."

The work of the Medical Staff has been most energetically and successfully pursued, and though we have not had any serious outbreak of any form of disease, yet the numerous cases of minor illnesses and injuries, and the keeping up of extended clinical histories and records have kept them very busy. The specific treatment of cases of general paralysis, or paresis, by the malarial plasmodium, as well as tryparsamide, has demanded very close and accurate attention by the physicians and nurses, and results have fully justified every effort put forth, and clearly proven that they are much in advance of any other remedies yet employed in Europe, the United States or Canada. In connection with this matter, it is interesting to note the remarks of Dr. George M. Robertson, President of the Royal College of Physicians, Edinburgh, and Superintendent of the Royal Mental Hospital at Morningside, Edinburgh. "In early cases after malarial treatment, about a third are able to return to work, and another third are distinctly improved." (Journal of Mental Science, October, 1926, page 471.)

We herewith append the Annual Report of our Pathologist and Dentist, both of which show that active and increased work has been carried out, and most satisfactory results achieved.

IMPROVEMENTS MADE

In the administrative section of the Main Building, two flights of worn-out wooden stairways have been replaced with iron with mastic treads, and the third flight is now being constructed, and when completed will provide a fire-proof exit from the recreation hall to the basement.

The new porte cochere is well under way, and bids fair to immensely improve the appearance of the approach to the main building.

The new fireproof transformer room has been completed, and is awaiting the transfer and installation of equipment.

A new 300,000-gallon electric driven pump has been installed at our plant on Queen Street South, and with the re-wound motor, it is hoped that our water troubles will be solved for a few years.

The cold storage compartments in connection with the main building kitchen have been completely overhauled and perfectly insulated and a two and one-half ton "Frick" ice machine installed, and entire satisfaction is now being derived.

For the Bursar's house, a complete vacuum steam heating system has been installed, and the comfort of the place immensely improved, as well as economy exercised in the fuel bill therefor.

The dental office has been splendidly fitted up and equipped, and every facility is now afforded for successful work.

The X-ray rooms have also been fully arranged, and the installation of apparatus will be completed early in the New Year.

REQUIREMENTS

Vocational Rooms.—While kitchen and bake-shop accommodation is urgently needed, as shown by me in my report of November, 1916, and subsequent thereto, yet I would at present urge for permission to make a comparatively inexpensive addition to the dining-room section of the female side of the main building so that more adequate provision may be provided for occupational work and therapy, as it is recognized on every hand that this method of employment is most beneficial, if not absolutely essential, for the rapid recovery both in the early and later stages of mental disease. The constructional work could all be done by our present staff.

Additional Root House.—In consideration of the fact that we have added five acres to our garden, with the idea of raising a more adequate supply of vegetables for our rapidly-increasing population, it is absolutely essential that we provide adequate storage therefor. With an adequate supply in our quarries of stone for the exterior structure, we believe that for a reasonable sum a building can be erected.

Farm and Garden.—Notwithstanding the unfavourable wet summer weather, our hay, grain and root crops were abundant and we were able to harvest them in good order. In the garden, the small fruits, apples and peaches were below the standard, but the vegetable supply, with the exception of tomatoes, was excellent.

Thanking you for your ever-ready advice and courtesies when sought, I am,

Your obedient servant,

W. M. English,
Superintendent.

January 8th, 1927.

THE ONTARIO HOSPITAL, HAMILTON

Pathological Report, from November 1st, 1925 to October 31st, 1926.

To the Medical Superintendent,

Ontario Hospital, Hamilton.

SIR:-

I beg herewith to submit a summary report of the work done in my department during the year noted.

We have in the past years been gathering statistics on the prevalence of syphilis as the cause of the psychoses in cases admitted, and over a period of years this has averaged a little over 7.5 per cent. A careful study of these cases showed that in only about five per cent. was the psychosis due to a neurosyphilis. On obtaining these figures the routine test has been given up, due to press of other work, but Wassermann tests are done on all patients where the staff desire to eliminate syphilis.

Twenty-five autopsies were done during the year, and benefit was obtained

from this work by the staff and nurses.

During the year the malarial treatment of syphilis was carried on from the start made last year. In all twenty-nine inoculations were made, and our figures to this date show the treatment of thirty cases. Of these, seven died, sixteen improved, eleven are either fit to discharge or are discharged, and seven unimproved. A number of these inoculations are repeats.

Only four doses of arsphenamine were given during the year.

The administration of tryparsamide was carried on in the treatment of paresis in conjunction with malarial therapy, and it was also used to cure the malaria in conjunction with quinine sulphate. In all, one hundred and seventy-eight doses of tryparsamide were administered, and the average dose was two grams.

Wassermann tests numbering two hundred and sixty-nine were done on blood and spinal fluid, of which fifty-one were positive and two hundred and eighteen negative. Spinal punctures were done on all cases having positive

bloods and on others where indicated, and in all forty-seven tested.

A study was made of the "Colloidal Benzoin Reaction" in the spinal fluid and the test seemed so satisfactory that the work was reported in the Journal of the Canadian Medical Association, 1926, Vol. 16, pages 161-164, with the hope of stimulating further investigation of this test.

The Boltz reaction was studied, but we cannot report results as yet.

A report of our work with malaria in the treatment of paresis was given at the meeting of the Ontario Medical-Psychological Association held in Toronto on October 6th, and three of our improved cases shown.

Respectfully submitted,

W. R. JAFFRAY,

Pathologist.

ONTARIO HOSPITAL, KINGSTON

Kingston, November 12th, 1926.

H. M. Robbins, Esq.,

Deputy Provincial Secretary,

Toronto, Ont.

RE ANNUAL REPORT

DEAR SIR:-

I beg to enclose herewith statistical report for the year ending October 31st, 1926.

Yours sincerely,

Edward Ryan,
Superintendent.

THE ONTARIO HOSPITAL, LONDON

December 10th, 1926.

H. M. Robbins, Esq.,

Deputy Provincial Secretary,

Parliament Buildings, Toronto, Ont.

DEAR SIR:-

I am sending herewith the Annual Report for the past year and also estimates for the present year.

I should like to see every item mentioned in my estimates completed during this year, but this, I know, would be impossible. The balconies which I speak of, could, I think, be constructed for the small expense estimated and they would give much-needed relief. I do trust that something will be done in regard to the salary increases I suggested.

I am also sending you, under separate cover, the report of Dr. Luney, Pathologist. I wish you would look it over simply for the purpose of seeing the immense amount of work that is going on here all the time. This report is, perhaps, too lengthy to be published and I should be glad if you would return it to me when you have examined it, so that it may be kept on file here.

With Dr. Luney's report, I am also sending you a copy of Dr. Stevenson's report on the Special Treatment Clinic. That also shows a great deal of work accomplished and the results are fairly satisfactory.

Herewith is a partial report of the Pathologist at the Ontario Hospital, London, on pathological, serological and bacteriological examinations made during the year ending October 31st, 1926. The plan of the report is based upon the one submitted last year.

TEACHING

A didactic course in elementary bacteriology was given to the junior nurses. The work has been planned along the lines suggested in the syllabus adopted by the Ontario Hospitals. The course throughout has been accompanied with gross and microscopic bacteriological demonstrations. During the fall term twelve lectures were given. Junior and intermediate nurses also attended nine autopsies for demonstration and instruction in gross anatomy.

BLOOD WASSERMANN AND KAHN EXAMINATIONS

Wassermann and Kahn serological tests were carred out routinely on patients admitted during the year. A spinal fluid examination was also made on those showing a positive blood test. Examinations were made on 338 of the 349 admissions. For various reasons, it was impossible to examine the other eleven patients. An analysis of these examinations shows twenty-five positives (male nineteen, female six) or 7.4 per cent. of the cases tested.

The following table indicates the results obtained in these routine tests during the past nine years:

COMPARATIVE 7	TABLE FOR	LAST	NINE	VEARS
---------------	-----------	------	------	-------

Voor	No. of	NT	D 1.6.1		SITIVE	D. C.	No. of Cases
Year	Patients Ex- amined	Negative	Doubtful	Male	Female	Per Cent. Positive	Showing Changes in C.S.F.
1918	237	206	5	12	14	10.03	14
1919	230	195	0	23	12	15.27	15
1920	266	232	6	15	13	10.52	13
1921	272	250	4	13	6	6.9	12
1922	313	297	0	11	3	4.5	11
1923	321	291	1 .	20	9	9.0	21
1924	341	319	0	20	2	6.4	15
1925	364	334	0	22	8	8.2	17
1926	338	313	0	19	6	7.4	20
	2,682			155	73	8.5	

In all cases where the Kahn and Wassermann were found to differ both tests were repeated.

Gastro-Intestinal Infections

On the female side of the main building there has been a large number of cases of diarrhoea, all of which have been investigated bacteriologically and a number of the patients examined serologically. 242 bacteriological examinations of feces have been made on a total of ninety-eight different patients. Some of these patients who were thought to be dysentery proved on examination to be typhoid. Ten cases showed B. dysenteriae in the stools; six showed B. typhosus. A nurse developed typhoid but eleven stool examinations failed to reveal the germ.

During the year patients with diarrhoea and others admitted to the ward where dysentery has been prevalent have received treatment of a prophylactic nature with dysentery vaccine by oral administration. This vaccine has been supplied as required.

WIDAL TESTS

Routine examinations have been made on 334 of the patients admitted. Twenty-five gave a positive agglutination test for B. typhosus. Twenty-five showed a positive result.

THROAT CULTURES

There have been no cases of diphtheria in the institution during the year. Twelve cultures have been examined all of which were negative.

SPUTA

Twenty-eight samples of sputum have been examined, four of which were positive.

Tissues

During the year nine tissues obtained at operation were examined and reported. These examinations were as follows:

AUTOPSIES

During the year twenty-nine autopsies were made. Junior nurses received instruction in gross anatomy at nine of these autopsies.

I beg to again report that the autopsy building is in a very bad state of repair and is most unsuitable for teaching and performing autopsies. I would suggest that during the coming year every effort be again made to have this building replaced.

REPORT OF SPECIAL TREATMENT CLINIC

For Year Ending October 31st, 1926

Twenty-nine patients have been treated at the clinic during the year just closed. These consisted of:

21 cases of General Paresis.
6 " Vascular Syphilis.
1 " Cerebro-Spinal Syphilis.
1 " Tabes Dorsalis.

These twenty-nine patients received the following treatment:

Tryparsamide	271	doses
Phenarsenamine		
Mercury Salicylate	343	"
Bismuth Hydrate	32	"
Theraputic Lumbar Punctures	72	

Of the six cases of vascular syphilis, three have now negative Wassermann tests. The patient with cerebro-spinal syphilis has shown both serological and clinical recovery and has been discharged. The one case of tabes was an out-patient whose illness was of long duration and he received only three treatments and did not report for further treatment.

During the year, we have admitted thirteen new cases of general paresis and four re-admissions. There have been eight deaths from general paresis during the year and there have been seven cases of general paresis discharged (one of these having two discharges and is again in hospital). Two other discharges were unsatisfactory, one going to another hospital unimproved, and the other showing considerable temporary improvement but later returned to the hospital and died. Three of the discharges were in a clinical remission and are still carrying on at home. In addition to these seven discharges, there were three other cases of general paresis out on probation at the end of the hospital year, enjoying clinical remissions, but not yet discharged.

Your obedient servant,

W. J. Robinson,

ONTARIO HOSPITAL, MIMICO

October 31st, 1926.

H. M. Robbins, Esq.,Deputy Provincial Secretary,Parliament Buildings, Toronto, Ont.

DEAR SIR:-

In accordance with statutory requirements I present the Annual Report of the Ontario Hospital at Mimico for the year ended October 31st, 1926.

Admissions, Discharges and Deaths

During the past year there were fifty-one patients admitted by warrant, fifty-one admitted by certificate, and two by the voluntary system, making a total of 104 admissions. Out of this number sixty-seven were born in Canada and thirty-seven came from foreign countries. The hereditary transmission could be traced in seventeen cases. In twenty-eight other cases examined there was found to be no hereditary evidence, and in fifty-nine cases there was no reference made to the patient's heredity. There were forty-eight patients discharged during the year and thirty-five died.

WARRANT VERSUS CERTIFICATE ADMISSIONS

There is an important economic significance in the fact that the admissions by warrant were equal in number to the admissions by medical certificates during the year. The admissions by warrant are under the direction of the Department, which is unaware of the urgent applications made to the hospitals for certificate cases, and as these warrant cases come from the gaols in the hospital districts they virtually have precedence over the certificate cases. Many of these patients from the gaols are of a low order of intelligence and have often come from foreign countries, many even being defectives, and having committed some offence in the community are sentenced for short terms in the County gaols where their mental deficiency is revealed. In some instances the local authorities may desire to evade the responsibility of maintaining these delinquents and send them on to the Provincial Hospitals where they fill the vacancies provided for those men and women of the county who become acutely ill mentally and who would if there were accommodation at the hospitals be admitted by certificates. In this way many who are acutely ill and who would possibly recover if speedily admitted are delayed in their admission by those of the delinquent class who have in the prescribed course been received by the Department as long as there are vacant beds in the hospital. For months together there have been no vacant beds at this hospital for men who are acutely ill largely on account of the accommodation having already been absorbed by these warrant cases many of whom have never been quite normal. If certificate cases were considered urgent and given precedence over the warrant cases for admission, there would be a larger recovery rate at the hospitals and they would not be so constantly overcrowded by a class for whom these hospitals were not specially constructed.

SPORTS DAY

An unusual interest was infused this year in the Annual Sports' day for the patients by the benevolent ladies at Long Branch, who provided at their own expense a generous supply of refreshments for all the participants in the sports and all the onlookers as well.

The outcome of their efforts was to cause the large family here to forget for the time that they were living at a hospital and to substitute for that fact the idea of community interest and community life at their former homes. Even the prizes in many instances were contributed by interested friends outside of the hospital.

The Port Credit Band was good enough to provide a musical programme at the termination of the athletic sports.

GROUNDS AT PUMPING STATION

The grounds at the pumping station have, until the past season, been unfinished. Most of the grading had been done by the gardener and trees had been planted on the newly-made lawns, but because of the different levels of the buildings of the pumping station proper and the electrical pump house, the problem of adjusting these levels was difficult to solve. An additional factor in the problem was the existence of a natural water course emptying surface water into the lake near the intake pipe. When these plans, already well advanced, have been completed, there is now every promise that the only remaining unfinished portion of the water-front which has so long been a shodow on the landscape will become one of the most attractive beauty-spots about the whole of the grounds.

NEWSPAPER DISCUSSION OF ONTARIO HOSPITALS

Where evils of a serious character are believed to exist in benevolent institutions, publicity of a constructive nature is helpful to everyone concerned, not only in assisting the general public to a better understanding of the conditions, but also in offering encouragement and support to those whose efforts are directed to the elimination of those evils. Unfortunately for those whose duties call for daily sacrifice and unfailing self-command and consideration, these duties are not fully understood and appreciated by the casual observer and censure is too often expressed instead of appreciation and encouragement. If, however, the sincerity of institution servants is misinterpreted by those in their care by reason of their irresponsibility, and the misinterpretations are accepted at face value without making due allowance for the condition of those who make them, then those servants are wrongly considered to be unfaithful and their services are estimated as unworthy. With the circumstantial settings, any fictitious pictures may seem in the public mind to be a part of the scene, and the material surroundings will appear to lend colour and credibility to picture. It will naturally follow that all those who have relatives and friends in such surroundings will become alarmed and anxious because of the fears which are aroused by the blended facts and fiction.

There is perhaps no other form of cruelty more regrettable than that of injecting unfounded fears and suspicions into sensitive minds, whose suffering is already almost more than they can bear, and yet this form of cruelty may be unintentionally perpetrated, and in most instances it has been innocently done in the hope of alleviating agony and misery in other cases.

MIXERS FOR SPRAY BATHS

For may years the spray baths in all the cottages have been a subject of real concern. When these baths were installed the Gegenstrom Mixers were put in for supplying the hot water, and as they depended, for efficiency, upon a steady and graduated volume of water being raised to the desired temperature by a measured volume of live steam, any accidental reduction in the volume of water would result in it becoming over-heated and a possible source of danger to those using it.

The introduction this year of an improved form of mixers, the Powers Thermostatic Controller, has removed all possibility of danger. Although no accident has ever happened with the use of the old mixers, the ever-present possibility of such accident was a constant source of dread and anxiety, and the substitution of this newer and safer appliance is a wise and prudent provision.

A considerable saving of coal has also been accomplished by covering the heaters and hot water tanks and pipes with asbestos and mineral wool. A similar saving has been made possible by covering the two hot water boilers and pipes in the Green House and the two at the Store in the same way.

Interior reconstruction of Cottage 5

The joists under the floors in the lower hall and under the lower west sitting room and bedrooms had so far decayed as to become unsafe, and during the year these have been replaced by new ones resting on steel girders. The former metallic ceilings in these same quarters which had been largely destroyed by rust have also been renewed by plastered ceilings. All the rooms on this ground floor have been re-wired and newly painted along with the rooms on the first and second floors and altogether these renewals and replacements have greatly improved the interior appearance and sanitation of the building.

FARM

Efficiency in the management of any part of a somewhat complicated organization is commonly marked by quiet, steady progress without show or ostentation and such is the record of the various activities at the farm during the past year. Notwithstanding the weather conditions were somewhat unfavourable, the general productiveness has been slightly above the average. The hay crop was below the average because of the excessive rainfall in the spring months, but the yield of potatoes was good and the quality excellent. Although the oats were short in straw the yield in grain was good as were also the ensilage corn crop and the root crop for fodder.

The record of the milk production from the herd of cows was slightly above the average, indeed above the production of any preceding year.

Besides a generous supply of fresh pork during the year for the patients, the sales from the piggery amounted to about seven hundred dollars.

GARDEN AND GROUNDS

The supply of fruits and vegetables from the garden was abundant and the quality was excellent, and while they furnished a most important and valuable part of the dietary for the entire population of the hospital, they were at the same time of the greatest benefit to a large number of male patients in providing healthful and agreeable occupation during the summer months.

On account of the frequently recurring rains throughout the season the lawns and flowers and shrubs presented an unusually attractive appearance.

OFFICERS AND EMPLOYEES

During the past year ninety-six persons were employed to fill the vacancies of those who for various reasons had terminated their service at this place. Fifty of these new employees were men and forty-six were women.

On January 31st, Dr. Henry Moyle resigned his position as Assistant Physician in order that he might accept a more lucrative post in the hospital at Worcester, Massachusetts. During his service at this place since October 12th, 1920, he allowed no other interest to interfere with his devotion to the well-being of the patients, and his industry and consideration for all his fellowworkers caused his resignation to be regarded as a distinct loss to the institution.

Dr. Simon Appel, formerly at the Ontario Hospital at Toronto, was appointed temporarily to fill the vacancy created by Dr. Moyle's resignation, and later, on July 18th, Dr. Douglas Campbell was permanently appointed to the staff.

Gratefully acknowledging your helpful counsel and support at all times during the vear.

> I have the honour to be, Your obedient servant,

> > N. H. BEEMER, Superintendent.

THE ONTARIO HOSPITAL, PENETANGUISHENE

November 23rd, 1926.

Mr. H. M. Robbins,

Deputy Provincial Secretary,

Parliament Buildings, Toronto, Ont.

RE ANNUAL REPORT

SIR:-

I have the honour to submit herewith the Annual Report of this hospital for the year ending October 31st, 1926.

At the end of last year we had 367 patients in residence. During the year just closed there were forty patients transferred from Toronto and Mimico, twenty patients died, three were discharged, and one was written off eloped, leaving in residence October 31st, 1926, 383.

By changing the location of the sewing room we were enabled to add fifteen beds to the capacity of the hospital. The former sewing 100m was converted into a dormitory, a new hard-wood floor laid and lavatory facilities installed.

Our rooms for the stores have been completely overhauled and renovated and a new cold storage plant has been built.

The alterations to Cottage B were completed and fire escapes added to both cottages.

Towards the end of the year, the roof of the old root house collapsed and it was necessary to practically rebuild. We have now an up-to-date root house good for many years to come. We also took up three-quarters of a mile of six-inch water main that had been laid when the hospital pumped its own water supply from the bay. This was an arduous piece of work, as after laying the main, all the boulders in the vicinity seemed to have been utilized in filling up the trench.

In August, the hospital suffered a great loss in the death of the late farmer, Major John Preece. Major Preece was not only active and efficient in his own department but took a keen interest in the general life of the hospital. In all our amusements his cheery personality will be greatly missed.

I have the honour to be, Sir, Your obedient servant.

W. K. Ross,
Superintendent.

THE ONTARIO HOSPITAL, TORONTO

November 1st, 1926.

H. M. Robbins, Esq.,

Deputy Provincial Secretary,

Parliament Buildings, Toronto.

RE ANNUAL REPORT

SIR:-

The following is the report for the past fiscal year:

Patients	admitted	377
"	discharged, deported and eloped	231
"	transferred	20
"	died	105
"	remaining on register, October 31st, 1926	847

Of those admitted, seventy-two were suffering from senile psychoses in the various forms. Reference has been made in previous reports to the fact that a large proportion of such patients could be cared for outside of a mental hospital.

It may be noted that the number of patients discharged comprises somewhat

over sixty per cent. of the number admitted.

The clinical work of the hospital has been carefully carried out in every particular by the members of the medical staff. The treatment of patients suffering from general paresis by sulfoxyl salvarsan has been continued, and two hundred and seventy-nine intravenous injections have been given during the year. The results are in many respects encouraging, and practically the same as those reported a year ago. Fifty patients suffering from syphilis in various forms (for the most part paresis) have been treated by bismuth hydrate, as supplied by the Provincial Board of Health. It is found that about fifty per cent. show a modification of the Wassermann reaction. In three cases the the Wassermann reaction, which was strongly positive before treatment, is now negative. There has also been an improvement in the general health of those under treatment. No toxic symptoms have been noted and there has been no soreness or discomfort from the injections, which have been given intramuscularly.

The Training School for Nurses is in a healthy condition. The candidates were particularly successful at the examinations last spring. One pupil in the Second Year obtained the highest standing in the Ontario Training Schools, while two pupils stood highest and next to highest in the Junior Year. All of this year's graduates have taken Post Graduate Training and some of them are already filling responsible positions. It is a matter of regret that the majority of graduates do not remain in Canada but take up positions in the United States.

Much has been done to promote the welfare of the patients by improvements to the hospital wards. The work on the windows has been continued and at the present time the old, iron sash windows have been replaced by casement windows in half of the wards. These changes have greatly improved ventilation and I believe that the general health, as well as the comfort of patients, nurses, and staff, has been benefited. New hardwood floors have replaced several of the old pine floors in the corridors and dormitories, and the basement rooms have been floored with cement. Extensive repairs have been carried out on the roof and numerous other renovations and improvements have been made. A considerable amount of painting has been done, both inside and out.

However, there are still a number of urgent requirements, the first of which is a nurses' home. Half of the nursing staff is housed in the main building, where their rest is broken at night and the accommodation is inadequate and entirely unsuitable. I hope that it will be possible this year to carry out the plans which have already been made for alterations and additions to the present nurses' home.

The pressure for admission of patients is very great and the wards are crowded to the utmost. Increased hospital accommodation is needed for the densely populated Toronto area.

Members of the staff, in all departments, deserve commendation for excellent service rendered. They have done everything in their power to make the work of the hospital successful.

I appreciate and gratefully acknowledge the assistance and support given by you and the Department.

I have the honour to remain, Your obedient servant,

F. S. VROOMAN,
Superintendent.

ONTARIO HOSPITAL, WHITBY

November 1st, 1926.

Mr. H. M. Robbins,

Deputy Provincial Secretary,

Parliament Buildings, Toronto, Ontario.

SIR:-

I have the honour to submit the Seventh Annual Report of this hospital for the twelve months ending October 31st, 1926.

Admissions

Heretofore a considerable percentage of our admissions each year have been transfers from other hospitals, but during the period under review, this has not been the case, for we have required every available bed for new admissions. These have numbered three hundred and thirty, of whom fifty two, or nearly sixteen per cent. entered by the voluntary method, and only four of these were alcoholics or drug addicts. This increase involuntary admissions is gratifying, inasmuch as it indicates a more enlightened public opinion regarding our hospitals.

BUILDINGS REQUIRED

Gradually the hospital nears completion in the matter of buildings, but several have yet to be erected to complete our organziation. Of these a bakeshop and a green-house may be mentioned, but a new fire-proof store to replace the present small, totally inadequate and unsanitary wooden structure, is a crying necessity.

I have the honour to be, Sir, Your obedient servant,

J. M. Forster,
Superintendent.

ONTARIO HOSPITAL, ORILLIA

November 1st, 1926.

H. M. Robbins, Esq.,

Deputy Provincial Secretary,

Parliament Buildings, Toronto, Ont.

SIR:-

I have the honour to transmit herewith the Annual Report of the Ontario Hospital, Orillia, for the year ending October 31st, 1926. This is the fiftieth year since the establishment of the institution at the old site on the shore of Lake Couchiching, which is now the town park of Orillia.

The movement of our population, as given in statistical table No. 1, shows that in our nominal capacity for 1,099 patients we have at present 1,321. The problem here offered needs no comment. That we have 600 applications for admission before us with scores of cases pleading distressfully for relief makes necessary some immediate consideration looking to further accommodation for this class of patient. Our new building, which we will occupy very soon, will at most not accommodate more than 200 and, though this will relieve our immediate necessities, it will not provide for the call of the future.

The increase, in recent years, of the demand for institutional care of the mentally deficient has become very acute. The psychological sifting of school children over a large part of the province has emphasized the matter greatly and, though auxiliary classes have been established in increasing numbers, there are many children of the more troublesome type not easily managed by ordinary methods and for these there is a continuous knocking at our doors.

We had a sad experience this year in our loss by the death of Mr. J. P. Downey, who had been superintendent of this institution for fifteen years. Mr.

Downey's personality was such as impressed itself not only upon the institution in every department but upon the entire community through his wide interest in public affairs. His death was a shock to the citizens of Orillia, was widely felt throughout the province and created a void in the public service.

The school department continues its activities not only in the academic work but in the sense-training classes and the various elementary industrial branches where emphasis is being placed upon such processes as later on become a real adjunct in the practical industries.

The various practical activities have been keyed up to high pressure; the industrial rooms, tailor shop and shoe factory, have filled many large and continuous orders, turning out a surprising amount of mats, rugs, dresses, caps, suits, overcoats, overalls, smocks, chef suits, mackinaw coats, shirts and jumpers as well as a variety of beautiful fancy work for various uses.

The medical work during the year has been extensive and important and intimately related with the management of every department. The work begun last year on the study of scarlet fever immunization has been followed up on an extensive scale. We were visited again by an epidemic of this disease and, with the co-operation of the Connaught Laboratory, retested our population involving the observation of 1,202 Dick tests and immunization for several hundred positive reactors, resulting in a more accurate standardization of the requirement for immunity. Our experience afforded a remarkable evidence of the therapeutic value of the antitoxin treatment of scarlet fever. There were fifty-four cases, all of which were treated with antitoxin and, without exception, gave prompt response. There were no deaths and no complications though a number of the cases started out in severe form and occurred in children of poor physique.

There were 413 smallpox vaccinations and 112 typhoid vaccinations. Two cases of typhoid fever occurred (the source of which we could not determine). Diphtheria has been remarkable by its absence. That we had only five cases was due, no doubt, to the persistent use of immunization in recent years. There were 150 immunizations done this year. There were twenty-six cases of chickenpox. Wassermann tests were done in forty instances.

In addition to the above there were eighty-three surgical operations of all sorts, the larger number being for the removal of tonsils and adenoids. This operation, I may add, has, in certain cases, been followed by most gratifying results in physical and general improvement. There were six fractures. The items in the dispensary numbered 9,840.

A good deal of work has been overtaken this summer in necessary repair and reconstruction. The brickwork under the roof was found to be in a bad state as a result of water and frost. Leaks in the roof made necessary a good deal of re-slating, and other extensive reconstruction has been done under direction of the departmental branch for maintenance and repair. The rink has been largely reconstructed by our carpenter and numerous other major repairs have been or are being completed. Our ice house, which has completely fallen away, will require early replacement.

Allow me here to thank you for your help and counsel given on many occasions.

I have the honour to be, sir,
Your obedient servant,

W. C. HERRIMAN,

Acting Superintendent.

ONTARIO HOSPITAL, WOODSTOCK

RE ANNUAL REPORT OF THE MEDICAL SUPERINTENDENT FOR THE YEAR ENDING OCTOBER 31, 1926.

To H. M. Robbins, Esq.,

The Deputy Provincial Secretary,

Parliament Buildings, Toronto 5, Canada.

Sir:-

I am enclosing you the twenty-first Annual Report for the Ontario Hospital, Woodstock, for the year ending October 31, 1926.

I have the honour to be, Your obedient servant,

J. J. WILLIAMS,

Superintendent.

THE ONTARIO HOSPITAL, GUELPH

March 29, 1927.

H. M. Robbins, Esq.,

Deputy Provincial Secretary,

Parliament Buildings, Toronto, Ont.

Dear Sir:-

We have pleasure in enclosing herewith Annual Report for the year ending October 31st, 1926, for the Ontario Hospital, Guelph, in compliance with your letter of the 25th inst.

Yours very truly,

N. C. Wallace,

Medical Officer.

REPORT

OF THE

Ontario Board of Parole

For the Year ending October 31st

1926

PRINTED BY ORDER OF THE LEGISLATIVE ASSEMBLY OF ONTARIO

Toronto, March 31, 1927.

To His Honour William Donald Ross,

Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOUR:

The undersigned has the honour to transmit to Your Honour the Annual Report of the Ontario Board of Parole, for the year ending October 31st, 1926.

Respectfully submitted.

L. Goldie,

Provincial Secretary.

TORONTO, March 30, 1927.

TO THE HONOURABLE LINCOLN GOLDIE, M.P.P., Provincial Secretary and Registrar, Ontario.

SIR:

I have the honour to present herewith the Annual Report of the Ontario Board of Parole for the year ending October 31st, 1926.

I have the honour to be, Sir.

Your obedient servant,

Alfred E. Lavell, Secretary and Chief Officer.

ANNUAL REPORT OF THE ONTARIO BOARD OF PAROLE FOR THE YEAR ENDING OCTOBER 31, 1926

BOARD OF PAROLE

Daniel Miller

Mrs. G. A. Brodie

Lieut.-Col. T. Ashmore Kidd (Kingston)

George S. Matthews (Brantford)

J. I. McIntosh (Guelph)

James B. Tudhope (Orillia)

Assistants—Capt. J. A. McElhiney and Mr. E. J. Etherington

The Ontario Board of Parole is constituted and carries on its operations under certain statutes of Canada and of the Province of Ontario, and paroles only persons who are in prison for an indeterminate sentence.

The following institutions fall within the jurisdiction of the Board:

The Ontario Reformatory at Guelph.

The Ontario Brick and Tile plant at Mimico, which is an adjunct to the Guelph Reformatory.

The Industrial Farm at Burwash.

The Mercer Reformatory for Women at Toronto.

The Industrial Farm at Fort William.

The Toronto Municipal Farm at Langstaff (Men).

The Toronto Municipal Farm at Concord (Women).

The plan upon which the Board operates is to visit each of these prisons (excepting Fort William) once in two months. On the occasion of these meetings each prisoner, sometime before one-half of his definite term has expired, is brought before the Board, and with the file showing his or her record, antecedents, outside environment, report of trial judge or magistrate, the prison record for conduct, and all other obtainable facts, and after having a personal interview with the prisoner, the Board decides whether to refuse or defer action or recommend such other course as it thinks best in the common interest of the public and the prisoner.

^{*}With great regret the death of the Chairman, Col. Noel G. I. Marshall, since the date of the report, is recorded.

The following schedule indicates the activities of the Board during the p	oast
year, with the results so far as developed:	
Prisoners interviewed and their cases considered and acted upon1	296
Prisoners granted parole	
Prisoners recommended to the Minister of Justice of Canada for Ticket-	
of-Leave	16
Prisoners convicted of crime while on parole	24
Prisoners on parole who failed to continue reporting and disappeared	41.
Prisoners who did not live up to required conditions and were returned	
to prison by the Board	30

Were it not for the Parole and Extra Mural Permit systems looking after about 600 prisoners, there would need to be another reformatory erected at once, at no small expense to the province.

It will be readily understood that the longest lists of prisoners whose cases are to be considered by the Board at any one meeting are those at Guelph, usually over 100, and at Burwash, usually fifty to seventy-five. These meetings ordinarily are held on Saturdays and occupy each a whole day, but so great is the pressure at Guelph that every meeting there now begins on Friday and the Board remains over night, and is sitting all day Saturday considering the many cases and special business brought before it.

Space will not permit giving in full the "Conditions of Parole" approved by the Minister of Justice and signed by every prisoner who goes out on parole, but the requisitions include regular work, a stated residence, monthly report, to conduct himself or herself honestly, strictly avoiding liquor, drugs and all bad habits and associations. The parole is subject to revocation on non-compliance with any of these conditions.

While all records are confidential, yet they are complete, and the correctness of the above figures can, at any time, be demonstrated. This is mentioned because of the tendency to judge of the results of parole only by those who reappear in court. These (the admitted failures) obtrude themselves in this manner on the public notice. It is important to remember that in an average year for every one who thus disappoints the expectations of the Board, there are six making their way back into good society, and shunning their past and who are maintaining themselves and their families by industry and honesty.

The Board, in the very nature of things, has to face many serious problems in the selection from among the convicted offenders of those whom it may attempt to reform, and the difficulty is securing their re-establishment as respectable citizens.

Certain classes of prisoners are very rarely paroled until they have spent at least a year actually within the restraint of an institution, such as drug addicts and drunkards; while those convicted of sexual and indecent crimes are often not paroled at all. The case of a prisoner suffering from a venereal disease is not even considered until there is a clean medical sheet.

While the Board is authorized to parole only for the period of an indeterminate sentence, it considers all cases, including those prisoners serving definite sentences, whether followed by an indeterminate sentence or not, and after consideration may recommend to the Minister of Justice that a prisoner during his definite term be granted a Ticket-of-Leave or Dominion Parole, or to the Commissioner for Extra Mural Employment of Sentenced Persons that the inmate be employed outside in custody on a permit. It also may recommend against such actions.

It should be clearly understood that the work of the Board is of a salvage nature and aims so far as may seem reasonably possible at the reformation of the prisoner and the re-establishing him or her as a reputable and law abiding citizen, or as some tersely put it, to convert the offender from a public liability to a public asset.

Without in the slightest degree presuming to criticize judicial sentences it is noteworthy that frequently these, for apparently the same sort of crime, differ greatly, some very long and others appear too short. While sentences cannot be standardized one gets the impression that there should be a greater uniformity and adequacy of sentences.

The indeterminate sentence assists materially to this end and is universally coming into more general use but in view of the fact that definite sentences are here and there given without an indeterminate sentence the Board feels impelled to call attention to the words of His Lordship Chief Justice R. M. Meredith, delivering the judgment of the Court in Rex vs. Avon 16, O.W.N. (1919) page 283, where it is said that the Magistrate "fell into the further error of adjudging imprisonment in the Ontario Reformatory for a definite period, although both Provincial and Federal legislation permits only an indeterminate period." See Ontario Reformatories Act, R.S.C. (1914) page 287, section 19, and the Prisons and Reformatories Act, R.S.C. (1906) page 148, section 44.

The Board desires to place on record its high appreciation of the valuable assistance rendered to it by many public and private citizens and especially by the officials of the above mentioned prisons. Without exception those in charge take the greatest possible interest in those committed to their care, observation being made of each prisoner with commendable caution. Their reports and suggestions to the Board are most thorough, considerate and helpful.

The Parole organization is divided into two branches:

First, the Board which hears, considers, and decides upon the case of every prisoner.

Second, the Executive Staff, consisting of Dr. A. E. Lavell, the chief officer, and his two assistants, Captain J. A. McElhiney and Mr. E. J. Etherington. These are principally engaged in investigation and supervising work. There is a large volume of correspondence. They are aided in this by an office staff of four.

The filing system is very extensive and complete. For each prisoner in any of the prisons and under his name or names a file is created. All the correspondence, reports, and other papers relating to that case are attached to it. Many files are large and contain most complete and exhaustive information. There are many thousands of files now in the office.

The "active" files consist of those cases in course of preparation, those not yet on parole and those deferred or refused, usually in all about 1,000, and also those on parole and permit, usually about 600. The "dead" files consist of those relating to inmates whose sentences have expired. These latter are put away and indexed for possible future reference. All files are, of course, strictly confidential.

The work of the Extra Mural Employment for Prisoners is also carried on in the Parole office and by the same staff.

Throughout the year there has been a continuation of complete hearty and efficient co-operation of all in the whole organization. This has contributed in no small measure to the success of the work.

GEO. S. MATTHEWS,

Chairman.

E. Coatsworth, W. A. Evans, J. F. McKinley, D. Miller, Mrs. G. A. Brodie, James B. Tudhope, F. C. Grenside, Alfred E. Lavell,

Secretary.

Sixth Annual Report

OF THE

COMMISSIONER

FOR THE

Extra Mural Employment of Sentenced Persons

For the Year Ending October 31st

1926

PRINTED BY ORDER OF THE LEGISLATIVE ASSEMBLY OF ONTARIO

ANNUAL REPORT OF THE COMMISSIONER FOR THE EXTRA MURAL EMPLOYMENT OF SENTENCED PERSONS, FOR THE YEAR ENDING OCTOBER 31st, 1926

(See Chap. 148, R.S.C., Secs. 13-16, 47 and 59 and The Ontario Act for the Extra Mural Employment of Sentenced Persons.)

1925	-6	Total for 6 years.
Permits Granted11		1,261
Custodial Failures (of the 112 granted permits)	2	54 118.693
Wages earned, all going solely to prisoners and families (cir) \$33,000 (Total cost of system during year, except service by Parole	00	\$278,000 00
Office, (cir) \$500 (Saving to the Province in Maintenance (cir) \$20,000 (\$4,500 00 \$120,000 00

Notes:

- (a) The custodial failures were less than three per cent. of those placed outside during the year. None committed a new offence. Two who were granted permits in the previous year disappeared this year. The custodial failures in the six years were about four per cent.
- (b) During the year the system was the equivalent of an institution with an average daily population of over fifty persons at a total cost for the year of \$500. This is about one fiftieth of the institutional cost of the same number of prisoners.
- (c) No salary was paid the Commissioner. The staff of the Board of Parole attended to all the necessary correspondence, etc., and gave valuable aid in supervision. They did this willingly and efficiently. Scores of private citizens and public officials gave fine service.
- (d) The number of employed outside on permit was somewhat less this year than last. This was due to several special causes. The number will, of course, never be constant as it depends always on the material, the need, and the opportunity.

Last year's report covered the full five years' experiment and dealt somewhat exhaustively with (a) the general problem of the employment of prisoners; (b) the conditions which led to the Extra Mural Employment experiment in Ontario; (c) the special problems encountered in the administration of the system which in certain very important respects was a new one in the world; (d) the principal facts discovered and solid conclusions reached in the five years. It will therefore be unnecessary to go into these details in the present report but for clearness they may be summed up as follows:

It would seem to be in the interest of all concerned that prisoners should be employed. The labour should be productive. The contract system is not good. It is desirable that part of the earnings at least should go to dependents. Whether and what wages can be paid to prisoners will largely depend upon:

- 1. The prisoner's ability and attitude.
- 2. The availability of work suited to his abilities.
- 3. The length of the term which he will actually spend in an institution and at the particular job which he has been trained to perform efficiently.
 - 4. The market and demand.
 - 5. The cost of handling.

- 6. The cost of housing, feeding and custody and depreciation and repairs of building and equipment.
 - 7. Interest on investment in plant and material.

Reformatory terms and inmates are such as make it impossible on sound economic grounds to pay wages as a policy to prisoners working inside an institution. The Extra Mural system was instituted as an attempt to make prisoners wage-earners for their families, working outside, in custody. The chief difficulty was that of custody; but by careful selection and supervision; common sense, responsibility and honour in the prisoners selected; and a due sense of responsibility on the part of public-spirited citizens who consented to act as local deputies for the Commissioner; the total custodial failures out of 1,261 granted permits in six years, was fifty-four, i.e., less than five per cent. Most of those who broke bounds or instructions were subsequently caught and resentenced, and more of these will doubtless be apprehended, unless indeed they refrain from crime and thus keep out of sight.

THE ESSENTIAL FEATURES OF THE SYSTEM

- 1. Though the prisoner is outside during his term of sentence, he is neither "at large" nor is he "released." He is not on ticket-of-leave nor is he paroled. His status is not changed by the permit, nor is the sentence.
- 2. He is placed outside solely for "specific employment" (see 148, R.S.C.) sections 13-67 and 47. Illness, sentiment, doubt as to the wisdom of conviction or sentence, services to the Crown, or other similar matters do not enter into the decision. These points may be taken into account when a case is being considered for clemency by the proper constitutional authorities, but not by the Commissioner for Extra Mural Employment.
- 3. The earnings of the prisoner outside on permit go wholly to him and his dependants and not to the Province or to any official. This is a far cry from the contract system under which all earnings went to government and contractor.
- 4. The Commissioner has complete custody of the prisoner and can appoint a local deputy to act on his behalf with custodial powers. The co-operation received by the Commissioner from judges, magistrates, police, clergymen, Salvation Army officers, and many other responsible citizens has been most gratifying and effective. They have taken charge of prisoners voluntarily and without expense to the public and have done splendid work.
- 5. The assistance received from the Board of Parole and its staff has been invaluable.
- 6. The system is based fundamentally on the presumption that when a prisoner's liberty is taken from him this time should be used, with a view to the fact that he will eventually be a free man. It takes it for granted that while the offender needs institutional treatment for at least a while, there is a psychological time after which this is needless, ineffective and harmful to prisoner and public and that at that time it is best for all concerned that he be placed to work outside on a permit instead of inside. It also presumes that whether inside or outside he shall be occupied to the best economic interest of himself and the public.
- 7. Fortunately, public opinion in Ontario is such that though the Commissioner is a provincial appointee and has to receive authority in each case from the Lieutenant-Governor in Council, no attempt whatever has been made by the Council or any member of it to use political or other pressure upon him.

THE ADVANTAGES OF THE SYSTEM

The difficulties and dangers of the system were fully dealt with in last year's report and there would seem to be no special object in restating them. But it is important that its benefits should be clearly grasped. They may be again stated, therefore, as follows:

1. The saving of suffering and punishment to many innocent dependents of offenders.

The family is an organic unit. There is much suffering brought upon the other members by the one who goes wrong and which is unescapable. Nothing can be done to alleviate it. But some kinds of hardships bear upon innocent dependents of offenders which can be lifted, at least to some extent, and which should be taken off their weak shoulders. In ancient days a whole clan was wiped out, including women and children, for the misdeed of one member. We abhor this but are guilty of similar cruelty when we seize and imprison a man who was the only support of his family and make no attempt to provide for its needs. The Extra Mural Permit System of Ontario is by no means a panacea but it does meet this need in many cases. Instead of offering cold charity or kindly philanthropy or municipal doles to those left destitute it gives the criminal himself the opportunity to save his family from want. It does this without expense, but rather a considerable saving, to the Province and with no sacrifice of the just demands of the law. Unless and until some better plan offers it would seem right and proper to maintain and develop this.

There are some who repudiate the responsibility of the public to provide for the family of a prisoner and call it a sentimental interference with the course of justice. They point to the flaws in a system which no one claims to be perfect. They point to the man's offence against society. He stole a car, or forged a note or committed some other crime. He should be imprisoned and kept in prison, they say, no matter what suffering is entailed to others. He did the deed. public was wronged thereby. Why should the public bear any of his family responsibilities? Such is the attitude, fortunately, of but a few. It is plausible, but one-sided and heartless. A frail wife and her little children have surely had trouble enough from the conviction of the husband and father. Why add to this by inflicting financial and physical suffering upon these innocent persons if it can be avoided? (It sometimes cannot be avoided). To protest against this is surely not sentimentality but real and reasonable humanity. By what ethical right can these persons, wholly guiltless of wrong-doing, be included in the penalty quite properly inflicted upon the criminal himself, unless there is no escape from this?

2. Magistrates and judges are freer to give adequate sentences knowing that so far as it can be arranged in the public interest, the suffering of needy and innocent dependents will be alleviated.

3. The guiding of many offenders themselves to re-establishment at the end of their sentences, through the channel of work for themselves or for their dependents outside as if they were free men, and apparently under the conditions of free men, though they are well aware that they are not free but are strictly accountable and in all essentials are under control by the Province.

Time alone can determine how far this is permanently effective. The five years' experience is not sufficient to show whether the re-establishment of those granted permits is lasting. The results so far give hope of a rather small number of failures but it is not wise to mix hopes with facts. I think it may be said, however, that the psychology of the statement is sound.

4. The financial advantage to dependents, to municipalities or philanthropic agencies who otherwise would find it necessary to support the dependents while the prisoner was serving his term inside, and to the Province which is saved almost the whole cost of guarding, housing and feeding him. The cost of each prisoner inside the reformatory is about \$400 a year. The full cost of each prisoner who was granted a permit in the past six years averages less than \$15 a year. This, in a permanent system, worked in conjunction with our parole system, need never amount to over \$60 a year. It might be considerably less than that figure.

No new type of difficulty was encountered during the year, though, while the problems are always essentially similar, they differ much in detail. One of the failures this year was that of a prisoner with several previous convictions who had been given two years in the reformatory by a justice of the high court for false pretences. The trial judge recommended that he be employed outside on a permit in order that he might recoup his victims. The Commissioner consulted with the Board of Parole and it was agreed by all that this would begin a policy which had been found impracticable in the parole system, and that N's success under the permit system was very doubtful.

However, he had a dependent wife. After a year's imprisonment he was therefore placed outside to support her and also, as far as possible, recoup his victims. For some time he made an honest attempt, but he had a smooth liar of a father and his wife proved unfaithful to him, and these factors, with his past, proved too much for him. He escaped to the United States. We caught him but he was able to prove his American citizenship through a short term in the American army some years ago; we therefore had to let him remain in "the land of the free." One clear gain for this country lies in the fact that he will certainly remain out of it, as a warrant awaits him here with a possible penetentiary sentence.

During the year a question was raised which I had thought had been made clear in last year's report. It concerned the relation of the Commissioner to the Council and how far the Council would deem it necessary to go into the details of his recommendations. There would seem to be no possible doubt that the Commissioner is responsible directly to the Council. He has no power except that given him by the Council. But if Council is to undertake the actual making of decisions in each case it has a very heavy task on its hands. made clear in the last report. No commissioner would then be needed. A clerk would get the information which could all go to council and a decision be given. But before such a step were seriously considered, page 8 of last year's report should be carefully read. After the Dominion law had been on the books for ten years, it was practically a dead letter until a commissioner was appointed to act for the council. It may indeed be dangerous for council to entrust such matters as this to an officer, but the alternative is more dangerous. The whole question is entirely a practical one. The council has to trust its officials for decisions in innumerable matters. The only vital decision for Council would seem to be as to the advisability and efficiency of the system and in the selection and continued efficiency and reliability of a commissioner. The actual decision as to the employment of John Doe outside in custody would seem to be a proper one to leave to an official. This matter is so fully stated in the former report as to make repetition superfluous.

No commissioner should or would deliberately hold back information from council, which has the right to know all it wishes to know about any and every case. Hitherto the location of the commissioner's office has made it not only

inconvenient but dangerous to send files to the parliament buildings if these are asked for by council, but in the new offices at the buildings he will be available for call by the council if required and can of necessity come personally with files to explain or make fuller presentation of his reasons for recommendation.

Personally the Commissioner wishes there were some practicable way of having the responsibility of decision shared by others. It is a very heavy one and he only shoulders it because of the public service involved and because he can at present see no other course. In most cases he asks the valued counsel of the Board of Parole which has personal knowledge of the prisoner. The advice of custodians is also sought and this is frankly given. But neither the Board of Parole nor any good custodian desires or would take the responsibility of the final decision, nor can this be wondered at, especially in the light of page 8 of last year's report.

However, in spite of the responsibilities and labour involved, the compensations are well worth the burden and the effort. Human liabilities have been turned into assets; hundreds of innocent and dependent women and children have been saved from undeserved suffering; facts have been noted and recorded which will assist future criminologists in further solving the problem of the proper treatment of the law breaker; the province has been saved a fair sum of money; and the Commissioner has had the great pleasure of coming into intimate fellowship with hundreds of intelligent, sane, public spirited citizens who have efficiently and sagaciously acted as his local deputies in supervising lawbreakers working outside "on permit."

It has been suggested that before a permit is granted, the trial judge or magistrate should give his approval. Experience does not seem to justify this. When a parole is considered, reports from the courts are always asked for. In most cases also when permits are considered a report from the court as to the facts is laid before the commissioner. Though some judges and magistrates unfortunately confuse the permit with executive elemency (few now make that error) a permit does not mean any change whatever in the sentence or the legal status of the prisoner.

Able judges and magistrates who clearly know and grasp the idea of the system decline to offer any comment on the advisability of a permit. They point out that courts are given power to find a prisoner guilty and to sentence him to a term in prison, but, except for the term "with hard labour," or corporal punishment, or death, the *treatment* which the prisoner will receive is deliberately placed by law in other hands. They feel that they have quite enough responsibility and that the law has properly placed the burden of the prisoner's treatment on other shoulders. It is felt further that for courts to decide whether a prisoner ought to be placed outside to work would involve knowledge of some facts quite outside their powers to get, and would mean inequality and injustice in decisions.

The full responsibility of placing a man outside to work on a permit rests therefore upon the Lieutenant-Governor-in-Council as decreed by law. For practical purposes the council appoints a commissioner to advise it and practically to deal with the question on its behalf, though always accountable, in every point, to it. Thus there is unity of decision based on the same fundamental principles for every provincial prisoner in the whole province. This in no way denies the full legal power of right of the council to decline to accept the commisioner's recommendation. He may not have a more intimate knowledge

of facts and persons and issues than the council, but since he is appointed by council for this very purpose, it would seem that he would probably have better knowledge. If he has not, he is not attending to his work and should be replaced.

Readers of this report who may wish fuller knowledge of the principles and facts on which both the parole and permit systems are based, and some explanation of these, may be referred to the book recently published by the Ryerson Press, Toronto, on "The Convicted Criminal and his Re-establishment as a Citizen."

> ALFRED E. LAVELL, Commissioner.

FIFTY-SEVENTH ANNUAL REPORT

OF THE

INSPECTOR OF PRISONS AND PUBLIC CHARITIES

UPON THE

Hospitals and Charitable Institutions

OF THE

PROVINCE OF ONTARIO

BEING FOR THE YEAR ENDING 30th SEPTEMBER

1926

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY OF ONTARIO

Hospitals and Charitable Institutions

In presenting the fifty-seventh annual report on the Hospitals and Charitable Institutions for the year ending September 30th, 1926, I beg to state that there are at present in Ontario:—

- 140 Public Hospitals, including 12 Sanatoria for Consumptives.
 - 70 Private Hospitals.
 - 42 Refuges.
 - 30 Orphanages.
 - 3 Convalescent Homes.
 - 31 County Houses of Refuge.

These have, as far as possible, received official visits of inspection during the year, and those entitled to Government aid in accordance with the Statute have shared in the Grants voted by the Legislature for Hospitals and Charities.

THE HOSPITALS

The record of the year indicates the continued success and progress of the
Hospitals of Ontario:
Number of patients in the hospitals, October 1st, 1925 8,072
Number of patients admitted during the year
Number of births in the hospitals during the year
Total number under treatment during the year
The above figures do not include those who received medicine and treatment as outdoor patients.
Number of deaths during the year
Number of deaths during the year
Percentage of deaths to number under treatment
Percentage of deaths to number under treatment
Percentage of deaths to number under treatment
Percentage of deaths to number under treatment
Percentage of deaths to number under treatment
Percentage of deaths to number under treatment
Percentage of deaths to number under treatment

Provincial Aid to Hospitals

- 1. A Provincial grant is made for all patients in a hospital during the first ten years of its existence at the rate of fifty cents per day, irrespective of what sum is contributed by the patients themselves.
- 2. After a hospital has been in existence for ten years the grant is paid only for patients for whose maintenance \$10.50 per week or less is contributed.
- 3. In all cases the limit is 120 days, and if the patients remain in the hospital longer than that period the refuge rate of ten cents per day is allowed.
 - 4. No allowance is made for infants born in hospital.

AID TO SANATORIA FOR CONSUMPTIVES

- 1. A grant of \$4,000 on the erection and satisfactory equipment of the necessary buildings.
- 2. A grant of seventy-five cents per day for the maintenance of each indigent patient.

These grants to be in consideration of proper accommodation being provided, and only to assist in the maintenance of indigent patients coming from the Province of Ontario. There were 3,581 patients cared for in the ten different Sanatoria for Consumptives during the past year.

THE YEAR'S WORK IN THE HOSPITALS

The number of patients cared for in the Public Hospitals of Ontario during the past year was 172,806.

The total expenditure for maintenance and equipment during the year was \$9,348,302.43.

TABLE I.—Showing the general movements in each hospital separately.

ORPHAN ASYLUMS

The statistical tables on the following pages of this report show an increase in the contributions to several of the Institutions, while in some cases there is a falling off as compared with last year.

The total number of children cared for in the Orphanages during the year was 4,682, as

compared with 4,691 in 1925.

In the tables will be found full details of the receiving and discharging of children, etc. The statistics relating to the sex and previous residence of the inmates are given in the following summary:

TABLE I.—Schedule C—Orphanages.

Fifty-ninth Annual Report

OF THE

Inspector of Prisons and Public Charities

UPON THE

Prisons and Reformatories

OF THE

PROVINCE OF ONTARIO

BEING FOR THE YEAR ENDING 31st OCTOBER

1926

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY OF ONTARIO

TORONTO
Printed and Published by the Printer to the King's Most Excellent Majesty
1927

INTRODUCTION

In presenting the 59th Annual Report of the Reformatories and Prisons of Ontario there is little to remark in the way of either increase or decrease in population. Compared with 1925, there were ten more persons sent to gaol in 1926, or a total of 18,033 persons, and this will explain the additional cost of gaol maintenance, amounting to \$4,925.34. The daily average cost per prisoner has decreased from 52.14 cents to 46.64 cents or about 5.50 cents per day.

Crimes against public order increased by 509 and were responsible for over 56 per cent. of the gaol population. About 37 per cent. were temperate and 61 per cent. intemperate. There were about eleven times as many male persons as there were females and about 87 per cent. had some degree of education and 13 per cent. could not read or write, which may be accepted as evidence that education in itself is not a saving quality for human frailties. Notwithstanding all the agencies in active operation in Toronto for the reform of human beings, this city sent 7,264 persons to gaol in 1926 or 42 per cent. of the commitments in the province. The crime of rape has always remained in the same class as murder and if this crime is to be penalized by the death of the criminal it will be interesting to know that in 1926, that seventy-three persons were committed for rape.

It is apparent from the foregoing recital that whatever else may be stationary or decreasing, crime is a progressive factor in our national life. It has come uninvited and remains unwelcome. Within a generation it has wrought many changes in all departments,—in business, in education, in the church, in the courts, in society and in family life; and if we diligently seek for its cause we will probably find it in a desire for material gain without the desire to honestly work for it. Material development has outstripped the development of moral or spiritual growth.

In business the old problem of labour and capital remains unsolved and lawlessness and crime arise therefrom, as well as from the conditions of unemployment and idleness, and idleness almost invariably leads to crime.

Education has attacked the problem with its Industrial Schools, its Auxiliary Classes and its Welfare Boards, but even in the world intellectual there are many school problems dealing with the abnormal boy and the wayward girl that are passed on to the common gaol for solution.

In society there is an ever-increasing list of social agencies to restrain and elevate the erring individual, but without discounting their value, the criminal still flourishes and fills our penal institutions.

The law courts have been extended to include a Juvenile Court and a semijudicial body known as the Parole Board, but the fact remains that crime continues to flourish and the solution is not yet apparent.

H. M. Robbins,

Deputy Provincial Secretary.

Fifty-Ninth Annual Report

UPON THE

Gaols in Ontario

In presenting the Fifty-ninth Annual Report of the Gaols of Ontario, I beg to submit the following statistics for the year ending September 30th, 1926.

(1)	Number of Gaols in Ontario	47
(2)	Total expenditure for Gaol maintenance in Ontario: In 1925. \$30 In 1926. \$30	
	Increase\$	4,925 34
	The cash revenue from Gaol labour during 1926 waned at Kingston and Ottawa.	as \$2,384.21, and
Ave of Ontai	erage cost per day for maintenance of each prisoner in rio was: In 1925	•
	In 1926	
(4)	Number of persons committed to Gaols during the partial in 1925	18,023
	Increase during the past year	10
	Commitments for murder in 1925 Commitments for murder in 1926	33 16
	Decrease	17
	Commitments for manslaughter in 1925 Commitments for manslaughter in 1926	19 37
	Increase	18
Сол	nmitments for crime against the person: In 1925 In 1926	637 681
	Increase	44

Commitments for crime against property: In 1925 In 1926	4,072 3,844
Decrease	228
Commitments for crime against public morals and decency:	
In 1925	720
In 1926	650
Decrease	70
Commitments for crime against public order and peace:	
In 1925	9,526
In 1926	10,035
Increase	509
Number of insane committed to Gaols:	
In 1925	347
In 1926	298
Decrease	49

Prisoners sentenced to the Penitentiary during the past year show a decrease of 15 as compared with the previous year, while the number transferred to the Reformatories was 645 less than in 1925.

Number of prisoners sentenced in 1926	11,371
Increase	65
The percentage of sentences to commitments was:	
In 1925	62.7
In 1926	63.1

Number of prisoners sentenced in 1925.....

The number of prisoners sentenced to terms over one year was 112 mere than during the previous year.

The number confined in penal institutions of Ontario was 71 more on September 30th, 1925, than on the same date last year.

Of those committed during the year, 7,132 were married and 10,501 were single.

Habits of life of those committed to Gaols:

In 1925, number of commitments, 18,023; temperate, 7,260; percentage, 4.2. In 1926, number of commitments, 18,033; temperate, 7,062; percentage, 3.1. 13.23 per cent. of the prisoners committed to the gaols during the past war

could not read or write.

Number of days' stay of prisoners:

					 ,
Showing	can i	ncreas	e of da	VS	 5 572

Escapes and captures:

Thirteen prisoners escaped during the year, of whom nine were recaptured.

Deaths in Gaols:

INDUSTRIAL FARM, FORT WILLIAM

December 1st, 1926.

I have the honour to present herewith the annual statistical report for this institution for the year ending October 31st, 1926.

There has been very little variation in our commitments as compared with the previous year. We had 308 men committed in the fiscal year ending October 31st, 1925, and 312 in 1926.

The general health of the population has been good throughout the year. We have had no deaths or epidemics and only a minimum of sickness of any kind.

We have been able to keep all our population busily employed during the year and as a result the discipline has presented few problems. In addition to the routine of the farm work we have cleared and brought under cultivation thirty acres of heavy bush land.

The growing season has been good and our acreage in crop gave heavy yields, but owing to the extremely wet fall considerable difficulty was experienced

in saving our grain, root and silage crops.

Our Holstein herd is gradually being improved by breeding and selection. During the past year the herd was entered in the Record and Performance work supervised by the Dominion Department of Agriculture and the cows that have finished their test have shown a high average yield. One cow, "May Queen Rauwerd," has an official record of 30,036 pounds of milk for 365 days. The surplus young stock from this herd is sold to the farmers of the district as foundation breeding stock and in this way the class of dairy cattle in this area is gradually being improved.

The guards of this institution are to be congratulated. For the first time on record there have been no escapes from this institution during the fiscal year.

I am glad to take this opportunity of expressing my appreciation to your-self, the officers of your department and the staff of this institution for courteous and efficient assistance in the carrying on of the work here. The local unit of the Salvation Army, Rev. D. McIvor, and various other local organizations have contributed materially toward the social and religious welfare of the population and are deserving of our thanks and commendation for the good work that has been done.

H. M. McElroy,
Superintendent.

The Deputy Provincial Secretary, Toronto.

TORONTO MUNICIPAL FARM

Langstaff, Ont., December 10th, 1926.

A. R. McPherson, Esq.,

Inspector of Prisons,

Parliament Buildings, Toronto, Ont.

Sir:--

I have the honour to submit herewith my tenth annual report and in doing so I wish to point out that this has been one of the most successful years in the history of the institution from a medical and health standpoint. The medical statistics for the year showing a reduction in alcoholism, drug addiction, epilepsy, insanity; a slight increase in tuberculosis and other diseases with a marked reduction in surgical and other cases and there has been no epidemic disease during the year; in the venereal diseases department there is a marked decrease in the number of cases compared with preceding years.

During the year under review, 2,832 males, an increase of eighty-four, and 222 females, an increase of two over the previous year, passed through the institution; there were nine deaths, all of aged men; there was only one escape from the institution during the twelve months; this one was traced across the

border where trace of him was lost.

The discipline of the institution remains excellent, only twenty-four cases

being tried in the orderly room during the year.

I have the honour to call to your attention again the recommendation made last year for the sunroom tuberculosis ward over the verandah at the south end of No. 1 Building. There has been an increase in tuberculosis this year and the need is now more apparent.

A tubercular patient should not be domiciled in the same dormitory with others and should sleep in a cold room. As our accommodation is limited it is necessary now to house contagious T.B. cases with other inmates in the

dormitories.

I beg to bring to your attention the fact that the executives of this institution are not paid on a scale equal to other institutions in the Province; the sergeants (day and night) being on the same basis as the guards under them, while other executives are the lowest paid of any institution in the Province. This is due to the dual control system and an attempt should be made to have this corrected

as the principle is not sound nor conducive to good management.

This institution, unlike others in the Province, does not come under the jurisdiction of the Ontario Civil Service Commission for retiring allowances, etc. There is no principle established on which an aged employee can be retired after many years of service and this necessitates the keeping on the pay roll men and women past a safe period. This feature should be brought to the attention of the Civil Service Commission so that the institution may be co-ordinated with others for pay, promotion and retiring allowances.

I would again point out that there are a large number of prisoners who are continually in the courts for the same offences and the sentences given are very short ones; this does not give much opportunity for reformative work in

such cases.

In conclusion, Sir, permit me to thank you and other officers of the Department for your continued interest in the welfare of the institution which is sincerely appreciated.

I also wish to again thank publicly all those earnest workers who have continued their efforts for the spiritual and social well being of the institution; among these I beg to mention Canon J. C. Davidson, Church of England; Adjt. Moat and Captain J. A. McElhiney, of the Salvation Army; Mr. Woolnough and other workers of the Christian Science Church; Mr. Fred Graham and members of the Y.M.C.A.; Captain T. C. Flanagan and friends who provided a turkey dinner for the old men of the institution at Christmas, and Mr. J. P. Bickle who provided a moving picture machine for the use of the institution; to all of these and many others I wish to express my gratitude.

All of which is respectfully submitted.

I have the honour to be, Sir, Your obedient servant,

W. J. MORRISON,
Superintendent.

MERCER REFORMATORY

Toronto, December 9, 1926.

Sir:-

I have the honour to submit the annual report for the Andrew Mercer Reformatory for the year ending October 31st, 1926.

These statistics vary but little from those of a year ago. While the number of entrants, 129, is less than the number, 196, for the previous year, the average daily population has not decreased. The short term of six months seems still in favour with some magistrates, in spite of repeated statements that short terms are of little advantage to the prisoner in an institution of this character.

The following statistics of the ages of the women received here are a sad commentary on the care being given to growing girls. During the year just closed, 39 of the 152 received were in their 'teens, 70 were between the ages inclusive of 20 to 30, 32 between 31 and 40, 9 between 41 and 50. There were only two over 50 years of age.

The commitments show the large number of 22 committed for being keepers of houses of ill-fame—usually places where liquor also is sold illicitly. There are 67 guilty of offences that practically mean prostitution, and 11 for neglect of children.

Regarding those released from the institution, I beg to draw your attention to the fact that there is no follow-up work for these too often friendless ones who require, at the time of leaving the institution more than at any other time in their lives, an earnest, helpful friend. You will note that 15 only of the 124 released during the year were placed on parole. For these 15 there is no supervision of a woman officer, and the 109 were without supervision or restraint of any kind.

A very much better condition prevailed regarding those discharged from the institution when we had a field officer on the staff of the Reformatory. This officer had an opportunity of studying inmates as they served their sentences in the Reformatory. She was acquainted with the causes of their coming to this institution, she visited their homes, knew their former environments, and she was thus able to advise wisely and protect them from many of the dangers and temptations which had brought about their fall. In the case of those parolled, she was in very close touch with their employers, was able to counsel the

employer in any difficulty, and also protect the employee from any injustice. Since the Board of Parole is averse to employing a woman parole officer, I strongly recommend that the position of field officer be re-opened in this institution, so that all women discharged can be properly helped, warned, and, if necessary in the case of those parolled, returned to the institution for further correction.

I regret that this report registers the death of three members of the staff—Mr. Caston, November 27, 1925, who was killed while on his way to his duties as night-watch in the institution; Mr. Wm. McGee, whose death occurred April 26, 1926. A respected and efficient member of our staff, Miss Ainslie, after a short illness, was called to her reward on May 23, 1926.

The friends of the institution have been thoughtful in giving treats to the inmates during the year, and I take this occasion to thank them most heartily.

I have the honour to be, Sir,

Your obedient servant,

EMMA O'SULLIVAN,

Superintendent.

The Honourable Lincoln Goldie, Provincial Secretary, Parliament Buildings, Toronto.

REPORT OF THE SALVATION ARMY

The work carried on by the Salvation Army for prisoners and for their families deserves special recognition. Much of this work cannot be described either by figures or by words. Its value is social and spiritual rather than financial or statistical. It is sufficient to call attention to a few of the outstanding features which are significant of the wide field of their operations.

THIRTY-THIRD ANNUAL REPORT

NEGLECTED AND DEPENDENT CHILDREN OF ONTARIO

FOR THE YEAR

1926

Dealing with the Children's Protection Act, the Unmarried Parents' Act, and the Legal Adoption Act

Toronto, February 28th, 1927

To His Honour William D. Ross,

Lieutenant-Governor of the Province of Ontario.

May it Please Your Honour:

The undersigned has the honour to present to your Honour the Thirty-third Annual Report under The Children's Protection Act of Ontario, and the Fourth Annual Report under The Adoption Act, 1921, and The Children of Unmarried Parents' Act, 1921.

Respectfully submitted,

L. GOLDIE,

Provincial Secretary.

Toronto, February 25th, 1927

HONOURABLE LINCOLN GOLDIE,

Provincial Secretary,

Parliament Buildings, Toronto.

SIR,-

I have the honour to transmit herewith the Thirty-third Annual Report under The Children's Protection Act of Ontario, and the fourth annual Report under the Adoption Act, 1921, and the Children of Unmarried Parents' Act, 1921.

I have the honour to be, Sir,

Your obedient servant,

J. J. Kelso, Superintendent and Provincial Officer.

INTRODUCTION

This work for the neglected and dependent children of Ontario has now been carried on for thirty-four years, and the knowledge gained through the experience of this long period is helpful, yet there are ever new problems demanding solution. As no one human being is exactly like any other human being, so their problems are not exactly the same, though there are points of similarity, and experience gives one a key to these problems which it would be difficult to obtain in any other way. During these years the Children's Aid Societies of the province have had placed under their care a total of 26,557 children, and have touched, more or less effectively, the lives of probably ten times as many more. For many years the Children's Aid Societies and industrial schools performed the work of dealing with the neglected, dependent, and delinquent children of the province, and then two Acts were placed on the Statute Book which are practically extensions and co-relatives of the Children's Protection Act, under which the Children's Aid Societies do their work. These new Acts are: For the Protection of the Children of Unmarried Parents, and respecting the Adoption of Children. The "Unmarried Parents' Act," is for the assistance of unmarried mothers who may bring suit through the provincial officer against the putative father of their child, and if his responsibility is established, he is assessed a certain amount per week, or a lump sum, which is used for the maintenance of the child. The first apparent effect of this legislation is that the father of a child born out of wedlock is made to bear a share with the mother of responsibility for their wrong-doing, and the public does not, as in the past, bear the entire cost for the rearing of these children in orphanages and charitable institutions. The Act for the Adoption of Children has the effect of quieting the apprehensions of some foster parents who have taken children with the intention of rearing them as their own, and who have constant fears that their child will be taken from them. When the child is legally adopted to them, these parents may go ahead with their plans for the future, the same as they would if the child had been born to them.

It is gratifying to know that this work of the Children's Aid Societies and kindred activities continues to be well supported by the public generally and by those who enroll themselves as members. The list of chief officers of the fifty-five Societies engaged in the work, which will be found in the body of this report, is an illustration of the fact that Christian and all other manner of men and women are united in an effort to combat the effects of misfortune, neglect, and evil environment in childhood which, in too many cases, have as a result, a manhood of dependence, bad conduct and crime. These latter, in addition to the evil effect they have on the community, are costly to an extreme degree.

One is sometimes a little discouraged with the results attained after all these years of effort, but one is also appalled by the thought of what would be the conditions without these efforts. Life is more complicated now than it was a few years ago, and for every effort put forth to combat a bad condition, another evil

springs up in its place. Especially is this so in large centres of population which have so many sources of distraction from all of which it is impossible that children may be immune.

However, there are almost innumerable cases of positive good accomplished in the lives of those children who have been brought under the care of Children's Aid Societies, and there is no doubt that the twenty-six thousand children who have been made wards of these societies have had their chances for the future bettered by the work done for them.

In computing the proportions of this work, it is well to bear in mind a remark made by Kipling in the preface to one of his earlier volumes of stories about India. He said, in effect, it might be thought because of the complexion of these stories that conditions among the people whose lives he was portraying were not very elevating, but that he was telling some of the unusual stories and if one were to carefully sweep out the corners of a room which might otherwise appear clean, one would likely gather together an impressive quantity of dirt. Similarly there is a lot of evil and wrong-doing in the world, but the people are in the main honest, right-living, generous, and charitable, and if it were not so we would be in a bad way.

Before finishing this introduction it would be well to emphasize that the chief work of Children's Aid Societies is an endeavour to keep families together and, as far as possible, to prevent their disruption by making neglected children wards of their societies or committing delinquent children to reform schools. This is a very satisfactory and important part of their work, the results of which do not show in figures, but it has a far-reaching effect and is carried out faithfully by the fifty-five local officers of Children's Aid Societies who are supported and advised by the better element of the communities of which they form a part.

JUVENILE DELINQUENTS

Juvenile delinquency is a serious problem, and it is obvious to all persons interested in child welfare that in the smaller municipalities the local superintendent of the Children's Aid Society is the best fitted person to deal with the children who have in a greater or lesser degree broken the law. This officer through his association with the people of the district comes directly in contact with the home, and this is usually the source of delinquency. The parents are so often indifferent to their responsibility and permit their offspring to associate with any one whom they meet. There is no restraining influence brought to bear upon the child, the result being a drifting with the tide, which carries them on until they land in the children's shelter or the juvenile court. The value of the Children's Aid Society is recognized by all juvenile court judges, who are men interested in the reclamation of the delinquent child, and are anxious that each child shall receive just and fair treatment. Their judgment as to the value of the Children's Aid Society as a buffer has been more than proven, when instead of

a committal to the industrial school they have ordered the delinquent child to report weekly to the local superintendent.

An illustration: At one society's office, sixty-five children had to visit weekly and have their cards signed by the superintendent. Any of these boys might have been sent to the industrial school, but a wise judge and a sympathetic local superintendent had saved these children from the disgrace of a reformatory term.

Recently a young girl of fifteen was brought before the court as incorrigible. The girl was placed in the care of the Children's Aid Society and transferred to the Provincial Superintendent who was able to place the girl in a splendid home where she is making good. Wisdom and good sense has saved this girl, giving her the chance to redeem herself.

The following Juvenile Courts have been constituted in Ontario though there are many places where the work is being done without the Juvenile Delinquents Act being proclaimed:

Judges-H. S. Mott, Toronto.

S. Atkinson, Timiskaming.

J. A. Makins, Stratford and Perth County. J. J. A. Weir, Kitchener and Waterloo County. Judge A. D. Hardy, Brantford and Brant County.

J. F. McKinley, Ottawa. J. R. Blake, Galt.

A. D. Creasor, Owen Sound and Grey County.

Rev. G. Quinton Warner, London and Middlesex County.

A. D. Bowlby, Windsor, Walkerville and Ford.

C. A. Reid, Goderich and Huron County.

Judge Campbell, St. Catharines and Lincoln County. Col. I. G. Massie, Dunnville and Haldimand County.

PAST AND FUTURE

The aim and motive of the Children's Aid Society for the thirty-four years of its existence has been, an opportunity for every child. There has been no deviation from this course, hewn out at the beginning. The seed sown at the outset has produced a tree whose branches represent all the activities that have been beneficial for the child and the normal home life. Juvenile courts, Mothers' Allowance Act, Workmen's Compensation Act, Legal Adoption Act, and Unmarried Parents Act. In addition to these, medical examination of children and free dental clinics have been brought into effect in the schools of the province-The Children's Aid Society has always been a domestic relations court, and many families have been rehabilitated through the sound judgment of our local superintendents, who realize that it is in the best interest of the province to keep the home intact and the province and municipalities have been saved many thousands of dollars yearly. There is much to be done, but the future is bright, as the several Acts are being put into effect. Indifferent parents are realizing that they must care for their children or face the risk of deprivation. The fear that the child may be removed acts as a strong incentive to make one more effort, and in many instances, the last effort is a successful one.

CHILDREN MADE WARDS

The number of children made wards of the societies by order of the courts during 1926 was 809, of which number 620 were Protestant and 189 Roman Catholic.

This makes a total of 26,557 children made wards since 1893 in addition to 65,500 children indirectly provided for in various helpful ways.

Protestant children visited and reported upon during 1926, 5,921. Roman Catholic children visited and reported upon during 1926, 898.

WELFARE OF CATHOLIC CHILDREN

During 1926 there were 186 Roman Catholic children made wards of the Children's Aid Societies of the province. These children are under the supervision of Mr. William O'Connor. Part of his duties during the year was reporting upon 750 children, who were personally seen and a number of special cases reported upon, together with general information regarding local societies, shelters, etc. In doing this work he travelled 6,000 miles by rail and 2,000 miles by motor. In addition, he assists in obtaining foster homes for the Roman Catholic wards, and advises foster parents and the Department generally in regard to this particular class of children.

It is sometimes difficult in the case of Roman Catholic, as well as Protestant children, to place them satisfactorily, and where the home does not fit the child, nor the child fit the home, it means a lot of extra work for all concerned. However, there is compensation for some disappointments in this work in observing the real feeling of affection which grows up between children and foster parents in almost every case where the child has remained in the foster home for any considerable length of time. When a boy—it is usually a boy who has the daring independent spirit—has been in a foster home for a long time; he would like to try his wings and see what he can do on his own account. He may leave with or without the goodwill of his foster parents, and there may be what one would call a "strained feeling" between them because of the lad's apparent lack of appreciation of what has been done for him, but in practically every case the lad feels free to return to his foster parents' home for a visit when he desires, and they assure him and the Inspector that the boy may make his home with them any time he is out of employment. This is just an exemplification of the fact, which everyone engaged in this work knows, that the human element enters into it largely, because one is dealing with human beings.

This work of the Children's Aid Societies is the most encouraging in which governments, municipal, provincial, national, or private individuals may engage.

It lifts children out of conditions and from an environment in which the wisdom of experience suggests that if not removed they will most certainly become a burden, if not a menace, to the public, and places them in an environment where their opportunities to become industrious law-abiding, God-fearing citizens are enormously increased.

CHILDREN'S SAVINGS

Trust accounts are opened by the various societies for children who have money coming to them from pension funds or personal earnings. A complete list of these accounts is filed with this office, and totals for last year the sum of \$95,000.

LEGAL ADOPTION ACT OF 1921

The great benefits conferred by the Adoption Act continue to manifest themselves in the popular approval with which this measure has been received and the expressions of thankfulness that almost daily come from foster parents. Five years is scarcely long enough to judge the value of this Act because its effects are so far-reaching. The future of the child is decided very largely by the home, but we cannot determine the effect of the child's association upon the home and family. The number of orders granted, however, shows that the Act is in favour with the public.

There are two considerations:

(1) The child for whose placement some organization is responsible.

(2) The child already placed in a home in a private way, with which no organization is concerned and where it is a strictly private matter between the applicants and the provincial officer, who may use any means at his disposal to investigate the propriety of such an adoption.

From July, 1921 to the end of the calendar year 1926, there have been 3,489 orders of adoption granted. Of these, fifty per cent. were wards of Children's Aid Societies, most of whom had been in foster homes and supervised for years, having been placed under the Children's Aid Indenture or Foster Child Agreement, and in many instances the foster parents thought the child was fully adopted under this old form of agreement. When made acquainted with the new law they have been most eager to avail themselves of it for the child's sake, even more than their own. In such cases a further application is made, the Children's Aid Officer recommends the adoption and the Society consents as the legal guardian.

The Soldiers' Aid Commission have made it their policy to secure legal adoption for children placed in approved homes who have undergone varying years of supervision.

The Jewish War Orphans Committee has placed several children from the war-stricken areas of Europe, the majority being from Poland, and the foster parents have availed themselves of the Adoption Act. Some children are brought here from Europe by relatives without the aid of any organization, and there are certain documents in foreign languages to be interpreted.

Throughout the province, applications for adoption are usually investigated and approved of by the Children's Aid Superintendents who are the local representatives of the Provincial Officer.

In adopting a child as their own, some applicants enquire fully into its history, that they may be in a position to guard against wrong tendencies, yet there are many fine people who do not ask to know anything about the child's history, fearing they would always be looking for faults. They want to love the child unreservedly and prove that environment and careful training surmount heredity.

Regarding the question of residence—it is provided by the Act that the child should be in the home for two years before legal adoption is completed. This delay is unnecessary in certain cases, for instance, where the child is being adopted by relatives who offer an excellent home and do not want to wait for two years before securing an order of adoption. Why should not the child be absorbed into this family at an earlier date, if it is established that it is to the advantage of the child to be in that home.

The adoptions which come under the second heading are much more interesting from the legal point of view. It would be necessary to go into the detail of

almost every application to give any adequate idea of the work involved. Some are quite complicated. Our form of order reads: "and it also appearing that there is no person known to be entitled to notice of this application." This demands care that all the requirements regarding consents are met or particulars submitted which show that the consents may be dispensed with. This information is prepared in the form of a declaration. Facts relating to the existence of persons whose consents are required by the Act must be clearly set forth as the order of adoption must be free from doubt as to its validity.

Section 5, sub-sections (c) and (d), have been invaluable in securing to foster parents legal rights with respect to the child for which they are caring. This section provides for the dispensing with the consent of a parent, who, for instance, has deserted the family for a long time and has not contributed toward

the care of the children.

The child under the Adoption Act has the benefit of the inheritance clauses, and it is gratifying to know that our adopting parents look upon the adopted child as their own in this respect most particularly. In many cases that is the reason for taking out an order. Scores of foster parents have had a child in their home for years, and rather than let any one know that the child is not their own, would continue without legal adoption were it not that they wished to be absolutely sure there would be no difficulty about the child inheriting their property. Any abuses under the inheritance clause of the Adoption Act are as yet only possibilities and from our limited experience we very much doubt that they would ever become realities. It should be remembered that under the Act the child inherits from his adopting parents, but from none of the kindred of the adopting parents.

Closely allied with the matter of inheritance is the question of the birth certificate. Keen disappointment and sometimes heartbreak exists when the adopting parent learns that even after legal adoption an official birth certificate cannot be issued without reference to the original name. There is a difference of opinion as to whether or not the child should be told he or she is adopted. Probably half the adopting parents in the province never want the child to know of the adoption. One of these wrote that between their son by birth and their daughter by adoption they felt no difference in their love and thought it a great pity any distinction should be made when the birth certificate is issued. We have suggested that provision be made for the issuing of a form corroborating the registration and omitting the original name, which could be used in school, sports, etc. After the age of twenty-one it would perhaps be wise for the child to know of the adoption and also in the event of marriage.

All the children who have been legally adopted when over twenty-one years of age, with but two exceptions, have resided with their foster parents for a

number of years, the majority from childhood.

The Immigration Department now demand the adoption by relatives in Ontario of young people being brought into this country without a guardian, and the United States authorities require the legal adoption of children being taken from Ontario to the States.

Our sister provinces of Saskatchewan, Nova Scotia, Manitoba and Quebec have patterned their adoption laws after the Ontario Act, and in 1926 an Adoption Act was passed in England.

CHILDREN OF UNMARRIED PARENTS ACT

INVESTIGATIONS

During the fiscal year ending 31st October, 1926, 1,705 cases were reported to the provincial officer. This increase of 358 over 1925 is probably due to the wider knowledge of the provisions of this Act and the greater co-operation of social agencies and the legal profession. Schedule "A" shows the disposition of these cases.

Our local officers have been exceptionally busy during the year with their investigations and court work. Many miles are travelled in making these investigations, often in inclement weather. In addition they have considerable office work to do, such as interviewing, reporting their cases to the provincial officer, answering correspondence, filing etc., as well as aiding in the collection end of the work.

Excellent service continues to be rendered by the maternity homes to which the mother is referred for pre-natal and post-natal care. One or more of these is located in each county and district town, and serves the surrounding community.

In addition to the general supervision, the provincial officer investigated 711 Toronto cases this year, or an increase of 196 over 1925. Here we work harmoniously with social organizations, maternity homes, the legal and medical professions, while the morality department and newspapers at once refer cases to this office. In addition, many young people in trouble are brought in personally by their friends and relatives.

SETTLEMENTS

Our main task under the Act is to establish paternity, secure settlement, agreements or court orders and make collection thereunder. Outside of Toron, the persons concerned are approached by our local officers, and in Toronto by two inspectors attached to the Provincial Officer's staff. A number seek to evade their obligation by leaving Ontario and frequently go to Quebec, or the western provinces. The majority, however, drift to the States, particularly the border cities of Detroit and Buffalo, where expert social workers soon locate them on clues given by the Provincial Officer, report their attitude towards settlement and often serve them with court papers. The social organizations of other cities in the States also give us valuable assistance when called upon. During the year we had a man located through a social agency in England, and served. He appeared with his lawyer at the Juvenile Court in Toronto, and a \$500 cash settlement was made. This was considered satisfactory, as he was a plasterer by trade without other means than his earnings.

AGREEMENTS

Two hundred and thirty-nine agreements with the Provincial Officer were entered into during the fiscal year. In these the alleged father admits paternity and either makes a lump sum settlement or agrees to pay expenses and weekly maintenance for a sixteen-year term. Cash settlements run from \$200 or \$300 to \$1,500, having regard to corroborative evidence and the man's ability to pay. Weekly maintenance rates are from \$2 to \$6.

During the same period nineteen private agreements were filed with the Provincial Officer. Such agreements are made between the parties and approved

by the judge. These settlements totalled \$4,355. The Provincial Officer do not collect this money nor take any responsibility as to the nature of the agreement. There are no doubt many others entered into of which we have no knowledge.

In twenty-five cases, small cash settlements were made without agreement of any kind. These settlements are sometimes effected privately, and frequently as a result of interviews by our local officers and inspectors. During the year they totalled \$5,790.50. In such cases corroboration is generally too weak for court action, and the best settlement obtainable is accepted.

In eighty-four cases reported private settlements were made between the parties, but we were unable to secure any information as to the amount paid.

COURT ORDERS

An affiliation order is applied for where the young woman has sufficient corroboration and the accused denies paternity and refuses to settle, as well as where there is an agreement with the Provincial Officer in default. One hundred and twenty-seven such orders were made during 1926. Outside of Toronto, our cases are heard before the District or County Court Judges. In most instances the Crown Attorneys act for the Provincial Officer, although a few of our local officers perform this work themselves. In Toronto, the Juvenile Court Judge hears nearly all our cases, the Assistant Crown Attorney representing the Provincial Officer. Here eighty-nine cases were heard resulting in fifty-one orders. Affiliation orders vary from \$1.50 to \$6 per week.

APPEALS

During the year, eleven applications for appeal were made, two of which were by the mother of the child. These were disposed of as follows: In two cases, leave to appeal was refused. Of the remainder four appeals were abandoned, two were dismissed and three are pending. The Attorney-General's department represents the Provincial Officer in the Appellate Court.

Collections

The Provincial Officer collects all moneys payable under court orders and agreements with himself. The total receipts this year amounted to \$88,353.80, with disbursements of \$79,540.90. Cheques go out monthly to the mother or whoever is caring for the child. This entails an elaborate bookkeeping and follow-up system, the interviews and correspondence being very heavy. A collector is kept busy on Toronto cases, and our local officers aid us materially in locating and interviewing the men living in other parts of the province.

Schedule "A" gives a comparative statement of receipts and disbursements since 1921.

Varied Agreements and Orders

Frequently after collections have been made for some time under an agreement or order, a cash settlement is considered desirable. The agreement is then varied by the Provincial Officer, or in a case of an order, application is made to the Judge for this purpose. The consent of all parties must be secured to such varied documents.

COURT ACTIONS ON DEFAULT

Default in payments under agreements and orders results in further application to the Court for affiliation orders and shew-cause summons respectively. In the latter instances where poverty is pleaded, the weekly maintenance is often reduced, but where contempt of court is shown either by non-appearance on the summons, or flagrant disobedience to the order application is made for the man's committal to gaol. Such actions are very effective in aiding collections.

STATISTICS

Our statistics deal with nationality, religion, occupation and other facts relative to our cases. It is not always possible to get complete date, but Schedule "B" contains interesting information.

CHILD PLACING

Every effort is made to keep mother and child together for the nursing period, and indefinitely, where the circumstances warrant it; 1,085 children were

reported as being with the mother during 1926.

Where unable or unwilling to keep her child, the mother is referred to the Children's Aid Society of the county in which she has domicile, to have it listed for adoption. Frequently, in smaller places the local officers of adjoining counties co-operate in finding foster homes. During the year legal adoption has been granted in 184 cases of children born out of wedlock, and seventy-two children are still in foster homes, in which legal adoption is under consideration.

If the mother desires to keep her child but is self-supporting, and her work is such that she cannot have it with her, our local officers and social agencies find approved boarding homes. One hundred and twenty-seven children have been

so placed during 1926.

Application to have the child committed as a ward of the local Children's Aid Society is made where the mother has no means of providing for it. If mentally and physically fit, an effort is made to find a foster home. One hundred and seventy-nine children have been made wards during the year.

The deaths of fifty-eight children are reported. Medical certificates are

obtained wherever possible, showing cause of death.

REPEATERS

One hundred and eighty-nine mothers came under this heading in 1926. Quite a large percentage of these are feeble-minded and constitute one of our most serious problems. Where they have only been a short time in the country efforts are made to have them deported, or where this is not possible, placed under supervision.

A Well-Defined Policy

As the number of cases increase greater efficiency is evidenced in the work all over the province, and slowly but surely a definite policy of operation is being evolved. The Provincial Officer in conducting Toronto investigations is in touch with the actual field work which is valuable from the standpoint of supervision.

Toronto, 8th February, 1927.

REPORT

OF THE

Board of License Commissioners for Ontario

ON THE OPERATION OF THE

ONTARIO TEMPERANCE ACT

FOR THE YEAR

1926

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY OF ONTARIO

TORONTO
Printed and Published by the Printer to the King's Most Excellent Majesty
1927

.

To His Honour William Donald Ross,

Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOUR:

The undersigned has the honour to present to Your Honour the Report of the Board of License Commissioners for Ontario on the operation of The Ontario Temperance Act for 1926.

Respectfully submitted,

WILLIAM H. PRICE,

Attorney-General.

Attorney-General's Department, March 30th, 1927.

REPORT

of the

BOARD OF LICENSE COMMISSIONERS FOR ONTARIO

on the operation of the

ONTARIO TEMPERANCE ACT

For the License Year 1925-26.

Office of the Board, 71 Grenville Street, Toronto.

TO THE HONOURABLE W. H. PRICE, K.C., M.P.P.,

Attorney-General of the Province of Ontario.

SIR,—The Board of License Commissioners for Ontario has the honour to submit its Eleventh Annual Report covering the operation of The Ontario Temperance Act for the year ending October 31st, 1926.

THE SCHEDULES

Schedule A (1) gives the number of prosecutions by provincial officers. There were 184 convictions of holders of Standard Hotel Licenses, and 45 dismissals, as compared with 96 convictions and 30 dismissals during the previous year. Convictions of non-licensees were 3,673 and dismissals 547, and for the previous year convictions were 3,503 and dismissals 554.

It should be noted that included in the prosecutions are 1,060 convictions and 62 dismissals on the charge of being found in a public place in a state of intoxication, and in the previous year the convictions for this cause were 1,173 and the dismissals 94.

Schedule A (2) gives the returns for the District of Manitoulin, the only District remaining under The Canada Temperance Act.

Schedule B shows, by License Districts, the revenue accruing to the Province from fines under The Ontario Temperance Act, the total being \$333,882.70 as compared with \$365,446.82 for the previous year.

Schedule C shows expenses of enforcing the Act in the Districts, the total being \$187,221.61 as compared with \$193,066.54 for the previous year.

Schedule D shows the total revenue from this Branch for the fiscal year ending October 31st, 1926, to be \$418,699.82 as compared with \$523,362.79 for the previous year.

Schedule E shows revenues from fines accruing to municipalities which have appointed officers under Section 120 of The Ontario Temperance Act. These amount to \$320,961.40 as compared with \$387,405.98 for the previous year.

The two sums, \$320,961.40 received by municipalities and \$333,882.70 received by the Province, show an aggregate sum of \$654,844.10 paid in fines as compared with \$752,852.80, the total for the previous year. In addition to fines paid, liquor to the value of \$41,651.03 was confiscated.

Schedule F shows the distribution of Standard Hotels, licensed under Section 146, by license districts numbering 1,479 as compared with 1,523 for the previous year.

Schedule G shows the names of Ontario Temperance Act Inspectors and their addresses and Districts.

Schedule H shows the number of commitments for drunkenness to County and District gaols during the past 6 years.

Schedule J makes a comparison between the two years 1914 and 1926 in commitments for all offences and commitments for drunkenness, with percentages.

Schedule K shows the names of persons or companies holding Native Wine Permits.

Physicians' Liquor Prescriptions and Other Orders

December	87,939	15,546	103,485
Total	735.502	121.114	856.616

Note—In "Other Orders" are included six-ounce and pint orders filled at dispensaries, duplications, etc., which average probably 200 orders per month.

The prescriptions are those issued by physicians, and the orders include orders of physicians (for office use), druggists, dentists, veterinarians, holders of manufacturers' permits, hospitals, churches, etc.

*The statutory reduction to thirty per month was made effective on July 1st, 1925.

Manufacturers' Permits

Permits issued during the year for the use of alcohol and other liquors for manufacturing purposes under Section 121 of the Act, numbered 348. The commodity most used in manufacturing is alcohol, of which the use of 652,565 gallons of standard alcohol 65 overproof was permitted. The quantity actually used as reported by permit-holders during the year was:

In gallons of standard 65 o.p. (or 165 proof), 301,265. In proof gallons (or 100 proof), 498,089.

All the large users manufacture in bond, the alcohol being taken out of bond and mixed for manufacturing purposes, or denatured, in the presence of an officer of the Department of Customs and Excise of the Dominion of Canada.

SALE OF NON-INTOXICATING LIQUORS

The Ontario Temperance Act of 1925 made provisions for the sale of non-intoxicating liquors which do not contain more than two and one-half per cent. of absolute alcohol and pursuant thereto the following liquor permits were issued:

	Brewer-	Brewers'			Restaur-		Steam-	
Year	ies	Warehouse	Hotel	Shop	ant	Club	ship	Total
1925	28	253	1,535	1,224	673	182	10	3,905
1926	28	132	1,394	955	743	154	6	3,412

APPEALS FOR CLEMENCY

There were 484 appeals for clemency considered during the last calendar vear, and of these 171 received favourable consideration and 313 were refused.

LIST OF STANDARD HOTELS

Three years ago the Board published a list of licensed Standard Hotels. This year a list, accompanied by data as to accommodation furnished, etc., is published separately. In view of the rapid growth of summer tourist business in Ontario, and of enquiries for information, it is felt that an official list of this kind, accessible to motor leagues, boards of trade and other bodies interested in promoting tourist traffic, may prove of value.

Confiscation of Vehicles

The power given to magistrates to confiscate vehicles used in transporting liquor intended for sale has been of great service. The following table gives particulars as to confiscated cars:

1. Number of cars confiscated during 1926	56
2. Number of cars returned to owners without sale	9
3. Number of cars retained for use by our officers	7
4. Number of cars sold	26
5. Amount received for cars sold	\$9,430.82
6. Average price	362.72
7. Number of liens allowed	17
8. Amount of money returned to lien-holders	\$6,720.84

THE NATIVE WINE INDUSTRY

Fifty Native Wine Permits are in operation for the permit year ending October 31st, 1927. These permits are issued to authorize the sale in this Province of wine manufactured from Ontario grown grapes, as provided for in Section 44, Ontario Temperance Act.

In Schedule K will be found lists of holders of native wine permits.

Of the fifty wineries, seven are of annual manufacturing capacity of over 100,000 gallons; the remainder are of varying capacities from 1,000 gallons up.

Wineries are subject to a tax by the Dominion Government of 7½ cents per gallon and by the Ontario Government of 50 cents per gallon.

The following statistics of the native wine industry in Ontario for the year 1926 are based upon individual reports received from wineries, and are believed to be approximately correct. Some of the winery reports were made for the calendar year 1926 and others for the year ended October 31st, 1926, but for the purpose in hand, namely, to convey an idea of the extent of the industry and its relation to grape-growers, the figures here given may suffice:

NATIVE WINE STATISTICS FOR THE YEAR 1926

Gallons of wine made	$521,772\frac{1}{2}$
Gallons of wine exported	$1,474,903\frac{1}{2}$
Gallons of wine in stock at close of year Value of wine sold in Ontario	3,521,959 \$1,023,044,44
Value of wine exported	\$521,423.11
Tons of grapes purchased Tons of grapes used, of own growth	9,998
Tons of grapes used, of own growth	420

THE PUBLIC SERVICE

The members of our Staff continue to discharge their duties with fidelity and efficiency.

The Commissioner of Provincial Police and the Inspectors and other officers throughout the year have assisted and co-operated with the Board most cordially in enforcing the Ontario Temperance Act.

One of the most active of these officers was the late Inspector T. H. Constable of Cochrane, who was murdered on October 15th, 1926. He was a veteran of the Great War and a young man of integrity and promise. It is doubtful if the public at large has any just appreciation of the fine qualities devoted to the public service by many of these men.

The Board gladly pays tribute to General Manager Birmingham and the excellent officers and employees of the Ontario Government dispensaries, who occupy positions which often test their principles. It is recognized by all who have to do with the dispensaries that they are conducted upon lines of scrupulous honesty and efficiency. As a result the Ontario Government dispensaries enjoy an enviable reputation both at home and abroad.

James Hales, Chairman.

GENERAL MANAGER'S REPORT

TORONTO, 31st January, 1927.

James Hales, Esq., K.C.,

Chairman, Board of License Commissioners for Ontario, 71 Grenville Street, Toronto.

DEAR SIR,-

I have the honour to present to the Board my annual report covering the operations of the dispensaries for the fiscal year ending October 31st, 1926.

Public Service

As in the past we endeavoured to make certain that the mail orders were despatched the same day as received, a service we feel the public have appreciated. Mail order shipments by express and stage route showed an increase of 16.43 per cent., total shipments being 219,206 as against 188.262 for the previous twelve months. The monthly and daily averages were 18,267 and 725 respectively. The amount paid in express and stage charges was \$121,922.88, an increase of 11.27 per cent. over last year. In addition we made 611 express shipments to hospitals, universities and government institutions, which by reason of purchasing liquors at reduced rates, have to pay the express or freight charges on same. It is perhaps well to point out that the mail order branch of our business has steadily increased; in fact, the number of shipments has more than doubled since 1921. In the cities where the dispensaries are located, free delivery service by auto truck was continued. We have always met the requests of the hospitals for special deliveries and the same policy has been followed in the matter of special deliveries to private homes in cases of emergency.

EMPLOYEES

Practically no complaints were received as to the service rendered by the employees, a gratifying condition of affairs, when it is remembered that many of the employees come into contact with the public for many hours of each day. In all branches of our work a most efficient service was given. Very few temporary employees were taken on during the vacation period, but the service was not allowed to suffer as extra efforts were put forth by the employees. During the busy season of mid-December many of the employees were compelled to put in long hours in order to assure that the filling of prescriptions and other orders received in the mail should not be delayed.

PRICE OF LIQUORS

On the 8th of February, a very substantial reduction was made in the prices of the majority of the liquors carried by the dispensaries; some Scotch whiskies were lowered in price to the extent of fifty cents a bottle, and the decrease per bottle for Canadian whiskies was, generally speaking, twenty-five cents.

There had been a reduction in the cost to the dispensaries of many of the brands of Scotch whisky, hence the reason for the reduction to the extent of fifty cents. No changes were made in the customs and excise duties. We feel it is well to draw attention to the very large amount of money that we have to pay to the Dominion government in the way of customs, excise and sales tax. During the, fiscal year the dispensaries paid to the Department of Customs and Excise, directly or indirectly through the Canadian distillers, brewers and wine growers the sum of \$2,370,903.59.

Purchases

We adhered strictly to the policy of purchasing liquors from long-established and well-known firms, and purchases were made with a view to turning over the same as quickly as possible. Stocks on hand, valued at cost, at the close of the year amounted to \$640,982.77, as against \$742,396.24 at the same date last year. It is our practice to order fairly heavily in the fall, so that shipments may reach Montreal before the close of navigation on the St. Lawrence river, and this year many of the orders did not reach our central warehouse until the month of November, otherwise the value of stock on hand at the close of the fiscal year would have been considerably higher.

PRESCRIPTIONS AND OTHER ORDERS

During the fiscal year the total number of prescriptions and other orders received at the dispensaries was 836,025, an increase of 5,914 over the preceding year.

FINANCIAL STATEMENT

Sales.—The total sales amounted to \$5,083,340.23 as against \$5,065,997.44 for the previous twelve months. The daily average was \$16,832.25. When the selling prices of the liquors were substantially reduced in February we naturally anticipated a decrease in sales as contrasted with the preceding year, even though a slight increase was shown in the number of prescriptions and other orders filled. It would appear that apart from the increase in the number of prescriptions and other orders filled there were several other reasons for the increase. a very considerable increase in the value of the druggists' orders, particularly the orders for alcohol; likewise the physicians' orders for office use; also the orders from the hospitals. After the reduction in prices the sales of domestic liquors decreased, whereas there was an increase in the sales of imported liquors, and as the selling prices of imported strong liquors are considerably higher than the selling prices of domestic strong liquors sales were accordingly increased. Sales showed 68% imported liquors and 32% domestic by value, and 65%imported and 35% domestic by gallonage, compared with 65% imported and 35% domestic by value and $62\frac{1}{2}\%$ imported and $37\frac{1}{2}\%$ domestic by gallonage during the year ending October 31st, 1925.

Gross Profits.—Once again we reduced our percentage of gross profits due to the reduction in our selling prices. The gross profit made was 24.38%, or including hospital sales, 24.27%. In 1920 the gross profit was 41.06%; in 1921, 36.56%; in 1922, 33.81%; in 1923, 30.61%; in 1924, 27.05%, and in 1925, 25.98%, but the figures for 1920 and 1921 did not include hospital and other sales by Head Office, which would have reduced the percentage slightly.

Payments.—During the course of the year we paid to the Provincial Treasurer the sum of \$1,000,000.00. Since the dispensaries came into operation, we have paid to the Provincial Treasurer a total sum of \$5,250,000.00.

Overhead.—The percentage of operating expenses was 9.60, in which are included the discounts to druggists, amounting to 1.18, and the mail order expense, including prepaid express charges, amounting to 3.07. The corresponding percentages last year were 9.48; 1.19 and 2.80.

Breakage.—Interior and irrecoverable breakage was .015% of the sales, the lowest figure we have reached, as against .02% last year. We have continued to insist on an improvement in the packing of our liquors on the part of overseas shippers, and the policy in question has aided us materially in keeping down our loss by breakage.

VARIOUS DEPARTMENTS

Head Office.—The same high standard of efficiency was maintained as in past years. The accounting branch continued to prepare for the Board the monthly financial statement, reports of the daily sales made by the dispensaries, and a monthly statement of the stock movement. The Board was also supplied with the usual reports of inpection of the various dispensaries and central warehouse, and many special reports, a large number pertaining to confiscated stock. In connection with the work carried on by head office it should be borne in mind, a matter that is referred to in the auditors' report, that the bulk of the sales are made in single bottles and that a record has to be kept of every bottle.

Censor's Department.—This department has continued to furnish to the Board every month, a statement containing the number of prescriptions issued by each physician on the dispensaries and on the drug stores of the province; also the quantities of liquor obtained on requisitions by physicians for office use,

by dentists, druggists, veterinary surgeons, manufacturers and hospitals. Many special reports involving considerable detail work were furnished throughout the year. It is necessary for the department to keep constantly in touch with the various governing bodies of the physicians, dentists, druggists and veterinary surgeons so that the dispensaries shall always be in possession of authentic lists.

Central Warehouse.—All the imported goods and the greater proportion of the domestic liquors are received in this department and distributed to the various dispensaries. All our bottling is done here. In addition, all confiscated stock is sent to this department for examination, storage and subsequent disposal; no small task in itself. The utmost care has to be taken in the weighing in of the cases, in order that all breakage and pilferage may be detected, so that the head office shall be furnished with the data required for instituting claims against the transportation companies. Last year the department handled 189,864 cases containing liquor.

Dispensaries.—The loyal and efficient service of all the store employees has been manifest at all times. Prompt despatch of mail orders and city deliveries was, as usual, carefully observed.

In closing we desire to express our thanks to the Board. From Messrs. Clarkson, Gordon and Dilworth, our auditors, we received many valuable suggestions.

Yours very truly,

ONTARIO GOVERNMENT DISPENSARIES,

A. H. Birmingham,

General Manager.

REPORT OF AUDITORS

TORONTO, 28th December, 1926.

JAMES HALES, ESQ.,

Chairman, Board of License Commissioners of Ontario, 25 Queen's Park, Toronto.

DEAR SIR,—

We have audited the books and accounts of the Dispensaries, Central Office and Central Warehouse for the year ending 31st October, 1926, and have prepared the enclosed balance sheet and schedules relative thereto, which, subject to the following remarks, exhibit a true and correct view of the position of the undertaking on 31st October, 1926, and a correct statement of the earnings for the year.

We report in detail as follows:—

BALANCE SHEET

Assets

Real Estate and Buildings, \$215,025.25.

Of this amount \$34,441.37 represents the cost of the land at the rear of 154 Wellington Street West purchased in 1922 and the garage building erected thereon, and \$205,000.00 the cost price of the land and buildings at 154 Wellington Street West, also purchased in 1922. Depreciation at the rate of five per cent. per annum has been provided on the cost of the garage building and on an estmated value of \$133,500.00 for the building at 154 Wellington Street West, making a total provision for depreciation to 31st October, 1926, of \$24,416.12.

We have not on this occasion examined the title to these properties, but we saw a copy of the title deeds at the time of purchase certified by the Department of Public Works as being a true copy.

Petty cash	\$2,575 00 27,319 67
	\$29,894 67

We verified the cash at Central Office and at Dispensary No. 1 by actual count on 30th October, 1926, and received a certificate from the Branch Manager of each dispensary and a representative from Central Office as to the amounts on hand at the dispensaries.

The bank balances are in agreement with certificates from your bankers after allowing for outstanding cheques.

Accounts receivable, hospitals and other institutions, etc	\$6,697 45
Freight claims and duty recoverable	1,610 41
Accrued Bank interest	1,750 40
Prepaid charges, stamps, etc	1,358 40

We have carefully examined the accounts, which consist principally of balances owing from hospitals and other institutions, and in our opinion these will be collected without appreciable loss. The accrued bank interest has been compared with the monthly reports from your bankers. Sufficient reserve has been provided to cover any loss in collection of freight claims.

Stock of liquors at cost price	\$640,982	77
Stock in transit	187,161	36

Your general manager has certified that an inventory of Central Warehouse stock was taken under his supervision on 30th October, 1926, amounting to \$413,981.65, and was priced at cost excluding unpaid duty on goods still in bond amounting to \$419,909.45.

The inventories at the dispensaries were taken by the managers and one of the Central Office staff and together with the Central Warehouse stock were checked with the stock ledgers kept at the Central Office and found to be in accordance therewith. Your chief stock accountant has certified that he has checked the costing, extensions and additions of all the inventories and has also compared the quantities with the stock ledgers and that they are correct.

Included in the inventories are goods in transit amounting to \$187,161.36, details of which are given in Schedule 6. As these stocks are purchased f.o.b. shipping point and the dispensaries own the goods from the date of shipment, they are included in the inventories at cost of goods plus freight and insurance and a liability set up for the unpaid portion of the purchase price.

Attached hereto, Schedule 5, is a statement showing the value of the stock in hand and of the furniture and fixtures at each dispensary, also the amount of fire and other insurance carried.

The confiscated stock on hand at Toronto, 31st October, 1926, amounting to \$12,232.78, is not included in the assets as the dispensaries only handle the stock and keep the records on behalf of the Board of License Commissioners, purchasing from the Board such stock as they require from time to time.

Samples of liquor, which your general manager estimates are of considerable value, are not included in the assets, but he informs us that proper record is kept of all samples received or used.

Fire, riot and burglary insurance is carried on confiscated liquors in conjunction with liquors, etc., owned by the Ontario Government dispensaries as shown in Schedule 5.

Cases, barrels, etc., on hand	\$116	77
Stationery and supplies	8.103	23

The chief stock accountant certifies that stationery and supplies on hand, priced at cost, amounted to \$8,103.23. A reserve has been provided for the whole amount. He also certifies that there are sufficient empty cases and other containers on hand and returnable to the brewers and distillers at invoice cost to cover the total value of the cases and barrels.

LIABILITIES

Accounts Payable, \$188,679.36.

Your accountant has certified that all known liabilities to 31st October, 1926, were included in the books at that date.

Contingent Liabilities.

The invoice cost plus freight, duty and insurance of goods ordered but not received to 31st October, 1926, amounted to \$130,073.70; the duty payable on stocks in bond amounted to \$419,909.45, and the duty on stocks in transit, to \$334,846.25. Your general manager certified that these amounts were correct.

Leases.

Schedule 7 gives a description of the various premises occupied by your dispensaries under leasehold.

Reserve for Supplies and Contingencies, \$15,284.14.

This includes a reserve for the total amount of the stationery and supplies and sufficient to provide for any losses in the collection of the claims and accounts receivable.

Surplus, \$888,737.21.

This is the balance of profits made since the dispensaries were opened on 24th May, 1919, after paying \$5,250,000 to the Provincial Treasurer and writing off the whole of the machinery, equipment and office furniture, and alterations to the building at 154 Wellington Street West.

Details of the profits earned for the year ending 31st October, 1926, are shown in the attached Schedules 1, 2 and 3. We have to report on the principal items as follows:

Profit and Loss Account—Schedule 1

This schedule shows in detail the operations of the various dispensaries. The liquors are purchased through the Central Warehouse and are charged up to the various dispensaries at cost.

The gross profits resulting from sales at dispensaries amounted to	\$1,225,290 87	24.38°c.
From this must be deducted the following:		
Discount on sales to chemists and druggists. \$59,623 70 1.18%		
Mail order and delivery expenses		
and Central Warehouse expense 268,894 34 5.35°_{\circ}		
	482,647 27	9,60%
Leaving a net profit on operations of dispensaries of	\$742,643 60	14.78%

Your policy is to sell the liquors at the same price throughout the province and to pay the expense of special packing and express charges. We have shown on the same schedule the comparative statements of the total business done by each dispensary.

The percentage of gross profits earned by each dispensary were:

\ *	1 Toronto	21 71		0.01.00
- NO.	1—Toronto	24.71 per	cent, or	saies
"	2—Toronto	24.75	"	"
"	3—Hamilton	23.67		44
"	4—London	23.70	"	"
"	5—Windsor	24.71	**	66
"	6—Kingston	23.80	"	"
"	7—Ottawa	24.49	"	66
"	8—Fort William	25.11	"	"

The reduction in the gross profit percentages is the result of the price reductions which were made during the year.

OPERATING EXPENSES—SCHEDULE 2

This schedule shows details of the various expenses together with the percentages that these expenses bear to the sales. The largest item consists of salaries, etc., \$188,307.13, being approximately 3.75 per cent. of the total sales of \$5,025,798.07. It must, however, be borne in mind that the bulk of the sales are made in single bottles and record has to be kept of every bottle at the Central Office. The amount written off for breakages is \$771.81 or .015 per cent. of the sales. Under the present system of cost records it is the only item of stock which cannot be checked and should be subject to the closest supervision by the management.

When bulk liquor is bottled it is usually found that small overages or shortages occur, due partly to the fact that the quantities invoiced in bulk vary slightly from the actual quantities received and perhaps also to a certain amount of wastage in bottling through dripping and other causes.

We believe, however, that the bottling is carefully done and supervised and that the actual number of bottles reported as having been produced are taken into the stock record but think it well to draw attention to these variations so that you may be familiar with the circumstances.

NET PROFIT AND LOSS ACCOUNT—SCHEDULE 3

This schedule shows the total sales for the year, including sales of alcohol and sales to hospitals, and miscellaneous receipts, and the net profits after charging up the cost of alcohol sold and liquors sold to hospitals and writing off the expenditure on machinery, equipment, furniture and alterations to building. The percentage of net profits to total sales was 14.92 per cent.

Yours faithfully,

CLARKSON, GORDON & DILWORTH.

Ontario Department of Agriculture

REPORT

OF THE

Minister of Agriculture

Province of Ontario

FOR THE YEAR ENDING OCTOBER 31, 1926

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY OF ONTARIO

TORONTO
Printed by the Printer to the King's Most Excellent Majesty

REPORT

OF THE

Minister of Agriculture for Ontario

To His Honour W. D. Ross,

Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOUR:

I have the honour to submit the Annual Report of this Department for the fiscal year ending October 31st, 1926.

Climatically the season has been a somewhat unusual one. In many sections of the Province it was marked by very excessive rainfall. This affected the growing season, but it particularly affected the harvest season. The continuous rains throughout the fall months have few parallels in the records of the Province. This was particularly true in the South Western Counties. Some sections and some crops were more fortunate than others and, on the whole, the returns were just a little bit better than the previous year, as shown by the official figures of agricultural values:

	1925	1926
Field crops	\$250,466,000	\$261,264,000
Farm animals	58,041,000	62,156,000
Wool	1,207,000	1,084,000
Dairy products	100,968,000	93,915,000
Fruits and vegetables	22,365,000	18,347,000
Poultry and eggs	31,648,000	32,233,000
Fur farming	500,000	580,000
Maple products	1,716,000	1,954,000
Tobacco	5,276,000	5,540,000
Flax fibre	750,000	450,000
Clover and grass seed	2,822,000	4,458,000
Honey	1,400,000	500,000
_	\$477,159,000	\$482,481,000

As to legislation, the most important item of the past session was the passing of The Dairy Products Act. This Act includes the provisions formerly contained in The Dairy Standards Act and a number of new provisions as well.

It provides for supervision of the erection of new cheese factories or creameries, for the grading of cream and for the granting of certificates to cheese and buttermakers. In addition, previous important provisions, such as the selling of milk and cream on a basis of its fat content and the safeguarding of tests, are continued. It is proposed to enforce this legislation gradually, but as rapidly as the campaign of education, which is being carried on, would seem to indicate to be desirable. The grading of cream has become an economic necessity, because high quality butter can only be made from high quality raw material. High quality raw material can only be expected if it is paid for according to its quality. These legislative features, therefore, will strengthen the work of the Department in trying to maintain and increase the standard of Ontario's dairy products. Good progress has already been made in this connection.

Under the different heads under which the Department is organized a review of the work of the year will be found. It is gratifying to note the increasing demand being made upon the Department by the farmers of the Province for information in all branches of activity.

All of which is respectfully submitted.

JOHN S. MARTIN,

Minister of Agriculture.

ONTARIO AGRICULTURAL COLLEGE

AGE AND RELIGIOUS DENOMINATIONS

The limits of age in the General Course, 1926, ranged from 18 years to 36 years. The average age was 22.

Religious denominations of students registered for the fall term were:

Anglican	Jewish 1	Roman Catholic 8
Baptist23	Lutheran 1	United Church152
Disciples of Christ 1	Mennonite 1	
Greek Orthodox	Presbyterian43	

ANIMAL HUSBANDRY AND FARM DEPARTMENT

The summer of 1926 was one of the wettest on record and all crops suffered as a consequence. Alfalfa winter killed to some extent and hay was only a fair crop. Spring grains were scarcely up to average and oats rusted badly. Corn was a good crop, though late, and mangels produced abundantly. Turnips yielded only about fifty per cent. of a full crop due to the ravages of aphis and the excessive moisture. A nicotine dust spray was tried on eight acres of turnips and successfully killed the aphis at a cost of \$10.50 per acre for material. All crops were successfully harvested and fall plowing completed.

No horses were purchased during the year. Two Percheron foals were raised. Work on horse maintenance costs was continued.

The beef cattle herd was maintained at a high standard throughout the year and a new sire was purchased at \$675 to head the Shorthorn herd. Herd maintenance cost records were continued.

The dairy herd continues to improve and the average quality of the lot is of a high order. In addition to records on production and rearing costs some valuable work on veal calf costs was carried through. All cattle in both the dairy and beef barns were entered in the Federal accredited herd system and passed a clean test in July.

Never have the sheep produced more or better lambs. Eight breeds were maintained for classroom purposes.

It was a great year for hogs. Prices remained firm and returns from the large herd of hogs broke all previous records. Chief among a number of experiments under way is an investigation into the causes of losses in cold weather litters. A university graduate in biology is working on the problem.

During the year, Bulletin 299, on The Bacon Hog was revised and published as Bulletin 320. Bulletin 274 on sheep was also brought up to date.

The annual sale of surplus stock drew a record crowd and, considering conditions, was a great success, totalling over \$9,000. Hogs and dairy cattle were in keenest demand.

The College Judging Team stood second at the National Dairy Show at Detroit in twenty-seven teams, only a few points behind the winners and at the Royal Agricultural Winter Fair in Toronto, were first, scoring 330 points more than their closest competitor, standing at the top in horses, beef cattle, dairy cattle and swine, with high man in dairy cattle and in swine. Results are not yet in from Chicago.

FIELD CROP EXPERIMENTS

Under the Field Husbandry Department, the experimental work which has developed to an extensive scale, has been maintained, as well as other duties discharged.

The best varieties of nearly all the leading farm crops of Ontario have been originated at the Ontario Agricultural College by means of hybridization and selection. In a new country there is a tendency towards decreasing yields as time advances unless fertility is added to the farms from outside sources. In Ontario, however, it is interesting to know that there has been a gradual increase in acre yields in some of the principal farm crops. Based on reports of the Ontario Department of Agriculture, the following table showing average yields of grain in bushels per acre per annum for the whole Province is both interesting and suggestive:—

Crops	1882-1901	1902-1921	1922-1925
	(20 years)	(20 years)	(4 years)
Oats.		36.5	38.6
Barley		30.2	32.4
Winter Wheat		23.2	26.3

From this as well as from other information it is very evident that the introduction by the College of such varieties as Siberian, Banner, O.A.C. No. 72, O.A.C. No. 3 and O.A.C. No. 144 oats; Mandscheuri and O.A.C. No. 21 barley; Dawson's Golden Chaff and O.A.C. No. 104 winter wheat has had a very decided influence on the increase in acre yields throughout the Province. It is estimated that these increases in acre yields for the three crops here enumerated would amount, when valued at average market prices, to upwards of \$200,000,000 in the last two dozen years.

Some of the other crops on which the College has conducted plant breeding work have also increased while a few including some minor crops such as field carrots in which no plant breeding work has taken place, have actually shown a decrease in acre yields throughout Ontario. From experiments conducted at the College previous to the introduction of the new varietes of high merit it was fully expected that these would have a decided influence in the improvement of both the quality and the quantity of Ontario's field crops. The returns should be even greater as the newer and better varieties become more generally grown on all of the farms.

BIG DEMAND FOR INOCULATION

In the campaign to encourage the growing of alfalfa, carried on during the past spring, special emphasis was laid on the value of inoculation. The result was an exceptionally heavy demand on the Bacteriology Department for bacterial cultures for this purpose. This demand was more than twice as large as any previous year and it incidentally resulted in a revenue which more than offset the entire cost of the Department. The number of cultures sent out was as follows:—

FOF 11	noculating	Alfalfa Seed	10.861
"	"	Alfalfa Seed	1 617
"	"	Red Clover Seed	621
66	"	Alsike Clover Seed	204
"	"	Field Beans "	67
44	"	Field Peas "	410
"	"		190
"	"		
"	"		22
"	"	Sweet reas	46
**	••	White Clover "	15
			14.053
Cultu	res returne	ed by Agricultural Representatives	14,053 497
Cultu	res return€	ed by Agricultural Representatives.	
Lactic E L:	Cultures I scherichia actobacillu	Prepared and Sent Out: acidi lactici as bulgaricus us acidophilus	497

Another matter in which the Department rendered excellent service was in the examination of samples of well water. Altogether 114 samples were sent in and of these over eighty per cent. were condemned as being unfit for drinking purposes. It is evident, therefore, that this service is of great value to the farmers of the Province and should be available in any cases where the water supply is doubtful.

CHEMISTRY DEPARTMENT

Soil work has been carried on during the year quite extensively along several lines.

Three bulletins have been issued: "Soil Acidity and Liming," "Lime and Phosphate," which deals with the results obtained from three farms in each of twenty-four counties, on which phosphates were used on the wheat crop and lime on clover, "Soils and Fertilizers," which treats of the maintenance of soil fertility by the use of green manures and fertilizers.

Demonstration plots have been continued, giving very instructive results in the use of lime and potash. The Canadian Canners and the Dominion Sugar Company are co-operating in the work, with reference to matters in which they are particularly interested, the former as to canning crops and the latter as to sugar beets.

Much work has also been done in regard to the fertilizer requirements of the potato crop and results will be issued on the basis of six years' experiments.

Soil survey work has been continued in South Western Ontario. Special interest in the growing of tobacco is accompanied by a demand for information as to the soils which are suitable for this purpose, especially the soils which are suitable for the growing of flue-cured tobacco. The soil survey work has already been of much value in this connection and will probably be of still greater value when it is completed.

Baking School

Some time ago, the commercial bakers, as represented by their organization, The Bread and Cake Bakers' Association, offered to erect a school for giving instruction in commercial baking, if the Government would undertake its maintenance and operation. This offer was accepted and as a consequence

the building has been in progress of erection during the past year. It is a splendid, compact, well-equipped building and it is being called "The Trent Institute," in recognition of the special efforts of Mr. E. W. Trent, the Secretary of the Association, in carrying through the plan to completion. The work which the Chemistry Department has carried on in the past, of testing flour and otherwise assisting the baking industry, will be continued from this building and in addition, courses of instruction will be given to those taking up commercial baking throughout the Province. It is expected the building will be ready for operation during the coming winter and that a start will then be made on courses of instruction.

POULTRY DEPARTMENT

The year was unusual in that hatches in general were poor, and the crop of chickens rather late. The prices for both poultry and eggs have been well maintained. The dull weather and the general lack of sunshine, throughout the winter and spring, may have had much to do with the early unsatisfactory hatching season.

The hatching and rearing at the poultry department has never been better than it was this year. There may have been several causes, but the following are worthy of attention:—

Milk as a protein source, as compared to beef scrap or tankage, has for a number of years given better hatching eggs.

The addition of two per cent. of cod liver oil to the mash has given better hatches and stronger chicks.

Old hens, or hens from laying competitions, that have made good records, are at times doubtful breeders, but if given from six to eight weeks' rest and abundance of green feed and free range, usually make the very best of breeders.

The demand for instruction in the culling of poultry continues to increase from all parts of the Province. Work was carried on along this line as extensively as facilities would permit. An effort is being made to train persons in each county to do culling so that more people can have their flocks relieved of non-productive hens.

TURKEY FARM ESTABLISHED

For some years past it has been noticeable that turkey raising has been on the decline in this Province. Statistics show that in 1898, there were over 1,000,000 head of turkeys carried in Ontario, while in 1925, the number had been reduced to about 480,000. At the same time the number of other poultry carried has greatly increased.

In view of this fact it was felt that some further attention to the problems of poultry raising should be inaugurated. No doubt the prevalence of blackhead disease has been one of the factors resulting in the decrease of turkeys. Hence one hundred acres of land was purchased in Norfolk County, to be operated as a turkey farm. It will be under the direction and supervision of the poultry department of the College. It is proposed to test methods of prevention of disease, to compare the economy of raising turkeys in confined runs, alternative runs and free range and also artificial rearing, compared to natural rearing. In this way it is hoped to be able to meet the rapidly increasing demand for information on the old subject of turkey raising, which has been made upon the poultry department in recent years.

A start was made during the past summer. The land secured is of a sandy nature, rather low in fertility but with considerable grasshoppers in the district. As a beginning approximately two hundred turkeys were hatched in incubators at the College and then moved to the turkey farm about June 20th, where they were reared around coal burning brooders. They grew very well and only one was lost by disease. Crows, hawks and other pests took a few but the total loss from all causes would not be greater than ten per cent. The turkeys were started on sour milk curds, dried off with middlings, with two per cent. of cod liver oil added to the mixture. There was abundance of tender green feed and gravel was always available as a source of grit. The birds made very satisfactory progress during the season.

AGRICULTURAL ECONOMICS DEPARTMENT

This year marks the completion of the largest volume of research work on a variety of economic problems of Ontario agriculture that this department has yet attempted. The ground thus covered is partially indicated by the following list of publications issued during the year:

(a) The Marketing of Fluid Milk in Ontario.

(b) Marketing Ontario Tobacco.

- (c) Tobacco Farming in South Western Ontario Involving a Survey of 250 Tobacco Farms.
- (d) Cost of Making Creamery Butter in Ontario.

In addition the department inaugurated a comprehensive study of the revisions in farm practices that will inevitably be caused by the ravages of the corn borer in South Western Ontario. This project demands a practical determination of the crops that may profitably be substituted for corn in this area. This problem involves an examination of the following economic phases:

(a) The contraction in corn acreage to meet obligatory clean-up measures.

(b) The marketing possibilities of possible substitute crops; tobacco, sugar beets and canning crops.

(c) The labour resources, actual and potential, for the changed farm methods and practices.

(d) The possible modifications in live stock production and in common farm crops not directly affected by the borer.

A survey of 600 farms to procure essential data on sections (a) and (d) above has been completed and the other sections of the study are so rapidly nearing completion that a report will be issued early in the new year.

BOTANY DEPARTMENT

In addition to the regular academic work and correspondence of the department, the following investigation and extension work was carried on during the past year:

Spray service in the Province of Ontario.

Special investigations into the plant disease problems of the Essex Peninsula. Experiments concerning the effects of various seed disinfectants in the control of cereal smuts.

Experiments in the prevention of rhizoctonia or black scurf of potatoes.

Investigations concerning the strains of canning peas resistant to root rot and experiments for the control of this disease.

Experiments for the control of onion smut.

A Uniform Rust Nursery conducted in co-operation with the Office of Cereal Investigation, United States Department of Agriculture, Washington, D.C.

Co-operative experiments in weed eradication.

Experiments in co-operation with the Department of Entomology to determine whether financial gains are to be secured from spraying commercial vineyards for the control of insects and fungus diseases and to determine the time and number of applications for best results.

Purity tests of clover and grass seed for farmers and seedsmen.

THE PROVINCIAL APIARIST

With a largely increased appropriation, attention was again directed to the work of combating foulbrood among the bees of the Province. A number of sections were chosen on which work was specially concentrated, with a view to cleaning up specified areas. In addition, regular apiary inspection was carried out.

The following is a statement of the areas where the clean-up system was carried on during the past season:

COMPARISON BETWEEN 1925 AND 1926

*Areas where clean-up system was carried out in 1925.

County	Colonies Examined	American Foulbrood	Colonies Treated	Colonies Destroyed
Peterborough. Hastings. Northumberland. Durham. Prince Edward.	1,519 1,502 641	130 173 282 32 0	0 0 11 0	130 173 271 32 0
Totals	5,003	617	11	606

SAME AREAS, 1926

County		American Foulbrood		
Peterborough Hastings	1,235 678	9	0	9
Northumberland	3,061	86	0	86
Durham	169	1	0	1
Prince Edward	25	0	0	0
Totals	5,168	96	0	96

^{*}This report does not include Townships of Hungerford, Elzevir and Madoc in Hastings County or Clarke, Darlington and Cartwright in Durham County, as this territory was not worked in 1925 for lack of time and funds. Complete summary is shown in work completed in 1926 apiary inspection.

Through a misunderstanding treating was allowed for a while in one area in Northumberland County last year. Fifty-eight of the eighty-six diseased colonies were found in this section this year.

Thus far this year \$4,161 has been received from beekeepers for registration of apiaries.

The following is a complete summary of the apiary inspection work for 1926.

SUMMARY OF APIARY INSPECTION, 1926

County	Colonies Examined	American Foulbrood	Colonies Treated	Colonies Destroyed

York	3,759	414	104	205
Totals	40,366	4,134	404	3,184

^{*}These counties are in the clean-up area for American foulbrood or have petitioned the Department to come in during the 1927 inspection season.

Experiments were carried out in the chemical treatment of foulbrood with formalin water. There were in all ten experiments, in which conditions were slightly varied. Practically one-half of these gave negative results, but as excellent results were secured in other cases, the experiments will be carried on another year.

During the year, 1,953 Italian queens were distributed to members. There were eighteen apiary demonstrations held.

The past winter and spring proved very unfavourable and as a consequence it is estimated that probably 50 per cent. of all the colonies in the Province were killed or so weakened that they were useless for honey gathering.

ONTARIO VETERINARY COLLEGE

During the 1925-26 session of instruction there were a total of sixty-six students in attendance. Of these, twenty-one were in the first year class, twenty-one in the second year class, twelve in the third and twelve in the fourth. The latter were graduated with the degree of B.V.Sc., conferred by the University of Toronto at a special convocation.

The session which commenced last fall shows sixty-seven students on the register, so that the attendance seems to continue fairly normal around these figures. The requirements for admission, being now on a basis of matriculation, are being maintained and there is a very noticeable improvement in the type of graduate being sent out from the institution. Probably at no time was a more thorough and scientific course of instruction given than at the present time.

The research and investigation work and the extension work all seem to be on an increase in accordance with the demand of the times. Research work is of value both to the students taking the course at the college and to live stock owners throughout the country in general. The demand for assistance in regard to poultry diseases has been especially great and hundreds of specimens have been sent in to the college. During the year, work has been done on the subjects hereinafter enumerated and details of this work may be found in the report of the college which is available for distribution.

Sterility cases in cattle.
Intersexuality in mammals.
The black fox industry in Ontario.
Pullorum infection in poultry.
Bacteriophage experiments.
Experiments on the disinfection of eggs and incubators.
Veterinary science in Japan.

In its extension service the college naturally works as far as possible in co-operation with the practising veterinarians throughout the Province. Veterinary surgeons and owners of animals are now frequently forwarding specimens to the college for laboratory diagnosis. A detailed laboratory report is sent back as promptly as possible in order to assist in the detection and the control of the disease. In poultry alone approximately 20,000 blood serum examinations have been made during the year. There has been a very considerable demand as well for assistance in controlling fox diseases. This demand is another index both to the growth of the fox industry in the Province and to the extension and application of veterinary science. About 5,000 doses of abortion vaccine have been prepared and distributed to practising veterinarians, in order to comply with the demand of owners to have their cattle vaccinated for infection abortion.

In its Clinical Department the college applies surgery as well as medicine and a very great deal of attention has been paid to this department. Here, also, much time has been devoted to investigation of abortion and sterility in cows. Many valuable animals have been treated for the latter trouble and have been restored to usefulness.

PUBLICATIONS AND STATISTICS BRANCH

The work of compiling agricultural statistics was carried on in co-operation with the Federal authorities. The results are published from time to time as completed.

The distribution of the annual reports has been continued and the following are the figures of the numbers printed for distribution:—

Minister's Report. The Ontario Agricultural College. The Experimental Union. Agricultural Societies and Field Crop Competitions. Horticultural Societies. Vegetable Growers' Association. Ontario Veterinary College. Agricultural Development Branch Stallion Enrolment Board Agricultural Statistics. Fruit Growers' Association Entomological Society. Beekeepers' Association Women's Institute.	3,000 2,500 50,000 14,000 24,000 5,000 4,000 3,000 3,500 27,000 4,000 3,000 4,000 30,000
Total	177,000

Other bulletins printed for distribution were:—	
*218 Birds of Ontario . *252 Preservation of Food: Home Canning . *274 Sheep *301 The Brood Sow . *313 Soil Acidity and Liming . 314 Vegetable Gardening . 315 Plum Culture . 316 The Cherry . 317 Bee Diseases . 318 Currants and Gooseberries . 319 Nursery Stock Identification . 320 The Bacon Hog . 321 Lime and Phosphate . 322 Soils and Fertilizers .	6,000 20,000 12,000 12,000 20,000 40,000 12,000 15,000 15,000 25,000 30,000 45,000
Total	279,000
Circulars were printed for special distribution as follows:— 48 Hardy Alfalfa Circulars without serial number:—	75,000
Corn Borer Act and Regulations. *New edition.	9,000

AGRICULTURAL AND HORTICULTURAL SOCIETIES BRANCH

AGRICULTURAL SOCIETIES

The value of the agricultural societies of Ontario to the Province whether it be the holding of exhibitions, conducting field crop competitions, the maintenance of live stock or any of the other lines which fall under their supervision, is very great from both an educational and financial standpoint. Improvement in live stock and farm products is their aim and has been during the century and a half that has elapsed since exhibitions were first organized in Canada.

Owing to bad weather conditions many fairs in 1926 suffered heavy losses in gate receipts. It required all the appropriation of \$10,000 to partially meet the claims in this connection.

Marked improvement has been shown in the exhibits of live stock, particularly in the cattle and swine classes and larger prizes are being offered for hogs of the bacon type, with a corresponding increase in the number of entries.

The department has prepared and recommended a standard prize list covering all classes shown at Ontario's fairs and exhibitions. This list was unanimously endorsed by the Ontario Association of Fairs and Exhibitions, and copies have been sent to every secretary and it is meeting with the approval of all the societies. It may be modified to suit the conditions of the smaller ones.

Each year we have a greater number of applications for departmental judges from societies. Two hundred and sixty applied for judges in 1926 and 1,190 judges were provided for this work.

The electrotypes of standard breeds which we prepared for use in prize lists have met with the approval of the officers of a number of Agricultural societies. They can be purchased for the small sum of seventy cents a piece. Two hundred and forty-four electros were furnished to societies during the year just closed.

FIELD CROP COMPETITIONS

Continued interest is being taken in the standing field crop competitions, and the rules and regulations have been improved from time to time to meet changing conditions. These competitions were organized in 1907, at which time there were one hundred named varieties of oats distributed in different sections of the Province. Last year the number was reduced to less than a half dozen of proved and tested varieties.

The combined field crop and threshed grain competitions are proving a valuable asset to the farmers of this province, who are discovering the value of seed properly cleaned and graded and of a high standard of vitality, and as the time goes by, appreciate the action of the department in introducing and demonstrating the value of up-to-date seed cleaning plants.

At the Royal Winter Fair and Canadian National Exhibition, the competitors from the field crop competitions had on display the finest grain exhibit ever shown in Canada.

HORTICULTURAL SOCIETIES

Steadily and surely the horticultural societies of Ontario are extending their work of urban and rural beautification from Kenora to Glengarry. There are now 270 branches in the Province with an approximate membership of 70,000. Twenty-eight new societies were organized in 1926 and a large number of applications are already in for 1927. The expenditure of these societies for bulbs, plants, shrubs and flowers, were, for the year just closed, \$150,841.84. The legislative grant is \$20,000. The services of fifteen lecturers were available, who delivered valuable educational lectures in different parts of the Province and a large number of flower shows were held which were attended by interested crowds.

Substantial prizes were offered by the Ontario Horticultural Association for the greatest improvement during the year of cheese factories and their surroundings. This splendid work was inaugurated by one of our enterprizing farm journals, and was heartily supported by the branches of this association in different parts of the Province. In the past these food-producing centres and their surroundings, visited as they are daily during the summer season by hundreds of farmers, were far from being as well kept as they should be. A new era has dawned, and, in many sections the men in charge of these institutions are planting trees and shrubs and vines, and beauty now, instead of ugliness, prevails. Where this good work has been inaugurated, the farmers who visit these improved factories are catching the spirit of the beautification of farm homes.

As a result of what is being done all over the Province many rural horticultural societies have been organized and are doing excellent work.

ONTARIO VEGETABLE GROWERS' ASSOCIATION

Many new branches of this organization have been formed and greater interest than ever has been taken in the work of this association. In the year gone by the surroundings of the homes of vegetable growers have been somewhat neglected, but since garden competitions for the members of this association have been organized, a marked change is shown, since 40 per cent. of the score card is allowed for the care and beautification of home surroundings. The competitions for six different kinds of vegetables in the local branches have proved invaluable. Substantial prizes are offered by the Canadian National Exhibition for competition among the branches and last year these proved to be one of the biggest drawing cards in the Ontario Government Building. It is expected that at least twenty branches will compete in 1927.

ONTARIO PLOWMEN'S ASSOCIATION

Never before in the history of Ontario has there been such an interest taken in better cultivation of the soil, good plowmanship, and better seed beds than in 1926. A large number of new branches were formed in different sections of the Province and among the pioneer settlers of Northern Ontario good work is being accomplished by the branches formed there.

In 1925, at Brockville, 210 plowmen entered this great contest, and in 1926 at Lundy's Lane 243 plowboys "drove their venturous plowshares to the steep." The Niagara Falls demonstration was the largest yet held. On this famous battle ground, one hundred years ago, the embattled farmers of Ontario fought for their freedom under the British flag and victory perched on the banners that flew

over "the thin red line." The scene was changed in October, 1926, when in friendly rivalry Canadians and their brethren across the now settled line contested for the magnificent trophies offered by the Ontario Plowmen's Association and their friends for the best work done by the farmers of an adjoining brotherhood, and in peace as well as in war Canadian plow boys were again victorious. Upwards of seventy-five thousand spectators visited during the four days of this great International Plowing Match and Farm Machinery Demonstration. The work of all the different up-to-date types of farm machinery and appliances used in Canadian farm homes was demonstrated. One feature of this demonstration was the exhibit of farm machines in use 150 years ago, the sickle and flail were shown side by side with the great harvesting and threshing machines of the twentieth century. The slow moving oxen were seen at work in close proximity to the steady step of the Clydesdale and the latest models of tractor power machines. It was indeed an inspiring sight. The tented city that housed the machines extended for three-quarters of a mile. The work of the Ontario Plowmen's Association is a valuable one, and receives the hearty approval of both rural and urban citizens. Over \$4,000 in prizes are offered in the different plowing competitions.

ONTARIO FIELD CROP AND SEED GROWERS' ASSOCIATION

This association has recently been re-organized and has a substantial membership and its members are becoming interested in the production of seed grain. The officers of this organization were the prime movers in suggesting to the department the benefits that would accrue from sending out a seed cleaning train to the different parts of the Province to demonstrate to the farmers the advantages of up-to-date seed cleaning machinery. Many thousand interested farmers visited the train as it passed through Eastern and Northern Ontario in 1926 and approximately 10,000 bushels of grain and clovers were cleaned, and a number of farmers have grouped together and purchased seed cleaning plants after viewing the work done on the seed train. For 1927 a similar train has been equipped and will stop at forty-six stations, starting in Welland County and finishing in the County of Peel on April 9th. The train is composed of a lecture car in which at each stop are delivered lectures. In another car the best varieties of grain and clover are exhibited. A third car contains several of the newest types of cleaning machines which are in continuous operation from 9 a.m. to 5 p.m. Arrangements have been made with the farmers at the different points where the train stops to bring in from seventy-five to one hundred bushels of grain and clover which is thoroughly cleaned and graded, which together with the screenings are taken home by those providing same. It is expected that not less than 10,000 farmers will visit this train at the forty-six stops in the Province. This is considered one of the best lines of agricultural educational work that has been inaugurated in recent years by the Department of Agriculture.

LIVE STOCK BRANCH

The work of the live stock branch during the past year has covered the usual wide field of activities and perhaps had better be given more in detail under the various projects handled.

ONTARIO PROVINCIAL WINTER FAIR

The Winter Fair held in Guelph, November 9th to 12th inclusive, 1925, was quite successful from the standpoint of excellence of exhibits. The entry in heavy horses was lighter than usual, but the exhibits, as a whole, were well up to the average. The most noticeable weakness in the Fair was from the standpoint of attendance, which was disappointing, considering the excellence of the show.

LOCAL POULTRY ASSOCIATIONS

Local poultry associations again received assistance from the department through the supplying of judges, lecturers and grants to associations during the fiscal year.

	59
Number of Poultry Judges supplied	61
Number of Lecturers	17
Total amount of grants paid to local Associations (November 1st, 1925, October 31st,	
1926)	00
Total expenditures in connection with local Poultry Associations, Judges, Lecturers,	
Grants, Confederation, etc. 84,942	0.2

EXTRACTS FROM ORDER-IN-COUNCIL, GOVERNING ORGANIZA-TION OF LOCAL POULTRY ASSOCIATIONS

No local poultry association shall be approved by the Ontario Poultry Confederation or recognized by the Minister of Agriculture until it has a paid-up membership of sixty bona-fide poultry keepers not members of any other poultry association.

Not more than one association shall be recognized in any city with the exception of cities with a population of 200,000 or more, and not more than one poultry association shall be recognized in any electoral district unless such district includes a city under 200,000, when an additional association may be recognized in such city.

STALLION ENROLMENT

During the season of 1926 there were 1,295 stallions enrolled, which is an increase of twenty-six over the season of 1925. The following certificates were granted: 138 A-1; 376 approved form 1; 626 passed form 1 and 155 defective form 2. Out of this number, 110 horses were enrolled as premium stallions for the year 1926 and ninety-five stallion owners received cash premiums on account of the season of 1925.

Premiums to Pure Bred Stallions

Premiums paid to stallions in 1926 on their breeding report for the season of 1925 is given below, which shows that 85,145 has been paid for premium horses in the Province of Ontario for 1926.

Number of In-foal Mares	Number of Stallions Qualifying	Amount of Premium Granted
20 and under 21 to 30. 31 to 40. 41 to 50. 51 to 60. 61 to 70. 71 to 80. 81 to 90. 91 and over	11 18 20 15 16 8 4 1	825 00 each 35 00 " 45 00 " 60 00 " 70 00 " 80 00 " 90 00 " 110 00 "

It is gratifying to note the increased interest in the horse industry during the past year. Reports from stallion owners would indicate that farmers generally throughout the Province are returning to the practice of breeding horses. The larger horse shows are demonstrating clearly the demand existing for special classes and types of horses. Heavy teams have been selling at good prices, while horses suitable for saddle purposes have been commanding great attention. There are plenty of indications that interest in horse breeding should improve during the coming years, and while the enrolment of stallions in the Province has been increasing slowly during the past three years, the type and quality of the horses being used has considerably improved.

CLYDESDALE STALLION "MAINRING"

The Clydesdale stallion "Mainring" owned by this department, after the season of 1925 was wintered at the Ontario Agricultural College where he was used for class-room purposes. He was returned in the spring of 1926 to stand for the second season at Brooklin, Ontario. During the season of 1926 sixty-three mares were bred to "Mainring."

RAM CLUBS

Work in connection with ram clubs organized through the Live Stock Branch has been carried on during the year with very satisfactory results. Dipping, docking and castrating demonstrations have been held and the marketing end has been assisted by the holding of market lamb fairs. These fairs were held at Emo, Franktown, Middleville, Manitowaning and Little Current at which points ram clubs had previously been organized. Prizes were offered for such classes as:

- 1—Pen of ten market lambs.
- 2—Pen of five market lambs.
- 3—Single ewe or wether lamb.
- 4—Breeding pen, to consist of a pure-bred ram and three grade ewe lambs, sired by the ram shown.

All lambs were graded and marked when delivered at the fair. After the judging, the lambs were sold on a graded basis.

		_	-				-		-	
		96	7	7,360				\$998	02	

These lambs were consigned through a local drover at a cost of eighty cents per lamb, he paying all expenses such as freight, feed, commission, etc. The average price to the farmers was approximately one cent per pound less than the above selling prices. Since the highest price paid at Toronto during the week these lambs were marketed was twelve cents, the farmers in the Havelock Ram Club benefited considerably by using better methods in breeding, feeding and care of their sheep.

GREY COUNTY—BOYS' SHEEP CLUB

In the fall of 1920 the Ontario Live Stock Branch purchased one hundred and thirty grade ewes and placed these with twelve boys selected by the Agricultural Representative in Grey County. These ewes were all bred to good pure-bred sires when distributed and pure-bred Shropshire rams were loaned by the department for use in these flocks during the following four years. Briefly, the purpose of forming this club was to demonstrate to the sheep raisers of the county the advantages in the use of pure sires as well as the practice of dipping, docking, castrating and co-operative marketing. At the time these flocks were placed the Agricultural Representative was beginning a campaign in this county for improved practices in sheep husbandry which has since been very successful and the work carried on by the boys in this sheep club was simply a concrete example of the practices in breeding, feeding and care which were being recommended to the sheep raisers of the county.

The boys in return for the ewes given were, by agreement, to return to the department over a period of five years a number of yearling ewes equal to the total ewes in the flock when placed, and further agreed to manage this flock according to instructions from the department. As a result of ewes being returned from the flocks placed in 1920 there have been started on a similar basis:

6 flocks in 1922—(5 flocks of 5 ewes and 1 flock of 9 ewes).

7 " 1923—(5 ewes in each).

8 " 1924—(7 flocks of 5 ewes and 1 flock of 10 ewes).

9 " 1925—(5 ewes in each).

8 " 1926—(7 flocks of 5 ewes and 1 flock of 3 ewes).

The practice being followed is that the Agricultural Representative selects each year boys from among his junior farmers, whose farms are suitable for sheep raising and on whose farms no sheep are being kept. The sheep being placed now are much superior in uniformity and mutton conformation than the original ewes distributed as there are now three and four crosses of pure-bred sires in the present ewes. The department continues supplying each flock so placed with a pure-bred Shropshire ram for four successive years after which, when the return of ewes to the department has been completed, the boy gets title to the flock and supplies his own ram.

BACON HOG CLUBS

At the beginning of the year 1926 there were 246 active Bacon Hog Clubs, distributed in thirty-five counties. During the year this number has increased by ninety-four, the number of active clubs at the close of the year being 340, distributed in thirty-eight counties and districts as follows:

NUMBER OF CLUBS BY COUNTIES

Counties	Number of Clubs	Counties	Number of Clubs
Brant	. 8	Muskoka	. 1
Bruce	. 10	Norfolk	. 5
Carleton	. 1	Northumberland	. 21

Lambton	. 6	Waterloo	. 19
Lanark	. 6	Wellington	. 17
Leeds	. 4	Wentworth	. 11
Middlesex	. 9	York	. 2

To provide for replacements and to fill new applications, 127 animals were bought from fifty-three different breeders at an average cost of \$49.61. Of this number three were of the Berkshire breed, four were Tamworth and the remainder, 120, were Yorkshire.

Animals were delivered to the clubs express or freight paid to the nearest railway station. In some cases the price paid was for the animal, delivered to the club. To take care of exchanges of animals between clubs and to deliver boars to clubs, 123 shipments were made at a total cost of \$777.31 or an average cost per shipment of \$6.23.

In sections where a number of Bacon Hog Clubs have been organized and operating for a year or more, as follow up work the Ontario Department of Agriculture, co-operating with the Dominion Department of Agriculture, assisted in the organization of special bacon hog fairs. Six such special fairs were held at the following points:

Fair	County
Mitchell.	Perth
Stirling	. Hastings
Colborne	Northumberland
Kitchener	· Waterloo
Nelles' Corners	Haldimand
Stayner	Simcoe

In addition to financial assistance to the prize list, the Ontario Department supplied demountable hog pens and hurdles, thus making it possible to hold the fair at or near a loading station on a regular stock shipping day. The market hogs exhibited were sold by sealed tender on the day of the fair and in each case the price realized was considerably in advance of the prevailing market price for the day. Such fairs provide the hog producers in a section with an opportunity to have a competent judge sort out the desirable breeding stock. Where one or more have been held in a section the improvement in both breeding and market hogs has been very remarkable.

CO-OPERATIVE CAR SHIPMENTS OF LIVE STOCK

This is called our co-operative shipments of live stock to Western Canada and Northern Ontario. The table following will give an idea of the services rendered to Ontario breeders shipping to Western Canada for the years 1908 to 1926, inclusive:

NUMBER 13	S = EACH	SHIPMENT

Year	Horses	Cattle	Sheep	Swine	Total
908	22	74	14	15	125
909	25	70	84	4	183

925	1	12	11	0	24
926	2	4.3	33	5	83

ASSISTANCE TO AUCTION SALES OF PURE-BRED LIVE STOCK

During the year November 1st, 1925, to October 31st, 1926, assistance has been given to twenty-three local associations that have held sales. A total of 816 cattle were sold and the total assistance given amounted to \$1,992. The assistance so granted is paid at the rate of \$3 per head for every animal sold, with a maximum grant to any association of \$100. Inspection of the stock offered by members of these clubs has been made, where requested, by an officer of the Live Stock Branch. Such inspection previous to the sale eliminates undesirable animals.

PURCHASE OF COWS FOR NORTHERN ONTARIO

The Department of Agriculture co-operating with the Department of Northern Development, have continued the policy of assistance in purchasing cows by settlers in Northern Ontario under the policy inaugurated during the fiscal year 1924 to 1925. Cows were purchased during the summer of 1926 by settlers of the following places:

Dryden	27 cows
Emo	
Hearst	
Kapuskasing	16 "
T. 4-1	60
Total	Do Cows

	Pure Breds	Grade
Breeding: Ayrshires. Holsteins. Shorthorns.	17 8	21 19 3
Total Average cost: \$93,27 per cow.	25	43

LIVE STOCK EXPOSITION WINNINGS AT CHICAGO, ILL., 1926 BEEF CATTLE

Ontario was represented at Chicago with one herd of Shorthorn cattle owned by T. A. Russell, Downsview. In view of the fact that the Chicago is the greatest beef cattle show in America, the success of the Ontario entries is outstanding evidence that Ontario breeders rank high among the breeders of this continent.

Class	Total Entries	Ontario Prizes	Owner

This shows Ontario with 27 per cent. of the total exhibitors in the fat classes winning 60 per cent. of all the first prizes competed for, with 50 per cent. of all the championships and reserve championships.

ASSISTANCE TO EXHIBITORS AT INTERNATIONAL SHOWS

The Ontario Department of Agriculture, through the Live Stock Branch, by helping in the payment of freight and other expenses, makes it possible for Ontario breeders to exhibit at foreign shows and thereby advertise the quality of Ontario live stock.

THE DOG TAX AND SHEEP PROTECTION ACT

During the past session of the legislature an Act to impose a Tax on Dogs and for the Protection of Sheep was passed. In so far as this Act gives protection to sheep owners from the damages caused by dogs to sheep, it is well to note briefly a few of the more important points bearing on the procedure which must be followed if appeals are to be made from the award of the local valuer.

Every sheep owner, upon discovery of damage to his flock from dogs, should at once notify the local valuer or the clerk of the municipality of such loss. The local valuer, who examines the sheep, is required to make a duplicate report of his award in writing, one copy of which is given to the sheep owner and the other copy to the clerk of the municipality.

If either of the parties, i.e., the sheep owner or the municipal council, is not satisfied with the award of the local valuer, each has equal rights in making an appeal to the Minister of Agriculture for the appointment of an arbitrator whose award shall be final and must be paid. Such appeal must be accompanied by a deposit of \$25 which will be returned if the appeal is sustained and which will be forfeited if the appeal is lost.

Copies of this Act may be obtained by writing the Director of the Live Stock Branch, Ontario Department of Agriculture, Parliament Buildings, Toronto.

During the past year eight appeals have been made under this Act, seven of which have been sustained and one lost. The appeals have come from over a great territory including Rainy River, Sudbury, Prince Edward, Victoria, Simcoe, Wellington, Norfolk and Kent Counties.

INSTITUTES BRANCH

The year 1926 has witnessed expansion and effective work on the part of the Women's Institutes with an increase in the service rendered by the Institutes Branch. Educational features bearing directly upon the feeding, housing and clothing of the family have received due consideration, while many other activities as outlined in the reports of the standing committees have received the support of the Institutes in general, of which there are now 1,047 with a membership of over 35,000.

The following extracts from reports of standing committees will indicate the breadth and importance of their work:

EDUCATION

The educational programme as submitted to the Institutes for 1926 under the headings of, "The School," "School Grounds," "The Pupils," and "The Community" has been followed with splendid results. Certain lines of activities have become fairly general: supplies for schools, first aid kits, drinking fountains, towels, victrolas, book cases, pictures, books: aiding school fairs, planting shrubs, etc. During the past year, assistance has been given by many of the Institutes to musical training in the schools, one school having employed a teacher in music at \$250 per year. In another Institute \$50 was spent on a manual training cutfit for the use of the teacher who was qualified to give instruction. Groups of Institutes assisted in organizing classes in manual training and providing work benches, while the local School Board gave assistance and the Department of Education paid 75 per cent. of the salary of special instructor who spent his whole time among the five centres organized.

Some have bought moving picture machines and provided the community with films of an educational character, thus raising funds to carry on the general work of the Institute. Prizes are being given to girls for darning stockings and the making of dolls' dresses, and to the boys for building bird houses. Play equipment has been furnished in some centres.

The travelling libraries are being utilized to a greater extent from year to year. Not only are the Institutes looking well to the physical well-being of the children, but are taking a keen interest in educational matters in general, and are discussing with keen interest the possible benefits through organizing township schools boards.

The services offered through the Extension Department of the Universities are being utilized to a greater extent from year to year and debates and public speaking and amateur plays are resulting in increased attendance.

The Institutes' regular meetings from month to month are a forceful educational factor in making towards greater efficiency in home making in its broadest sense.

Home Economics

The work of this committee embodies the very ideals for which the Institutes were originally organized, greater efficiency in the feeding, clothing and sheltering of the family; and the Institutes find this field of more interest to-day than ever before. While the consideration of the needs of all ages is occupying the attention of the members, special emphasis is being given to the feeding of the pre-school age child, and an increasing number of Institutes are introducing the hot school lunch in the rural districts. Up-to-date literature on food values and nutrition

is being generally circulated among the members. Addresses in relation to health as well as its influence upon the character and the study of textiles receive due consideration.

Proper location of the houses, suitable plans for the farm home, re-modelling of old houses, efficiency in the kitchen, adequate and healthful heating and water systems are among the topics of general discussion.

HEALTH AND CHILD WELFARE

The interest in Health and Child Welfare has been universal and the reports for 1926 are most encouraging. A splendid spirit of co-operation has been established among the local medical officers of health, school nurses and organizations working along health lines. The literature available through the Provincial and Dominion Departments of Health is being utilized to good advantage through all sections of the Province. The Institutes are more and more recognizing the value of preventive and constructive efforts. Many of the Institutes are devoting more and more time to child welfare, and in many centres are co-operating with Rotary Clubs and hospitals in providing treatment for handicapped children. At least one meeting a year is devoted to health in many Institutes.

AGRICULTURE

A great majority of the members of the Institutes live on farms and are therefore keenly interested in agricultural matters in general. The officers are informed from time to time as to literature available, both through the Provincial and Dominion Departments of Agriculture, samples being furnished them. The members examine the sample copies and apply direct for those of particular interest.

The committee reports a growing interest and an ever increasing success in poultry raising, on the part of the girls and women. The culling of poultry and the grading of eggs has been of particular interest. Many are now catering to the enormous tourist trade; and where the service and accommodation is of a high standard, much success is experienced. Small fruit farming has been taken up by an increasing number of girls and women. The Institutes are taking a keen interest in school fairs and gardens and the beautification of public grounds, as well as the planting of trees and shrubs and the growing of flowers on the homestead. General cleaning up days and the care of neglected spots in towns and villages are being supported by the Institutes and they are active in many districts in extending the organization and activities of the horticultural societies.

IMMIGRATION

The Institutes are doing their part in welcoming newcomers from overseas and settlers from other districts and are absorbing them in community life and activities. The Institutes are following the advice of the committee by securing information as to new families and girls employed in homes throughout the Province from the Women's Branch, Department of Immigration, Ottawa; Colonization Department of the Ontario Government; The Employment Bureau, Toronto; Land Settlement Branch, 32 Adelaide Street East, Toronto. The newcomers find life in the rural districts much more enjoyable because of the existence of the Women's Institute.

RELIEF

This is one of the most important features in some districts. The Institutes are now accepting responsibility in many sections of surveying the territory covered and giving donations of food, clothing, bedding, etc., contributing to various local relief organizations supporting very generously the Children's Shelter, Sick Children's Hospital, local hospitals, personal visits and showers of fruit, candy and Christmas boxes to inmates of House of Refuge. In fact the Institutes may be considered the recognized medium through which relief work is carried on in many sections of rural Ontario. A number of centres in Northern Ontario have received assistance from Institutes in old Ontario. The policy has been to link each branch in the north asking for assistance with one or two branches in old Ontario, and from year to year supplies are provided.

COMMUNITY ACTIVITIES

The programme in community activities is very broad and the Institutes stand ready to co-operate in all matters which affect the community as a whole. Libraries, rest rooms, community halls are built and equipped and made community centres. Community Christmas trees, choral classes, debating societies all come in for consideration. Town improvements such as drinking fountains, bathing facilities, sidewalks, street lights are among the activities. Interchange of visits among branches, picnics in the summer and social evenings in the winter when the whole community is invited gives much needed recreation.

LEGISLATION

Many of the Institutes have secured literature bearing upon the laws of the land and are making a study of methods of Dominion, Provincial and Municipal Governments. The members are looking carefully into laws and methods of administration affecting women and children. The guardianship of children, wills, the economic position of married women, are among the topics of special consideration. The marriage laws of Ontario as compared with other provinces and other countries are receiving due attention.

Historical Research

This committee was formed in the fall of 1925, but has already undertaken work of real interest and national value. In some counties they have already begun to compile the history of the whole county and in many Institutes a beginning has been made on local history, including individual farms, industries, public buildings, etc. A record is being made of the first settlers, their methods of living and their accomplishments, the history of the first schools and the first church in the district is being recorded. The committee suggests that a little more time be given to the study of local history, and thus gain a greater insight into the lives and thoughts of our ancestors in this country. They are proceeding on the belief that every community has a history which should be preserved.

With branches in all sections of the Province, the work of this committee should be very interesting and result in a compilation of information which has not yet been collected in a systematic manner.

CANADIAN INDUSTRIES

This committee was also formed in the fall of 1925, and in the report presented in 1926, inquiries whether or not the members of the Institute ask for Canadian products when buying. They also asked pertinent questions as to why they buy the important articles. The members are requested to furnish a list of goods produced in Ontario or Canada that do not compare favourably in price and quality with similar foreign made articles. The visitors to the conventions were asked to pledge themselves to ask for Canadian, Ontario or British Empire products in their daily buying. The committee makes the following appeal: "Coming as most of us do from farm homes, let us with renewed faith, hope and love, do our part, small though it may seem, in adding to the ever increasing store of Canadian wealth, Canadian patriotism and international concord and good will.

Demonstration Lecture Courses

The major portion of the service rendered by the Institutes Branch is through Demonstration Lecture Courses in "Home Nursing and First Aid," "Food Values and Cookery," "Sewing" and "Millinery."

For the "Home Nursing" and "First Aid Courses" graduate nurses with

For the "Home Nursing" and "First Aid Courses" graduate nurses with experience and familiar with rural conditions and needs are employed. This course is for the purpose of enabling women in the rural districts to obtain a knowledge of how to care for the sick in the home, what to do in emergency and how to do it: how to render the best possible assistance to the doctor or the nurse; the equipment and care of the sick room; how to take temperatures, pulse and respiration and keep records; how to prevent contagious diseases; disinfecting, fumigation, etc.

In the "Food Values and Cookery" course, instruction is given and lesson leaflets furnished covering the following subjects: Vegetables, Fruits, Eggs, Milk, Cereals and Cheese, Meat, Meat substitutes, Flour mixtures, Desserts, Salads.

In the "Sewing" course, instruction is given in the class of sewing ordinarily done in the home; how to use the sewing machine; and each member of the class is expected to make one dress.

The "Millinery" course consists of practical work; each member of the class

being required to make a hat, and many of them make hat shapes.

Systematic instruction along the lines indicated is very much appreciated by the women and girls of rural Ontario, who not only derive information of real value and acquire efficiency in performance through taking these courses, but are encouraged to extend their reading and take full advantage of the literature available from various sources.

During 1926 two weeks' courses were held as follows:

Sewing	122	Total taking instruction 2,924
Millinery	67	1,161
Food values and cookery	40	1,595
Home nursing and first aid	43	1,485
Total	272	7,165

In addition to the above, three months' courses were held at six points, with an average enrolment of sixty-six (66) at each place. In these courses each person received instruction in "Sewing," "Millinery," "Household Science" and "Home Nursing and First Aid."

GIRLS' GARMENT MAKING CLUBS

There are now sixty active Garment Making Clubs in operation with a membership of over one thousand girls. Some of the groups are now completing the second year work, as prescribed in the manual furnished to the local leaders and the girls who undertake the course. This line of work has proven very effective, the younger girls acquiring information and efficiency of real worth at very little cost to the Department. Women who have done a good deal of their own sewing, and some who have had special training along that line, undertake to instruct the girls one afternoon a week, with the result that at the end of the prescribed course exhibits of work done are very creditable to both teachers and pupils. The Institutes Branch furnishes examiners and certificates are issued to those who measure up to the required standard. The course prescribed is of a thoroughly practical standard, and it is hoped that local leaders will be able to give instruction and leadership in other activities among the girls, thus placing them in a position to take full advantage of the more advanced instruction offered through the regular demonstration lecture courses.

GIRLS' JUDGING COMPETITION

Nutrition—School lunch and menu for family in country for a day in September.

Baking—Bread and plain cake.

Good Dressing—Wardrobe suitable for girl in the country.

Sewing—House dress and making buttonhole and plain hem.

Twenty-one counties took advantage of the services of instructors in judging "Nutrition," "Good Dressing," "Baking" and "Sewing". With the assistance of the agricultural representative and in many cases, the local Women's Institute, groups of girls were given instruction in judging. This was followed by a county-wide competition, when county teams were selected to compete with the inter-county competition held at the Canadian National Exhibition. There were twenty-one of these teams, and in addition, 166 girls entered the open competition; altogether 229.

A great many girls who took advantage of the coaching in the various local centres did not enter the county competitions, but, nevertheless, received valuable instruction. This work is creating in the minds of the girls definite standards in dress, and in the choosing and preparation of food.

In the inter-county competition, the team from Haldimand County won the trophy awarded by the Canadian National Exhibition. The members of the team were:

Members of Team:	Betty Elder, Cayuga Elga Lint, R.R. No. 3, Cayuga	743 742
	Frances Fearman, R.R. No. 3, Cavuga	675

The contestants standing highest in the various classes in the team competition were:

Baking Mary Dunton, R.R. No. 6, Brampton	189
NutritionGladys Packham, R.R. No. 1, Caistor Centre	197
Sewing Kate Frizzell, Bognor	196
Good Dressing Elga Lint, R.R. No. 3, Cayuga	194

The girl receiving the highest aggregate mark in the team competition was:

In the open competition, the high girls in the various classes were:

Baking Eva Graham, Simcoe	177
Nutrition Margaret Watson, Woodbridge	194
SewingAlice Frizzell, Bognor	185
Good Dressing Lessie Brown R R No. 2 Thorndale	188

JUNIOR INSTITUTES

There are now seventy Junior Institutes in the Province, a number having been organized during the year. The membership is made up of girls from sixteen to twenty-six years of age. While the Juniors are organized on the same basis as the Women's Institutes, they stress features that are of special interest to the girls. The Junior Institutes and Junior Farmers' Associations are co-operating in many counties, in social and educational efforts. Debates, dramatics, public speaking, musical competitions, sports and community work in general are receiving attention. The Junior Institutes are generally co-operating with the local Women's Institutes. The Juniors are contributing to hospitals, children's shelters and other worthy causes and have sent supplies of clothing to many centres in Northern Ontario.

GIRLS' CONFERENCES

In order that the girls who are carrying on so effectively in the Junior Institutes, and others interested in problems of special concern to the country girls, might have an opportunity of associating together, exchanging views as how best to carry on, and securing up-to-date information in the lighter forms of agriculture, and particularly the service available through the Agricultural College and the Department of Agriculture, a conference was held at MacDonald Institute, Ontario Agricultural College, Guelph, on May 5th, 6th and 7th. 1926, with 240 girls in attendance. The staff and students of MacDonald Institute arranged the programme, and the Institutes Branch co-operated in completing plans and advertising the conference.

The programme included inspection of the various departments of the college and instruction in poultry raising and bee keeping. One day was devoted to health matters and another to citizenship with community singing, physical

education, amateur plays and entertainment interspersed.

A comparatively small number of girls from east of Toronto took advantage of the conference at Guelph; so a similar conference was held at Kemptville Agricultural College in October. The staff of the school co-operated with the Institutes Branch in planning and carrying out the programme. There were eighty-seven girls at this conference. These conferences did much to stimulate a keener interest and create more definite objectives on the part of the Junior Institutes.

SUMMER SERIES OF MEETINGS

In accordance with the custom which has been followed for over twenty years now, each Institute was given an opportunity to have a lecturer from this Department attend a special meeting some time during the latter part of May or June. Over seven hundred branches took advantage of this service: in many districts two or three nearby branches joining and holding a union meeting. While the chief object of this series is to assist the officers and members in formulating plans which promise to make the work of the branch more successful the speakers were prepared to give definite instruction along lines of

practical value to the members. The subjects dealt with by the lecturers include various features of the food problem; health, largely from the preventive and constructive standpoint; agriculture for women; patriotic topics; up-to-date methods in planning and carrying on the work of the household; co-operation; home crafts; neighbourliness in its broadest sense; home beautification; assistance to the schools; how to assist the boys and girls to find their right life work; community activities; patriotism; gardening; and many other features of general interest.

DISTRICT ANNUAL MEETINGS

These gatherings, with official representatives from the branches throughout the district, are devoted chiefly to the presentation of reports, election of officers, and the formulating of plans for district activities throughout the year. The members of the Provincial Board attend so far as possible the district meetings in their respective subdivisions, and the Institutes Branch furnishes special speakers for a limited number of the annual gatherings. Representative women from all the branches, meeting in conference at the annual gathering, do much to stimulate a keener interest in the work and make plans for extending the work to new centres and giving assistance to those branches which feel the need of some encouragement and help from the district officers and the leaders in the stronger branches.

Annual Conventions

The ever broadening field of activities and the growing importance of the work of the Institutes, resulted in conventions being held in nine centres during the fall of 1926 as follows:

New Liskeard (Temiskaming)	October 6th, 7th.
Port Arthur and Fort William (Kenora, Rainy River and Thund	ler
Bay)	October 12th, 13th.
Huntsville (Parry Sound and Muskoka)	. October 12th, 13th.
Silver Water (Manitoulin)	October 15th.
Soo (Algoma and St. Joseph Island)	
Belleville (Hastings, Northumberland and Prince Edward)	. October 26th, 27th.
Ottawa, Eastern Ontario	
London, Western Ontario	
Toronto, Central Ontario	. November 16th, 17th, 18th,

Convention committees representative of the area covered by each of the conventions co-operated with the Institutes Branch in planning programmes, making local arrangements for halls, billeting, etc., and in carrying out the programme. These annual gatherings are an important factor in stimulating a more general interest in the work and formulating plans for further activities.

The conventions in the fall of 1926 devoted a good deal of the time to outlining not only the work which was done, but details as to how to organize and carry on effectively. A representative from the Institutes Branch assisted at all the conventions. It was the unanimous opinion that the 1926 conventions were the most successful yet held.

The subdivision embracing Hastings, Northumberland and Prince Edward, held its first convention at Belleville. Chairmen of the following standing committees were appointed to report at the convention: Education, Health, Agriculture, Home Economics, Community Activities and Relief; and the following lines were dealt with in the general reports: Historical Research, Immigration, Legislation, Publicity, Canadian Industries.

A very interesting feature of this convention was exhibits of articles made by Girls' Garment-Making Clubs; hats made by the wearer within the past year; a collection of baking—two loaves of bread, six or more buns, twelve cookies, twelve tarts, twelve doughnuts; (each branch in the district was allowed to exhibit only one collection of baking); house dresses made by those who had taken a sewing course in a Women's Institute class; first-aid kits which had been in use since the first of April, 1926; school lunches (one exhibit allowed from each branch); Institute programmes.

The businesslike manner in which the convention was organized and carried on reflects great credit on the capabilities of the women in the sub-division concerned.

While special mention is made of the Belleville Convention, largely because of the splendid exhibits they had in connection with their convention, we are pleased to state that the convention committees in all other areas co-operated effectively in making plans and carrying them through for their respective areas.

EDUCATIONAL PROGRAMME AT CANADIAN NATIONAL EXHIBITION

Ontario co-operated with the other provinces in making exhibits and presenting educational programmes at the Canadian National Exhibition under the auspices of the Federated Women's Institutes of Canada. The programme for Ontario included a Pageant representative of the pioneers and their customs; demonstration of carpentry by boys who had taken a special course in manual training organized under the auspices of the Women's Institutes. These boys made a swing, a teeter, and a sand box as playground equipment; competition by members of the Junior Women's Institutes in cookery, when the contestants were required to prepare and serve afternoon refreshments for twenty people. There was a competition also in posters, representative of the activities of the Women's Institute. Demonstrations in sewing, when instruction was given in such simple things as set-in sleeves, patch work, bound button-holes, etc. Prizes were given for the best child's dress suitable for wearing to school. addition to this a number of addresses were given of special interest to women. Mrs. H. M. Aitken, of Beeton, general superintendent of the Dominion-wide exhibits, gave demonstrations covering a variety of cookery of special interest to rural women.

The effectiveness of the Women's Institute work in general is due in no small measure to the hearty co-operation of the Department and the Institutes in making the common property of all, up-to-date information as to what the Institutes in general are doing. It is possible through the Institutes to arrange, with very little effort on the part of the Department, for meetings to be addressed by lecturers sent out by the Department, and instructors to conduct demonstration-lecture courses in which systematic instruction is given for a period of two weeks or more in the one centre. One of the much appreciated services of the Department is to bring to the attention of the Institutes, literature bearing upon problems in which the women are specially interested, and to furnish the officers with sample copies of publications which are for free distribution, the individual members writing to the Department or organization concerned for additional copies.

FRUIT BRANCH

In certain sections of the Province during the past year, work with the apple growers was carried out with some difficulty. The severe frost of October, 1925, destroyed a heavy percentage of the Spy and other late picking varieties, and caused a state of uncertainty in all our markets as to keeping conditions of our fruit, so much so that prices were unusually low. As the Spy crop was very large and of good quality the loss was heavy, particularly in the Georgian Bay and Lake Ontario sections, where picking was not so far advanced. Growers in these sections were so discouraged that the Spray Service of the Department was not received with the same enthusiasm as in past years.

In other sections, however, including Prince Edward, Huron and Norfolk, good work was done, and in addition, the Counties of Lambton, Middlesex, Brant and Halton were included in the area under supervision. Despite a most unfavourable season, with constant showers from the middle of July on until the end of October, the sprayed orchards were clean and the fruit of very fair colour. Where Bordeaux was used for the first two sprays considerable russeting of the fruit resulted in Western Ontario, lowering the grades to domestic in many cases.

The work in Prince Edward County has been particularly successful and the growers are very appreciative of the services as the following extracts from letters will show:

"Looking over my records of different years' fruit crops, I find that in 1923 I had the same number of barrels as this year, viz., 273. The gradings were as follows:

	1923	1926
No. 1	118	176
2	61	59
3	94	18
Domestic		20

I am sure I had many fewer culls this year than in 1923.

"I attribute the evident improvement in our apple crop to the Spraying Service, to helpful hints on trimming and better orchard practice as taught by the Department's representatives and which we have endeavoured to follow."

"I felt you would be interested to have some idea of the results of the spray service as it had affected me this year. And since packing, I am able to report at least 95 per cent. of our apples entirely free from scab and fungus, so that our culling consisted almost entirely of under-size apples.

"This, I am sure, is most pleasing to me and I felt you would appreciate knowing just to what extent results had been obtained. I sincerely trust that the Department will see fit to give us the benefit of your advice again for another season."

The tender fruit belt throughout the Niagara Peninsula had its trials this year also, with the very peculiar season. The western section had a heavy plum and grape crop but was very short on peaches. Anxiety was general as to the probability of the grapes ripening before severe frosts came, but fortunately the entire crop, estimated at 36,000,000 lbs., was harvested. Of this quantity, it is figured that 20,000,000 lbs. were used by the wineries.

Prices on plums were low and part of the crop was not harvested. Too many varieties, some of them of poor quality, have been planted, while of the

good varieties, our Canadian markets are now apparently overloaded.

As a result of reports made to the Department by representative fruit growers sent by the Government to Great Britain last year, it was decided to try out some experimental shipments to London, Glasgow and Liverpool of our Ontario plums. With the coming into bearing of increased quantities of Damsons, Reine Claudes, Grand Dukes and other good varieties, prices on our local markets have declined seriously and unless some other outlet could be found, heavy losses were inevitable. Guarantees were given on four cars shipped from Grimsby and Burlington to London, Liverpool and Glasgow, and in addition, several cars were shipped from these points on the shipper's own account.

Glasgow proved very disappointing as a market for this fruit despite assurances received from the trade there that it was the best point. London gave by far the best returns, though Liverpool looks like a good market also. It is possible that a direct trade with Glasgow could be profitably arranged for disposing of Damsons, as the big jam manufacturers are located in the north, but this trade would be for large quantities laid down there in bulk at as low

a figure as possible, probably not to exceed \$100 per ton.

As to the results obtained from the shipments, we are quite safe in saying that this market looks very promising for our later plums. Prices are usually very low until the beginning of October, and the returns would not justify putting the expense into packages, freight, etc., that is required. The initial outlay is so heavy that it will deter the ordinary grower from attempting shipments, and the business will remain in the hands of associations or companies who are prepared to risk the heavy expense of labour, paper, packages, precooling, prepaid freight, etc. As it is a carload business and great care has to be exercised in grading and wrapping the fruit, central packing houses are necessary, and only those so equipped should attempt the exporting of this fruit.

In addition, direct representation in the markets there seems essential. The presence in Liverpool of an agent of the Ontario Fruit Growers' Association undoubtedly saved the shippers from considerable losses on the later shipments. Two cars reached the British markets in advance of his arrival, and it was on these that losses were incurred, due in part to misleading information obtained from receiving houses in Great Britain. The later cars,

personally looked after, gave much better returns.

The export situation covering all fruits has been so unsatisfactory that this Department called a conference of shippers during the summer, at which the special Fruit Trade Commissioner of the Federal Government advocated the placing in Great Britain of a man to represent the growers and shippers. His duties were not so much to make direct sales of the fruit as to work with the trade there so that every shipment would reach the best market and be sold to the greatest advantage. As a result of this conference, the Ontario Fruit Growers' Association sent over a special representative who was well acquainted with conditions in Great Britain and to whom shippers were invited to consign cars of fruit intended for these markets.

The very light crop of apples and pears, and the low prices ruling in the export markets, prevented any great quantities being handled in this way the past season. Sufficient, however, was received to gain very valuable information and to establish connections for future business. Mention has

already been made of the valuable services of this agent in handling the plum shipments.

With the changing conditions in Ontario apple orcharding, and increasing competition from all parts of the continent, every effort will be required on the part of both growers and the Department to hold and extend our markets. The brightest spot in the outlook is the coming into bearing of the orchards set out from ten to twenty years ago, at a time when experience had proven the value of many new and old varieties.

The orchardists in the Georgian Bay section fortunately continued the planting of Northern Spy as their leading variety, and many thousands of trees are now bearing their first crops. In the Norfolk section, Spy was also planted freely, but equally with Baldwin and Fameuse, with Scarlet Pippin, McIntosh and Greening also favoured. Fameuse and McIntosh were generally favoured for dessert kinds and increasing quantities will be available not only from the districts already mentioned but also from the St. Lawrence and Ottawa Valleys where these two varieties succeed exceptionally well.

Unfortunately during the period of heavy planting, that section of the Province, east of Toronto to Belleville, was interested largely in the British and continental markets, which then required large quantities of hard winter apples, such as the Ben Davis, Cranberry, Gano, Stark, Pewaukee and Baxter. With improved methods of packing and transportation and increasing competition from sections of the continent producing better varieties, the demand and consequent prices for the above kinds has fallen so low that in most years costs of picking, packing and marketing cannot be obtained. Those growers that have orchards largely of Ben Davis have a difficult situation to face, and unless the fruit can be used economically for some other purpose than the fresh fruit trade, there will be no other plan than the destruction of the trees with replanting of better varieties.

HORTICULTURAL EXPERIMENT STATION

With the exception of the peach crop, fruit crops throughout the Niagara District were fair to good in 1926. In the station orchards the practical failure of peaches interfered to a very considerable extent with the plant breeding and experimental work with that fruit.

The comparatively light peach crop in the Niagara District was due mainly to killing of the fruit buds by low temperatures during the latter part of December, 1925. Following this cold spell the station undertook a comprehensive survey of the peach belt to determine the extent of the injury. This survey indicated most severe injury in the western end of the district around Winona and Grimsby, with gradually lessening injury eastward until, in the "River" area, around Queenston, Niagara-on-the-Lake, etc., there was no appreciable damage. The amount of injury at any given point was roughly in proportion to the severity of temperature ten degrees Fahrenheit being the approximate temperature around Queenston with gradually lower temperatures westward, reaching fifteen degrees Fahrenheit at Vineland and sixteen degrees to eighteen degrees Fahrenheit in the extreme western peach area.

At the time of the above survey, the probable total peach crop, including the favoured "River" area, was placed at about forty per cent. of normal. This estimate was borne out by the crop actually harvested, though intervening estimates by various individuals usually placed the probable crop at considerably above the forty per cent.

The part-time appointment of a plant pathologist to the Station staff has made possible the planning of new lines of breeding and experimental work. Particularly will it simplify the breeding projects having disease resistance as the main objective. It is planned also to undertake, in co-operation with the Dominion Entomological Laboratory at Vineland, a study of the physiological effects of various spray materials on the rest period in fruit trees. All of the above is in addition to regular plant pathology studies already under way or being planned.

The following bulletins were revised and reprinted during 1926: No. 315, Plum Culture in Ontario; No. 316, The Cherry in Ontario; No. 318, Currants and Gooseberries. Bulletin No. 319, Nursery Stock Identification, was prepared and published. In addition to the above, revisions have been completed of Bulletins No. 194, Apple Orcharding, and No. 294, Grafting Fruit Trees. In No. 315, Plum Culture in Ontario, considerable Station experimental results in pollination and fruit thinning were included in addition to the usual cultural directions. No. 319, Nursery Stock Identification, represents original work in its entirety.

PLANT BREEDING

Distribution of Plant Material—The 1926 spring and fall distributions of Viking raspberry canes practically completed the distribution of this variety in so far as this Station is concerned, as stock is now available from several growers and nurseries. The total distribution to date has been as follows:—

																	dozen
1922																1	"
1923																	
1924																	
1925																. 4	10,000
1926																4	000,01

Allowing for a considerable mortality in the above, but including natural increase by growers and nurserymen from the earlier distributions, it is conservatively estimated that there are about fifty acres of Viking planted. These plantings are mostly in the Niagara District. The only limit to planting in the past three years has been the supply of plants. With prospects for a good supply of these there will undoubtedly be increasingly heavy plantings.

Canning tests of Viking made by the Culverhouse Canning Co. of Vineland, indicated the variety to be good in this respect. The canned fruit is whole, firm, of good quality and good colour, though lacking the deep colour of Cuthbert. In weight of solids per can it is equal to Cuthbert or better.

The Vanguard strawberry and the Vedette and Valiant peaches are being handled commercially by a number of nurseries so that no accurate estimate of distribution or acreage can be made. Nurserymen report a heavy demand for stock of Vedette and Valiant, being mostly sold out on these varieties for 1927 delivery before the close of 1926.

Strawberry Breeding—The earlier strawberry breeding work has produced several seedlings worthy of further trial, chief among them being the variety named Vanguard. In 1925, a considerable amount of new work was undertaken, the main purposes of this new work being the production of new varieties possessing some of the quality of the old country varieties while retaining the hardiness

and climatic adaptability generally of our present commercial varieties; also, new varieties of high canning qualities such as Portia, but perfect in bloom. The following table summarizes this work. The number of plants noted has been set in the field where they will fruit in 1927:—

1925 STRAWBERRY BREEDING WORK

Parents	No. of Plants

	104

Raspberry Breeding—Including the breeding work of 1923, the main objective of the raspberry breeding has been to secure new varieties resistant, in part at least, to the disease known as *mosaic*. Breeding seems to offer the only permanent and satisfactory solution of this very serious problem.

Fortunately there are already several varieties of raspberries, which, although falling somewhat short as commercial varieties, yet apparently possess considerable or total resistance to mosaic. Among these may be named Erskine Park, St. Regis and Adams No. 87. In 1923, the following crosses were made, the first named variety being the seed parent in each cross:—

Cross	No. Plants Secured
Cuthbert x Erskine Park	7.6
Erskine Park x Cuthbert	234
Cuthbert x St. Regis.	321
St. Regis x Cuthbert	324
Viking x Erskine Park	98
Erskine Park x Viking	285
Viking x St. Regis	1.029
Cuthbert x Erskine Park Erskine Park x Cuthbert Cuthbert x St. Regis. St. Regis x Cuthbert Viking x Erskine Park Erskine Park x Viking Viking x St. Regis. St. Regis x Viking	321
Total	

Approximately three-fourths of these plants fruited in 1926. Some sixty selections were made as being worthy of further test. These will have to be propagated in a limited way and then their resistance to mosaic determined. It is worth while noting in this connection, that Viking is being used in Michigan quite extensively in mosaic studies. Results there would indicate at least some measure of resistance to mosaic, greater than that of either parent variety. Cuthbert and Marlboro.

In 1925, further raspberry crosses having disease resistance in mind, were made as follows:—

Cross	No. Plants Resulting
Viking x Adams No. 87	130
Viking x Adams No. 101. Adams No. 87 x Viking.	500
Adams No. 34 x Viking	1,600
Adams No. 101 x Viking	·

About fifty per cent. of these have been set in the field. The remainder will be planted out in the spring of 1927. They should fruit freely in 1928 and 1929.

Peach Breeding—Owing to the practical failure of the peach crop in the Station orchards, no new breeding work was undertaken in 1926. However, the cold wave of December, 1925, which caused the injury to the buds, performed at least one useful purpose from a plant breeding standpoint. It indicated quite clearly the relative bud and wood hardiness of various varieties and Station seedlings. As a result certain selections, lacking hardiness, were discarded. Certain other selections, as compared with present commercial varieties, showed satisfactory hardiness. Vedette and Valiant both carried through a higher percentage of live buds than comparable trees of Elberta. The same was true of Seedling No. 1940208, an Elberta type peach maturing about a week in advance of Elberta, and considered very promising.

Apple Breeding—Breeding work with apples is necessarily slow, as compared with small fruits or with peaches. Nevertheless seedling trees from projects started in 1917 are now commencing to bear. In 1926, there was scattered fruiting. Including projects of later years, there are now growing in permanent fruiting blocks some 3,300 seedlings representing the progeny of fifty standard varieties, and a further 180 trees which are seedlings of eight distinct apple species.

Other Fruits—In pears, plums, cherries and grapes a considerable amount of new work has been undertaken. This is in addition to carrying on older work which consists largely of discarding inferior seedlings and selecting and propagating for further tests those which appear to have merit. A number of promising selections have been made in pears, sweet cherries and grapes, but, with the exception of the Victor Cherry, they will be kept under observation for some time yet before naming or introducing any of them.

Vegetable Breeding—The tomato selections mentioned in the 1925 Report gave good early yields in 1926, especially the Bonny Best Prosperity cross. This strain is being re-selected in order to secure one as true as possible to the characters desired.

Some additional selections from the Grand Rapids x Earliana and the Bonny Best (818) x Earliana hybrids are considered very well adapted to forcing or for early outdoor staking. The fruit of these selections is medium in size, round, smooth and uniform, early, and the plants are productive.

EXPERIMENTAL WORK

Orchard Cultural Methods—In 1921 an orchard consisting of four and one-half acres of apples and one and one-half acres of pears was planted with the object of giving further study to the sod-mulch methods of orchard culture. It is recognized, of course, that under most conditions sod neglect seriously reduces tree growth and yield. The experiment as planned provides for sod culture, with all that the name implies. Various plots have been seeded to alfalfa, red clover and grass, others have been kept clean with the intention of seeding down when the trees are well established. Still others will be kept clean continuously. All plots are to receive barnyard manure and commercial fertilizers as their need is indicated by the growth of the trees. Cut material is not removed but is mulched around the trees.

The experiment has now been under way for five years. Annual growth measurements have been taken. While no significant differences are apparent, this in itself is significant, since it means that the sod-mulch plots are doing very well in comparison with the clean culture plots. On an average the clean cultivated trees have made approximately twenty per cent. more growth than the sod trees. On the other hand, the sod trees have made excellent growth, the foliage is of good colour, and they have been the first to start bearing.

Nursery Stock Identification—The leaf and other plant character identification studies were sufficiently completed in 1926 to permit of the publication of Bulletin 319, Nursery Stock Identification. This bulletin deals with pears, plums, peaches and cherries.

The field work made possible by these studies is summarized for 1926 in the following two tables. Table 1 gives the numbers of saleable fruit trees (2-year apples, pears, plums and cherries, and 1-year peaches) inspected in 1926. One-year cherries, also inspected, are not included in the count.

Nursery	Apples	Pears	Plums	Cherries	Peaches	Total
1	10,000 2,500 2,000 2,000 12,000 23,000 25,000 	500 2,000 800 5,000 1,000 4,000 	3,000 2,500 7,800 100 5,000	3,000 1,200 500 1,800 1,300 3,000 5,600 35,000 4,000	15,000 2,700 1,800 2,000 60,000 13,000 300 3,000	28,500 8,750 4,100 2,000 21,800 29,600 39,800 2,000 155,600 316,000 37,000 3,000
14	6,700 373,400	66,200	1,900	55,500	97,800	659,350

TABLE 1-SUMMARY OF NURSERY INSPECTION, 1926

Table 2 summarizes the mixtures found in the various nurseries. With the exception of cherries, the percentage of mixture is very low indeed. In cherries the high percentage is due to the fact that Black Eagle and Yellow Spanish have been confused with, and propagated for, Black Tartarian and Napoleon respectively. These errors constitute seventy per cent. of the cherry mixtures.

Table 2-Numbers of Mixtures Found in Ontario Nurseries in 1926

Nursery	Apples	Pears	Plums	Cherries	Peaches	Total
No. 1	30 1,055 0 10 588 589 72 1,532 931 347 	11 0 3 66 0 34 0	0 17 0 0 7 0 94 	425 640 700 40 155 235 2,940 10 736	55 166 0 58 326 50	510 1,872 700 10 648 810 307 58 1,899 3,871 60 1,177 0

Root Stock Investigation—The work of the East Malling Research Station in England, with fruit stocks, has directed the attention of horticulturists everywhere to the importance of clonal root stocks, which will give trees of practically identical vigour and growth habits. Much of the variability of fruit trees as now grown is due to differences in root stocks, these being seedlings rather than clones. Accordingly a considerable quantity of the East Malling stocks was secured in 1926, and a further quantity will be secured in 1927. This line of work offers tremendous possibilities both for the fruit grower and the nurseryman. Further studies, using native root stocks, will be undertaken, funds permitting.

Vegetable Experiments—In tomatoes comparative test plots of twenty different commercial Earliana strains and other early varieties were made in 1926, the object being to see if any strains possessed the outstanding merit claimed for them. Yields per plant were taken up to August 20th, which includes the period of highest prices. Considerable variation was noticed as to yield as well as type and vigour of plants. The outstanding varieties were Red River, which produced the most early fruits, two strains of Canadian, and an Earliana from Michigan State College. The Red River is a cross of Earliana and Sunrise, and originated in North Dakota by A. F. Yeager. It is a medium sized red fruit, smooth and fairly uniform. The Canadian originated at the Horticultural Department of the Ontario Agricultural College. It is also a hybrid but shows some variation. Of five different sources of Canadian seed two lots were near enough to be classed as the same variety. The Earliana from Michigan is an improved type being fairly uniform, early and smooth.

In addition to the continuation of breeding and selection with other vegetables as reported in 1925, a cultural test on the best methods of establishing a patch of onions was carried out. Three methods were used as follows: First, the use of transplanted seedlings; second, the use of sets; and third, the use of seed sown in the open ground. The sets started into growth earlier and produced larger bulbs which ripened off much earlier than either of the other plots. The yield was much better also. The transplants did quite well and for one variety did better than the sets. However, the sets on the average gave the best returns. The seed plot was quite late in getting started and also suffered considerably from maggot injury.

Onions.—Yields for the three methods:			
Sets	.bushels	per acre	623
Transplanted	. "	- "	465
Seed 1		44	169

While the first two methods may be limited as to the area which can be handled at planting time yet there is a wide margin of yield over the open seeding suggesting the advisability of planting at least part of the acreage by one or other of the first two methods.

A fertilizer plot test on late celery indicated that nitrogen in available form was of first importance and potash second, while phosphorus did not produce any appreciable increase in growth or yield on Station soil. The nitrogen-potash plot was outstanding during the whole season. This applies only to one particular soil but is at least an indication for other soil types as well.

EXTENSION

During 1926, 607 visits to individual growers were made by the Extension Specialist. In addition, a large number of unrecorded visits were made by other members of the staff. Nor was any record kept of visits of growers to the Station. These, however, were numerous as in other years, as were also telephone calls for cultural information.

Throughout the Niagara District and elsewhere in the Province also considerable interest is evident in top-working undesirable varieties and unproductive trees. Many grafting demonstrations were held. These included one in Whitby, four in Norfolk, one in London and sixteen in the Niagara District. These latter were mostly with sweet cherries, and were so planned as to give individual instruction to relatively small groups of growers.

Many requests for addresses on various horticultural topics were filled. In addition, Fruit Growers' Meetings in Hamilton, Cobourg, Meaford, Simcoe, Goderich and St. Catharines were attended by various members of the staff and addresses given. Lectures on fruit and vegetable growing were given at each of the following Short Courses: Orono (Durham Co.), Flesherton (Grey), Acton (Halton), Melbourne (Middlesex), Sunderland (Ontario), Dresden (Kent).

Fruits and vegetables were judged at the following school and fall fairs: Grantham, Burlington, Welland, Smithville, Abingdon, Milton, Beamsville, Vineland, St. Catharines. Fruit was judged at the C.N.E., Toronto, and the Western Fair, London.

Extension experiments in budding and grafting the plum and sweet cherry were carried on in twelve different orchards in the Niagara District.

DAIRY BRANCH

The year 1926 may be considered as only a fairly satisfactory one for the dairymen of the Province.

The prices for cheese and butter were not as high as in 1925. The average price for cheese being about 17 cents, against $20\frac{1}{2}$ cents in 1925; and for butter about $33\frac{1}{2}$ cents in 1926, against 37 cents in 1925.

The instructor's reports show a considerable increase in the quantity of cheese made in 1926, as compared with the same periods in 1925. The quantity of creamery butter made can only be estimated as it was not possible to get reports from all the creameries in 1926.

Ten cheese factories were burned down and fourteen new ones erected in 1926. Thirteen new creameries commenced operation during the year.

Instruction and inspection work was carried on by a staff of thirty-five cheese instructors, nine creamery instructors, four milk and cream check tests, and three chief instructors. The grading of butter was again carried on at the Government Grading Station, Toronto, on similar lines to 1925; the chief instructor for creameries and two assistants doing the work.

PLANTS IN OPERATION IN 1925 AND 1926

It will no doubt become more difficult to increase the percentage of first and special grade cheese year by year, yet there is no good reason why we should not have at least ninety-five per cent. first grade. Better trained makers and a pure milk supply is all that is needed. We are looking forward to a decided improvement in both respects from the granting of graded certificates to makers in 1927.

The production of creamery butter is estimated to be about the same as in 1925—59,000,000 pounds.

The following figures regarding the quality of the creamery butter are taken from the Federal Grader's Report:

Creamery Butter	First	Second	Third
Ontario, pasteurized, 1926	$81.7\frac{C_0}{69.7\frac{C_0}{70}}$	$17.5\% \\ 25.2\%$	$\frac{0.8\%}{5.1\%}$

CREAM GRADING

Regulations governing the grading of cream and paying for it on a graded basis were brought into force on May 1st, 1926. The creamerymen were practically unanimously in favour of the legislation and supported the movement very well indeed.

The standards for cream, and the differences in price are as follows:

Special Grade.

This grade shall include any lot of cream which is clean in flavour, of uniform consistency and suitable for making butter of this grade. Its acidity shall not be more than thirty-one-hundredths (.30%) of one per cent. at the time of being graded at the creamery where it is to be made into butter, and the fat content shall not be less than twenty-eight per cent.

First Grade.

This grade shall include any lot of cream which is reasonably clean in flavour, of uniform consistency and suitable for making butter of this grade. Its acidity shall not be more than sixty-one-hundredths (.60%) of one per cent. at the time of being graded at the creamery where it is to be made into butter.

Second Grade.

This grade shall include cream that does not meet the requirements specified for first grade cream; such as cream that is bitter, stale, musty, metallic or otherwise unclean in flavour, or has an acidity of over sixty-one-hundredths (.60%) of one per cent.

Off Grade.

This grade shall include any cream with a strong objectionable odour or flavour, such as gasoline, leeks, stable, or such other flavours that may render cream unfit for making second grade butter.

Spread in Price.

A premium of (1) one cent per pound butter fat shall be paid for special grade cream over first grade cream, and a premium of (3) three cents per pound butter-fat shall be paid for first grade cream over second grade cream.

The grading was supervised as closely as possible by a staff of nine instructors, each instructor being in charge of from twenty-five to thirty creameries. The grading was done by employees of the creameries. The results of the work for the first season are quite satisfactory as shown by the Federal Grader's Report given above, and also by a comparison of the cream graded personally by the instructors in 1925 before cream grading was adopted, and in 1926, after the regulations were in force. The following information is taken from the Instructors' Reports.

Cream graded by the instructors during the six weeks beginning July 15th:

	Special and First Grade Cream
Six weeks in 1925	. 57.2% . 72.6% Increase15.4%
Lowest average for one week, 1925	. 51.5% . 68.7% Increase17.2%

Cream graded by the instructors at the creameries from May to October, inclusive, 1926:

May	Special	and First	Grade	 66.8%
June	- "	"	"	 76.3%
July	"	"	"	 73.8%
August	"	"	"	 78.8%
September	"	"	"	 80.6%
October	**	**	••	 84.0%

These figures show a steady increase in the quantity of special and first grade cream received at the creameries, which indicates that the cream producers appreciate having their cream paid for on a quality basis, or in other words, work well done is being recognized and paid for accordingly.

BUTTER GRADING STATION

One hundred and thirty-eight creameries sent samples from 23,237 churnings to the Provincial Government Grading Station at Toronto, an increase of nearly thirty per cent. over 1925. These samples graded as follows: 1.7 per cent. special grade; 71.72 per cent. first grade; 26 per cent. second grade; and .58 per cent. off grade—an increase of 12.55 per cent. first and special grade over 1925. The value of grading samples from every churning is being recognized more fully each year; and especially since the grading of cream came into effect.

The improvements made in the sanitary conditions in and around the cheese factories and creameries is very gratifying—true, there is very great room for further improvement, especially at the cheese factories, but the beauty spots which have been made by making lawns, and planting flowers and shrubs around so many of the factories cannot help but have a splendid effect upon those who have not yet got into the spirit of making Ontario dairying not only profitable but an attractive and pleasant feature of the Province's agricultural life.

COW TESTING

The Provincial Department took over the cow testing work in the Province from the Federal Department on February 1st. The organization work is under the supervision of the Director of Agricultural Representatives, the testing of the samples under the Dairy Branch, and the improvement of the herds under the Director of Live Stock. A charge of fifty cents per cow per season is collected by the Dairy Branch, when special samples are tested, a charge of twenty-five cents per test is made. Blank forms for recording the weights, and tests of the milk, bottle labels and preservative tablets are provided by the above branches. A special testing station is established in the Municipal Abattoir, Toronto. All other testing is done at the offices of the District Representatives or at cheese factories and creameries. Two men are employed exclusively in testing samples in the Toronto, Hamilton and Simcoe districts. The balance of the testing is done by the regular staff of creamery and cheese factory inspectors.

The testing of composite samples at cheese factories is also done by the regular staff of instructors, a charge of fifty cents per patron being made. The revenue for the fiscal year 1925-26, from cow testing and composite sample testing at the factories was \$13,992.89.

EASTERN DAIRY SCHOOL, KINGSTON

The attendance at the School, January 1st to March 31st, was as follows:

Regular Long Course	43
Special Cheesemaker's Course	30
Instructor's Course	
	166

Thirty-two wrote on the final examination of which twenty-eight were successful. During the balance of the year the School is operated as a combined creamery and cheese factory. The following figures are taken from the Superintendent's report for the fiscal year November 1st, 1925, to October 31st, 1926:

Butter manufactured	153,224	lbs.
Cheese manufactured	98,259	66
Average per cent. fat in the milk		
Pounds milk per pound cheese	10.96	
Pounds cheese per pound fat	2.72	

CO-OPERATION AND MARKETS BRANCH

A grand total of 276 co-operative oganizations have been incorporated in the Province under The Ontario Companies Act, and most of these have to do with one phase or another of agriculture, practically the only exceptions being the few retail or distributive co-operative stores in some of the towns and cities. The following is an incomplete list of the objects stated by these Agricultural Co-operatives in applying for incorporation:

Marketing Apples, Manufacture and Sale of Butter, Marketing Fluid Milk, Cheese Factory, Marketing Cheese, Marketing Early Vegetables, Marketing Potatoes, Marketing Seed Potatoes, Potato Warehouse, Sale of Pure Bred Animals, Live Stock Shipping, Marketing Live Stock, Weigh Scales, Beef Rings, Threshing Ring, Cold Storage, Egg Marketing, Chicken Hatchery and Day-old Chicks, Marketing Seed,
Marketing Seed Corn,
Elevator,
Seed Cleaning Plant,
Feed Business,
Marketing Grain,
Onion Marketing,
Apple Packing House,
Milling Business,
Processing and Marketing Tobacco,
Marketing Beans,
Marketing Honey,
Marketing Celery,
Marketing Alfalfa Seed,
Marketing Turnips,
Marketing Turkeys,
General Marketing of a Number of
Agricultural Products and Handling
of Farmers' Supplies.

It is impossible to state the proportion of the total number of incorporations which are in active operation at the present time. Attempts have been made to obtain this and additional information in co-operation with the Statistical Branch at Ottawa but responses have not been sufficient upon which to base definite figures. There are a sufficient number of well-known organizations, however, to state that co-operative marketing is making steady and sound progress in the Province, and that this system of marketing farm products has proven itself as a permanent and feasible method of meeting changing marketing conditions as they arise. A considerable number of these co-operative firms have been in existence for ten years and longer and have met successfully the extremely difficult readjustment period of the last few years.

Of the large number of successful organizations, it is difficult to choose outstanding examples as illustrating what has been accomplished, but for the purpose of illustration, three different types might be cited.

(1) Canadian Wide Organization.

The commodity illustrating this type is wool. The Canadian Co-operative Wool Growers. Limited, covers Canada from the Atlantic to the Pacific and markets about one-third of the total Canadian clip. Sheep men to the number of 4,300 in the Province of Ontario use this agency in the marketing of their wool, totalling last year about 740,000 pounds. It is not too much to say that since this company was organized in 1917, the system of marketing Canadian wool has been entirely revolutionized, and perhaps the largest factor in bringing about the improvement in methods is the system of grading established by the co-operative and the payment to the producer on the basis of these grades. Concrete evidences of the benefits of grading may be cited as follows: (a) The increased use of Canadian wools by Canadian mills (perhaps 100 per cent. increase).

(b) Previous to four years ago no Canadian wool sold in England. Now the co-operative has its own direct connections in the export markets and last year sold a half million pounds in England.

(c) A new and profitable market has been opened up for Ontario coarse wools (Leicester, Cotswold, Lincoln) in the United States for the manufacture

of a product known as paper felts.

The markets for wool generally are in a depressed condition, and it is easily conceivable that if the old methods of marketing wool obtained under the present conditions, wool producers would indeed be in an unenviable position. Through their own marketing agency, however, producers are kept fully informed as to changing market conditions, and are able to place their product on the world's markets on a sound merchandising basis.

(2) Province Wide Organization.

The commodity which best illustrates this type is honey. Here again The Ontario Honey Producers Co-operative, Limited, initiated its work by establishing grades. One further step was taken, however, in giving a brand name to its highest grade, and the popularizing of the use of honey by extensive advertising of this brand. That this organization is truly representative of the honey industry in the Province is evidenced by the fact that its 1,000 or more members comprise nearly all the large producers and most of the small producers, and it is estimated, handles between 80 and 85 per cent. of the commercial crop of the Province.

The conditions surrounding the marketing of Ontario honey has entirely changed during the last few years. Through this organizations the beekeeper

is informed as follows:

(1) Honey production in Canada has about quadrupled in the last six years.

(2) The Ontario Co-operative has double the quantity to handle over the previous year.

(3) The western Canadian markets are practically gone, and already

Manitoba, instead of importing, has honey for sale.

(4) Export markets must be found for one-half the light honey, and

practically all the dark honey.

Under the old system of merchandizing it was difficult enough to maintain markets at remunerative prices. In fact, when this co-operative was organized in 1923 there was 1,500,000 pounds unsold in the producers' hands from the previous crop. The task here, was the finding of new markets to take the place of the quickly disappearing western market, due to the great increase of honey production in the three western provinces. This was a task obviously incapable of solution by the individual beekeeper and equally difficult for the honey dealer with a narrow margin and uncertainty of grades and prices. Through group action, however, the producers spent last year some \$20,000 in advertising in our local markets and doubled the consumption in these con-The export market was also developed, and besides the usual suming centres. merchandising methods, an interest was acquired in a bottling plant near London. Standard grades, standard packages, uniform prices, are making Ontario honey known not only in England, but in Holland, Germany and other European markets. It is impossible to even outline the accomplishments of this type of co-operative in grappling with the many problems confronting the producers on a province-wide basis and under such radical changes taking place both in supply and demand, but it well illustrates the place which a co-operative should fill in marketing a commodity on a basis of quality for its members.

(3) Local Organizations.

When we come to the third type, that covering a small area, there are, of course, a large number from which to choose. The recent organization of the Turkey Growers on Manitoulin Island, however, is a convenient illustration of the beneficial results even over a limited area, where there are conditions of marketing which might be improved upon. Turkey growing on the Island has been, more or less, important for some years. A suitable climate, abundance of free range, and other conditions provide opportunity for a large production of The market, however, must of necessity be a distant market, and practically the whole production must be shipped out of the Island. Previous to the formation of the marketing company, turkeys were sold "by the pound," that is, at the one price per pound irrespective of the size or conformation of the birds. As a result of this system with its lack of incentive toward proper breeding methods, there was a steady decline in the size and quality of turkeys on the Island, mature birds seven pounds or more under standard weights, being entirely too common. As a result of being brought into closer touch with the needs of their market a marked improvement has already taken place. first all-turkey show held in Canada was recently held on the Island, as indicating the interest aroused in the improvement of breeding and market stock. small organization has already shipped two cars for the Thanksgiving trade, and will have two cars for sale at Christmas. Through their organization reliable market outlets have been obtained, and reliable sources of market information obtained. There is a marked improvement in the average size of the birds, better prices have been obtained, and a steady lowering of mortality in the turkey chicks. The organization also is encouraging the production and marketing of breeding stock. Already inquiries are being received, and Manitoulin Island is being looked to as a source of well-bred turkeys. Inspection of male birds has been instituted. These and other developments show that co-operative marketing under the right conditions has a beneficial effect on the production and preparation for market of a commodity where previously the marketing methods were resulting in steady decline of the quality and consequently of the value.

Other Local Organizations.

The above is but one illustration of a recently organized local co-operative showing practical results in a short time. Local fruit marketing associations in the Province are, more or less, adequately serving the districts which they cover. Generally speaking the commercial producing districts in Western Ontario are farily well organized, but the commercial districts in Eastern Ontario are not so well covered with marketing organizations. Endeavours to co-ordinate the marketing of these local associations on a province-wide basis have so far not resulted in any definite action on the part of the producers, perhaps partly for the reason that the local co-operatives are doing good work in their respective territories. That the marketing of Ontario fruit is fairly well organized, however, is indicated by the fact that there are some thirty-six (36) local associations, some individual associations marketing in excess of \$100,000 worth of fruit annually.

Numerous local organizations, both incorporated and unincorporated, are practising co-operative shipping of live stock; many of these individual clubs shipping in excess of \$200,000 worth of live stock each year. Egg marketing

through local organizations known as egg circles is operated at some forty (40) points in the Province. In one instance, at least, a number of these local circles combine to candle, pack and sell eggs and also to operate a mammoth incubator, in order that the members may be supplied with high-yielding, blood-tested During last spring this incubator hatched some 20,000 chickens for members of local egg circles. Some of these local organizations market poultry co-operatively. Just recently some five of these local clubs shipped a car of poultry each, totalling net to the producers over \$10,000 for the five cars. In the dairy field there are a number of eminently successful co-operative creameries, cheese factories and fluid milk marketing companies. One large co-operative acts as a sales agent for a number of local factories, selling considerably in excess of \$3,000,000 worth of cheese annually, as well as providing cold storage facilities for its patrons. Since the operation of the seed cleaning train in Eastern Ontario last year, a number of local seed cleaning plants have been established in that part of the Province. Co-operative alfalfa seed, clover seed and seed potato organizations are also in operation. There are some excellent examples of the improvement in grain crops as a result of the organization of local co-operative elevators. Many other local organizations might be cited, having to do with some phase of marketing turnips, celery, late potatoes, tobacco and other farm products. Many of the local organizations also carry on more than one line of work with regard to marketing and also handle farm supplies, such as feeds, fertilizers, spray materials, packages, etc. A large central co-operative, the United Farmers' Co-operative Company, Limited, supplies numerous services for local co-operatives both in marketing and supply departments. acts as a commission firm on the stock yards, runs the largest creamery in the Province, has seed, grain, eggs and other departments in connection with the wholesale functions of marketing, and has a large wholesale department for all manner of farm supplies.

If statistics were available showing the total of co-operative business in the Province, and the growth of such business during the last few years, impressive and steadily progressive figures would be presented. Unfortunately such figures have not been procurable, but general observation reveals the fact that co-operative marketing is permeating all sections of the Province. Diversified agriculture, marked differences of climatic and soil conditions within the Province, large and important local markets, and other factors differentiate Ontario from the western provinces with regard to the formation of large and spectacular organizations and it would appear as the natural trend here that local co-operatives, generally speaking, should first meet the needs in the varying sections of the Province. As in the case of cheese, live stock and some other commodities, these locals will in time supply the basis for larger organizations.

It will be seen from the above that the work of this department is wide and varied in assisting the numerous co-operatives in their organization. Detail assistance and advice is given as to incorporating under The Ontario Companies Act, to suggesting by-laws for individual organizations, to form of membership contracts, to methods of financing, and numerous other details as to sound methods of organization. The department, of course, carries on no part of the business of any co-operative, but keeping in touch with marketing organizations, is in a position to make available to new organizations, the experience of the older and successful ones, and how to avoid some of the mistakes of those which have not succeeded. Much of the work consists of assisting co-operatives in the organization and initial stages of their business.

ENGLISH MARKET CABLE

On Thursday morning of each week during the year, the Agent-General for Ontario in London, England, forwards a cable giving a summary of market prices on live stock, cheese, bacon, butter and apples in season. Prices are also given on these commodities from other countries which compete with us on the London market. The cable arrives in time to be prepared for the noon mail on Thursdays and appears on the agricultural page of the Toronto morning papers on Fridays, and in the agricultural papers over the Province. The Agent-General also sends a monthly letter giving a general outline of the conditions as they affect the trade in the articles mentioned, and this also is given publicity through the agricultural press.

COMMUNITY HALLS

The Community Halls Act was passed in 1919 providing for grants toward the erection of community halls and athletic fields in rural municipalities. Under this Act grants have been paid to a total of sixty-four (64) such projects at the following places:

DI

1000

1920	Place	County
Binbrook Community Hall	Binbrook, Ont	Wentworth
Cobden Community Hall	Cobden, Ont	Renfrew

The grants paid on this year's halls are as follows:		Amount
. ,	Total Cost	of Grant
Wainfleet Community Park	\$6,000 00	\$1,500 00
Claremont Community Park	4,428 25	1,107 12
Sarnia Township Community Hall	5,251 30	1,312 83
Hekkla Community Hall	1,836 75	459 19
Enterprise Community Hall	7,267 69	1,816 93
Port Sydney Community Hall	6,062 25	1,515 57
Zephyr Community Hall	6,411 02	1,602 76
Bondhead Community Park	3,803 71	950 93

In addition to the above, five more projects are about completed and an additional fifteen where some steps have been taken to erect community halls and athletic fields under the Act. It is not necessary here to emphasize the decided improvement in the social life of a district where suitable and attractive accommodations are provided. Two or more visits are made by this branch to each place where this community effort is undertaken. Under the Act the site, the plans and specifications, are approved by the department before construction, and the best assistance can be given by a knowledge of the local In most cases also, the people are desirous of knowing, more than an Act and regulations can convey, the requirements of the department with regard to each particular project. In this way we have been able to maintain a rather high standard, and it can be safely said that where community halls have been erected under the Act, the people have a community building of which they are justly proud. In all cases we endeavour to assist the community to provide a plant somewhat better than they would otherwise have provided without the grant. In fact, in most of these communities there would be no community hall, but for the incentive supplied by the offer of assistance in this form. A second visit by the department is also necessary when the hall is completed for inspection, and if not entirely satisfactory, further visits are made till all details are completed and no grant is paid till the project is completed in conformity with the standard desired.

The total cost of all community halls and athletic fields erected under the Act since its inception is \$582,239.34 and the total of grants paid thereon amount to \$102,456.82 or 17.6 per cent. of the total.

COLONIZATION AND IMMIGRATION BRANCH

Some idea of the activities of the year in connection with colonization and immigration may be gained from the following figures:

Number of farm labourers placed	2.624
Number of domestics who passed through the Canadian Women's Hostel, 72 Carlton St	2.674
Of this number, new arrivals totalled.	
Number of farm labourers placed by Salvation Army	25
Number of domestics " " "	673
Number of boys " " "	470
Number of boys received at Vimy Ridge Farm (five of these have not yet been placed)	174
Number of railway certificates issued to settlers proceeding to Northern Ontario (consisting	
of 494 adults and 69 children)	380

Of this number 90 per cent. were from the British Isles, the balance being from Denmark, Holland, Sweden and Switzerland, brought out mainly by the larger transportation companies. Immigrants from these countries, however, as a rule, make excellent settlers.

VIMY RIDGE FARM

During the year an important step was taken in the launching of a plan for the settlement of boys from the British Isles on Ontario farms. In pursuance of an agreement entered into with the British Government and with the Dominion Government, arrangements were made to receive parties of boys from time to time throughout the year. A farm located about three miles from Guelph and known as the Vimy Ridge Farm, was taken over from the Settlers' Aid Commission to be used as the headquarters for receiving and distributing the boys arriving under this plan. The buildings were fixed up and enlarged so as to provide accommodation for as many as fifty boys at one time. The first party arrived in June but as the buildings at the farm were not ready at that time, this party was taken to the Ontario Agricultural College where systematic training was combined with a certain amount of practical work. Further groups arrived from time to time throughout the summer months and were looked after at the Vimy Ridge Farm. The boys remained at the farm for varying periods from a few days to a couple of weeks. They were then placed with farmers with whom they entered into an agreement of apprenticeship. The department, of course, keeps in touch with these boys and replaces any who have not been satisfactorily located the first time. It is sometimes necessary to place a boy two or three times before he gets a position for which he is best suited and in which he is most contented. The boys were around sixteen and seventeen years of age and for the most part they made good. In a few cases it has been necessary to send the boys back home, but over 90 per cent. appear to be well situated and likely to become good settlers. There is a demand on the part of the farmers of the Province for help of this nature and this plan will be developed into larger proportions in future years.

LONDON OFFICE

The office of the Agent-General for Ontario continues to render good service to the Province in Great Britain and Europe. In addition to the office at 163 Strand, London, a branch is maintained in Glasgow.

Conditions during the past year were materially affected by the general strike and the subsequent prolonged coal strike, which influenced all industry

and business in the British Islands. These conditions, however, tended to encourage emigration rather than otherwise.

The past year has been a better one than 1925 for general emigration business, and all our figures show an increase of business, and a larger number of selected settlers sent out to Ontario.

Our operations are, naturally, to a considerable extent governed by the emigration policy of the Government of Canada, and by the agreements entered into by that Government and the British Government, in connection with the Empire Settlement Act of 1922.

The past year has been notable, owing to the fact that it witnessed the cancellation of the old system of granting loans to farm workers and household workers, to assist them with their passages to Canada. The new system provides for reduced passages, in place of loans, and this year, under the new agreement entered into between the British Government and the Government of Canada, approved farm workers and household workers have been enabled to go to Ontario at a cost of £4.10 each. This is a very great improvement on the old system of loans, as it now means that the new settler commences his or her new life in Canada free of debt, with nothing to pay back to the Government.

The following example will show how the cost of these passages is apportioned. This case is that of a single farm labourer, who sailed from Belfast to Ontario, on March 27th, 1926.

	£	s. d.
Total cost of transportation	22	7 11
	22	7 11

The Government of Ontario was not directly a party to the agreement between the British Government and the Government of Canada, but the Agent-General for Ontario is authorized, under a subsidiary agreement, to nominate suitable emigrants for the above scheme, and in this way we secure all the advantages of the scheme for men and women put forward by us. This arrangement has worked very well.

There are always more married experienced workers with families available for emigration than there are of single experienced farm workers. The reason is that the married men are anxious to try a new country for the sake of the better opportunities for their children. The lack of extra house accommodation on many Ontario farms apparently limits the demand for help of this nature. However, ninety married couples with 221 dependents were sent out and on the whole they were splendid settlers. This work is greatly encouraged by reports which are received as to settlers previously sent out to Ontario. There was the case of a Scottish ploughman with thirteen children who went out from this organization in 1924. The father and the two eldest sons started work on the same farm the day after their arrival, while one of the daughters started work on the same day in the farmer's house. Four other girls were quickly placed as household workers and a year later they were still in the same positions doing well. The family had comfortably furnished their home, purchased a cow and pigs and paid back over \$500 in connection with their passages to Ontario.

The past year witnessed the completion of negotiations which have been carried on for some years past for what is known as "The Boy Scheme." For the carrying out of this scheme an agreement was completed with the British Government and the Government of Canada. It provides for sending forward boys between the ages of fifteen and seventeen, to serve as farm apprentices. Free passages are granted under the provisions of the Empire Settlement Act. All boys approved must pay the cost of medical certificate and the cost of rail fare between home and port of embarkation. They must have a sufficient amount of clothing and a supply of funds for incidental expenses after their arrival. Every effort is made in selecting boys, to secure the right type and only a small proportion of those offering are accepted. For the first season a total of 160 were passed.

Another phase of boy settlement developed during the year in the Empire Fellowship Scheme. This arose out of the Wembley Exhibition following which a number of public-spirited citizens provided a fund out of which scholarships might be granted to a limited number of boys who desired to secure some agricultural education in the Overseas Dominions, with a view to settling on the land. The fund pays £30 per year to any boys approved. This is to pay the cost of the education. It is part of the scheme, however, that the boy shall work one part of the year on the farm and thereby earn money to supplement this amount. Arrangements were made to forward a total of twelve boys under this scheme to the Kemptville Agricultural School.

The following figures, relating to the London office alone, indicate how heavy at times is the work involved in connection with out correspondence. These figures are for the twelve months ending October, 1926:

Number of inward letters received	,871
Number of outward letters	,223
Number of callers interviewed	,563

These figures are all considerably in excess of last year's totals.

In addition to keeping the opportunities of Ontario prominently before 3,500 shipping agents, who influence settlement to a large extent this office has endeavoured to advance Ontario industries on every opportunity. One plan adopted was to utilize the window space of the office on the Strand, which is one of the busiest thoroughfares in the world, to display Ontario products, making frequent changes in order to give a fair representation and show the variety of the output of the Province. Special attention has been given to emphasizing the mineral resources of Ontario, especially among financial and mining men. These efforts have aroused a great deal of inquiry.

During the year 151,405 copies of booklets descriptive of Ontario have been distributed through this office, besides thousands of leaflets and other publicity matter. Cinemetographs have been in constant use not only through our portable machine, but through circulation among the motion picture houses. Lantern slides are also loaned to school masters, lecturers and others.

This office renders assistance in supervising the exhibits from the Province of Ontario at the London Dairy Show and at the Empire Fruit Show. At both of these shows Ontario products won many prizes and the publicity resulting was of great advantage to the Province.

AGRICULTURAL REPRESENTATIVE BRANCH

Office Work

The following table shows statistically the extent to which the local office is used by the farmers in the various counties of the Province:

-								

The rural people of Ontario are making heavier demands each year upon the services of the Agricultural Representatives. Fortunately, their willingness to co-operate and assist has increased proportionately and therefore the accomplishments of the past year surpass those of any previous year.

Resignations have been received during the year from the Representatives in the Counties of Norfolk, Essex and Lincoln. The following transfers have been effected:

S. B. Stothers from Huron to Essex County.

A. A. Knight from Victoria to Leeds County.

E. F. Neff from Leeds to Lincoln County.

M. H. Winter from Renfrew to Victoria County.

A. F. Ross from Fort William to Norfolk County.

SENIOR EXTENSION WORK

Live Stock Improvement.—The Better Live Stock Campaign inaugurated seven years ago has since been actively carried on in all counties, the office of the Agricultural Representative acting as a clearing station for the sale and purchase of pure-bred breeding stock. The live stock breeders and the provincial and federal live stock branches have been active co-operators in the Better Stock Campaign.

Cattle—Cow Testing.—For some years cow-testing work has been carried on in Ontario under the direction of the Federal Department of Agriculture, but on February 1st, 1926, the testing work in Ontario was taken over by the Ontario Department of Agriculture. This work is being organized and promoted by the County Representatives with the active co-operation of the Dairy and Live Stock Branches. Broadly speaking, the part to be taken by the farmer and the Department is as follows:

By the Producer:

- 1—Each farmer to supply his own weighing and sampling equipment such as scales, milk box, sample bottles, and dipper.
- 2—To weigh and take a sample of milk of each cow night and morning on three days each month, say the 10th, 20th and 30th, and record weights on forms supplied.
- 3—To deliver samples to testing station or centres as determined and to secure return of box and empty bottles.
- 4—To agree to keep a record for the full year—lactation period—of every cow in the herd.
 - 5—To pay a fee of fifty cents per cow per year.

By the Department of Agriculture:

- 1—To assist in organization work, whether for individual farmers or in the formation of Cow Testing Associations and to accept samples from either for testing.
- 2—To do such clerical work in the keeping of records as may be necessary and to interpret the results.
- 3—To supply suitable accommodation and testing equipment such as Babcock tester, glassware, sulphuric acid, corrosive sublimate preservative tablets, record forms, herd books, etc., and test each sample for butter-fat once each month.

- 4—The testing to be done by the staff of the Dairy Branch at any one of the following places:
 - (a) Cheese factories.
 - (b) Creameries.
 - (c) Offices of Agricultural Representatives.
 - (d) Special testing stations.
- 5—To make provision for the issuing of a production certificate to any cow which reaches a satisfactory standard of production of milk and fat in twelve consecutive months and to maintain a cow testing register for all cows which have qualified.

Previous to the Department taking over Cow Testing work on February 1st last there were twenty so-called Testing Associations with a membership of 648 farmers and 7,598 cows under test. Of this number 6,341 cows were being tested under Federal supervision free of charge. Since the inauguration of the Provincial policy, 517 farmers in twenty-two counties have listed 6,013 cows on a yearly testing basis. To date there are thirteen active Cow Testing Associations formed with 365 members and 3,591 cows.

Since Cow Testing under the new policy has not been in effect a year as yet it has been found difficult to secure comparative figures to show the results of herds for a full lactation period. However, the following statistics have been compiled to illustrate the value of cow testing work.

In Haldimand County for a period of seven months—May to November, 1926, inclusive—with thirty-five herds and 294 cows under test, the following information is quite striking:

Average Production Per 6	ODUCTION PER COM	٠
--------------------------	------------------	---

	Milk	Butter Fat
High—Herd A Low—Herd B High—Cow A Low—Cow B	5,259 " 11,160 "	277.6 pounds 182.5 " 354.4 " 112.5 "

The difference between the high herd owned by A and the low herd owned by B per cow during the seven months was 3,334 pounds of milk which valued at \$1.50 per hundred weight means \$50.01 per cow. In a herd of ten cows it means an additional revenue of over \$500.00 for herd owner A. Herd owner B by eliminating the low producers could in a few years increase his herd production materially.

The Norfolk County Cow Testing Association was organized in March, 1926, with 125 members and 867 cows under test.

Comparison of Best and Poorest Cow Under Test for Period of Nine Months, March—December, 1926

	Total Pounds	Value of	Total Pounds	Average per cent.
	Milk	Milk	Butterfat	Butterfat
Best cow	14,808	\$303.56	561	3.7%
	3,498	82.20	149	4.3%
Difference	11,310	\$221.36	412	.6%

COMPARISON OF 100 BEST COWS AND 100 POOREST COWS FOR PERIOD OF NINE MONTHS

	Average Pounds	Average Pounds	Average per cent.
	Milk	Butterfat	Butterfat
100 best cows	9,256 pounds	319.7	3.5
	6,211 "	202.7	3.25
Difference	3,045 pounds	117.0	.25

Value of increase, \$67.45.

Note.—Milk is valued at \$1.95 per cwt. for 3.5 per cent, milk and 5 cents per 100 pounds added or deducted for each 1/10 of a point above or below 3.5 per cent.

In Peterborough County for a period of six months from May to October, 1926, inclusive, the average production of the best and poorest herds is as follows:

Comparison of Best and Poorest Herd

	Number	Pounds	Average	Pounds
	Cows	Milk	Test	Butterfat
Best herd	7	7,244	3.2	231.8
	10	4,782	3.4	162.5
Difference	••••	2,462		69.3

Value of increase at \$2 per cwt., \$49.24.

Comparison of Best and Poorest Cow

	Pounds Milk	Value at \$2 per cwt.	Per cent. Fat	Total Pounds Fat	Value at 35c per Pound
Best cow	8,304 3,559	\$166 08 71 18	3.6 3.3	298.9 118.5	\$104 61 41 47
Difference	4,745	\$94 90	.3	180.4	\$63 14

Comparison of Twenty Best and Twenty Poorest Cows

	Total Pounds	Average	Total Pounds
	Milk	Butterfat Test	Butterfat
Twenty best cows	7,622	3.19	242.1
	4,478	3.36	148.8
Difference	3,144		93.3

The Agricultural Representative for Peterborough County says as follows in reference to above: "The figures are interesting in that the average test of the twenty cows classed as poor is slightly higher than the average of the twenty classed as good. It would appear that better methods of feeding might make some of the cows in the poorer class much higher producers and thus become more profitable to their owners."

The Wentworth Cow Testing Association was organized in June, 1924, with a membership of 123 and 1,385 cows enrolled. At the completion of one year's work it was found that the average milk production per cow in the association was 8,500 pounds.

Of the 1385 cows on test, 604 gave an average test below 3.25 per cent.

" " 781 " " above 3.25 "

" " 239 " " " 3.50 "

" " 4.0 "

Comparison of the Best and Poorest Cow on the Basis of Whole Milk and Butterfat Production June, 1924—July 1925

	Whole Milk		Ві	Butterfat	
	Pounds of Milk	Value at \$2 per cwt.	Per cent. Fat	Total Pounds Fat	Value at 40c per pound
Best cow	13,630 5,135	\$272 60 102 70	38 23	540 118	\$21600 47 20
Difference	8,495	\$169 90	15	422	\$168 80

From the above table it is quite striking that the best cow gives 8,495 pounds of milk—practically the average for the association—and 422 pounds of fat more than the poorest cow with a cash return of \$169.90 more in one year.

Comparison of the 100 Best and 100 Poorest Cows on Basis of Whole Milk and Butterfat Production for Period June, 1924—July, 1925

	Average Pounds of Milk per Cow	Value at \$2 per cwt.	Per cent. Fat	Average Pounds Butterfat per Cow	Value at 40c per Pound
100 best cows 100 poorest cows		\$212 12 130 92	3.43 3.35	360 229	\$144 00 91 60
Difference	4,060	\$81 30	. 08	131	\$52 40

If we were to take three farmers on one side of the road with ten cows each of the first class and three farmers on the other side of the road with ten cows each of the second class, the farmers who had the good cows would each receive \$812.00 more money for their product than those possessing the poorer cows.

Results of Farmers Completing their Second Year of Testing—Happily these same men have carried on their testing and our Agricultural Representative reports as follows: "The outstanding lesson which we have been able to find from men who have completed their two years' records is that the average butter-fat test for the herd over the year previous has invariably increased, although the milk production has not increased in many instances. I believe the reason for this is the fact that farmers having low tests find that they have cows which are producing a good flow of milk but which at the same time are low testers. They got rid of these older animals which were producing a large amount of milk and as a result the young animals which came on were not able to give as high an average."

The following are the results of the increased average butter-fat test of thirteen farmers who have sent in tests every month for two years in the Wentworth Cow Testing Association:

		July, 1924-July, 1925	July, 1925-July, 1926	Increase
		Per cent.	Per cent.	Per cent.

Table Showing Group of Eight Farmers with Average Production of Milk and Butterfat During 1924-25 and 1925-26 in Wentworth County

	1924-25	1925-26	Average Increase per Cow
	Pounds	Pounds	Pounds
Farmer A—Butterfat	241	288	47
Milk	7,956	9,566	1,610
Farmer B—Butterfat	322	412	90
Milk	8,610	10,891	2,281
Farmer C—Butterfat	316	329	13
Milk	8,792	9,665	873
Farmer D—Butterfat	234	264	30
Milk	7,693	8,001	308
Farmer E—Butterfat	297	328	31
Milk	8,673	9.540	867
Farmer F-Butterfat	241	268	27
Milk.	7,116	7,928	812
Farmer G—Butterfat.	285	367	82
Milk.	8.861	10,458	1.597
Farmer H—Butterfat.	244	322	78
Milk	7,595	9,857	2,262

The Agricultural Representative for Wentworth remarks: "These farmers made careful elimination of certain cows and good buying of others and with improved feeding methods have increased their butter-fat test and also milk production."

The figures for the past year in Wentworth County have just been compiled and it is interesting to note the comparison between the 100 best cows in 1924-25 with the 100 best cows in 1925-26 and see whether any progress has been made.

Comparison of 100 Best Cows, 1924-25 with 100 Best Cows, 1925-26

	Average Pounds of Milk per Cow	Value at \$2.00 per Cwt.	Average Per Cent. Fat		Value of Fat at 40c. per Pound
100 Best Cows, 1924-25	10,606 11,519	\$212 12 230 38	3.43 3.41	360.00 389.18	\$144 00 155 67
Increase	913	\$18 26	.02	29.18	\$11 67

Comparison of 30 Poorest Cows, 1924-25 with 30 Poorest Cows, 1925-26

	Average Pounds of Milk per Cow	Value at \$2.00 per Cwt.	Average Per cent. Fat		Value of Fat at 40c. per Pound
30 Poorest Cows, 1924-25	5,346 5,733	\$106 92 114 66	3.0 3.64	171 206.5	\$68 40 82 60
Increase	387	7 74	. 64	35.5	\$14 20

In submitting these figures the Agricultural Representative states that: "The average of the 100 best cows has increased by nearly 1,000 pounds of milk over the same number the year previous. Probably the outstanding lesson is the showing made by the thirty poorest cows over the same number the previous year in which is shown an increase of nearly 400 pounds of milk and thirty-five pounds of butter-fat."

Swine—The percentage of select hogs is steadily increasing in Ontario and in some sections there is quite a marked increase while in others the percentage increase is not so great. Many grading demonstrations and special swine courses have been held and these have done much to popularize and explain the value of hog grading. In conjunction with the Provincial and Federal Live Stock Branches, six bacon hog fairs were held. The following table gives the statistics in connection with the Bacon Hog Fairs held in Ontario during 1926:

County	Place	Total Number Entries at Fair	Total Number Hogs Shipped to Market	Total Attendance
Northumberland Perth Simcoe Waterloo	Stirling	75 103	90 149 172 46 240 64	250 325 450 300 300 700

During this year the Representatives organized 103 Bacon Hog Clubs and the Provincial Live Stock Branch supplied pure-bred boars for these clubs. In some counties a record of performance of these boars has been made and invariably the results show that some excellent breeding boars have been distributed, and they are having a marked influence in improving the quality of Ontario hogs.

Sheep—Sheep extension work has been carried on during 1926 with the co-operation of the sheep promoters of the Dominion Live Stock Branch. Docking. castrating and dipping demonstrations have been held in various counties and permanent dipping tanks have been installed as follows:

County	No. of Tanks In- stalled, 1926	No. of Sheep Dipped
Brant Bruce Carleton Dufferin Durham Frontenac Grenville Grey Hastings Huron Leeds Lincoln Middlesex Northumberland Ontario Oxford Peterborough Prescott and Russell Rainy River South Simcoe Victoria Welland	2 9 2 7 5 4 11 12 7 1 3 8 12 6 8 3 1 1 3 3	1,090 100 700 200 1,200 105 1,684 1,387 618 25 1,345 5,500 1,493
Wellington	134	$\frac{5,268}{21,065}$

In co-operation with the Provincial and Federal Live Stock Branches, Lamb Fairs were held in four counties and 1,776 lambs were exhibited and very substantial prizes paid and from these Fairs, 1,643 market lambs were sold at a premium. In some counties, Ram Clubs have been organized and in many sections, high class purebred rams are heading flocks of sheep.

The following table gives statistics of the Lamb Fairs:

County	Place Where Fair was Held	Number of Entries	Number of Lambs Shipped to Market
Lanark Peterborough Manitoulin Manitoulin	Middleville Franklin Havelock Little Current Manitowaning Emo	390 356 140 254 370 266	285 304 96 375 392 191
Totals		1,776	1,643

Poultry—During the past year the interest in poultry has been very keen and the Representatives have had many requests for assistance in poultry culling and management. In some counties intensive culling campaigns have been carried on and successful co-operative shipments of culls have been made. Culling schools have again been organized and junior farmers trained in poultry culling. These young men have then culled several flocks in the county at a nominal charge per bird. In all poultry extension work the Poultry Department of the Ontario Agricultural College has given excellent advice and practical assistance.

The following table gives the statistics according to counties:

POULTRY CULLING

	Number of	Total	Number of	Total Birds

FIELD CROP IMPROVEMENT

Alfalfa Campaign—During the winter of 1925-26, an intensive alfalfa campaign was carried on in the Province of Ontario. The Alfalfa Campaign Committee made a careful survey of the Province and outlined plans and provided the necessary organization for conducting the campaign. It was decided to have a Province-wide campaign but to concentrate on the Counties of Elgin, Perth, Dundas and Carleton. In the Counties of Elgin and Perth there was a very marked increase in the acreage of alfalfa seeded in 1926 and in Dundas and Carleton the acreage of alfalfa was also materially increased. Over 200 per cent, increase in these four counties was indicated by the information coming to the offices of the Agricultural Representatives. The County Representatives after analyzing local conditions arranged for holding meetings, sent out circular letters and bulletins and assisted in locating good seed and securing nitro-cultures. The result was an increase of about 75 per cent. in the acreage sown to alfalfa during the year. Figures compiled by the Agricultural Representatives indicate a new seeding of 378,663 acres. After allowing for winter killing to the extent of 68,455 there was left according to this estimate This compares with an estimate of 748,473 acres by the Statistics Branch. Thus a substantial permanent addition has been made to this important fodder crop.

The large increase in the alfalfa acreage is very gratifying and was brought about largely by the activities of all those interested in the campaign. The reasonable price of alfalfa seed as compared with red clover seed and the recognition of the value of alfalfa as a hay crop were also influential factors in the increased acreage. The county newspapers and agricultural press gave strong support to the campaign and published many valuable articles regarding alfalfa. Service Clubs, Boards of Trade and Chambers of Commerce also supported the campaign. The following table shows the numbers of alfalfa nitro-cultures distributed to farmers during 1924, 1925 and 1926.

	1924	1925	1926
Ottawa	1,090 3,693	1,344 3,445	3,402 10,861
Totals	4,783	4,789	14,263

These figures further substantiate the statement that the campaign was a decided success and soon we may expect the Province of Ontario to have well over one million acres of alfalfa.

In 1925, the Province of Ontario stood eighth in acreage of alfalfa as compared with the various States of the United States; being exceeded only by Nebraska, Kansas, Montana, Colorado, Utah, Idaho and California. These states are all west of the Mississippi and thus Ontario leads in alfalfa acreage as compared with any state east of the Mississippi valley.

The production of hardy alfalfa seed has been an important cash crop with many Ontario farmers, particularly in the Counties of Peel, York and Halton which produce approximately sixty-five to seventy per cent. of the seed grown in Ontario. In comparison with the States of the Union, Ontario stands second in the production of alfalfa seed being surpassed only by the State of Utah.

At the present rate of increase we may soon expect Ontario to lead in acreage of alfalfa and also in the production of seed.

European Corn Borer—Due to the ravages of the corn borer the acreage of corn in the corn growing counties has been materially decreased and the possibilities are that the acreage for 1927 will be further decreased. An Act for the Eradication of the Corn Borer was passed in 1926 and as a result of this Act the Counties of Essex, Elgin, Kent, Lambton, Middlesex, Norfolk, Oxford and Prince Edward have appointed inspectors to assist in the extermination of the borer and enforce the Act. These inspectors are working under the direction of the Provincial Entomologist. Owing to the very wet fall it has been impossible for farmers to clean up and plow their corn fields. However, in the majority of counties the inspector has the support of the people in enforcing the Act. In all the infested counties the Representatives are actively carrying on an educational campaign for the destruction of the corn borer.

SPRAY SERVICE

In 1925, a special spray service was inaugurated in eight counties and this year the same service was continued and extended to eighteen counties. The Representatives in the fruit growing counties studied their problem and received assistance and advice from Fruit Growers' Associations, Vineland Experimental Station, the Ontario Agricultural College and the Fruit Branch, as well as prominent fruit growers. Special spray meetings were arranged, timely spray bulletins prepared and distributed and regular personal visits made to members of the spray ring. The County Representatives have received many letters from growers expressing appreciation of the service and requesting that it be continued in 1927. In all cases where the spray service recommendations were followed the percentage of No. 1 apples was increased, and in many cases as high as ninety-five per cent. clean fruit was reported.

The following table gives statistical information:

County	Number of Applications	Number of Men Receiving Service
Brant	19 49	19 49 67
Durham Grenville. Grey. Hastings.	67 7 5 12	7 5 7
Huron. Leeds. Northumberland	27 13 55	27 13 55
OntarioPeelHalton	10 7 35	10 7 35
Lincoln	201 12 67	201 12 49 30
Middlesex Norfolk Prince Edward Ventworth	45 247 151 25	247 151 25
Total	1,054	1,016

Experimental and Demonstration Work—In co-operation with other departments the County Agricultural Representatives carry on much experimental and demonstration work. These experiments and demonstrations cover a wide range of subjects such as fertilizers, variety tests of grains, fruits and vegetables and experiments for the control of various diseases and insects.

Drainage—In many counties the farmers are interested in under-drainage but are waiting until economic conditions adjust themselves and thus make it possible for them to secure tile at a reasonable price.

Farm Labour—In counties where there is no permanent employment office the Representative acts as an official of the Immigration Branch and assists the farmers in securing suitable help. Reports would indicate that a fairly good class of farm labour is being secured by Ontario farmers.

County Advisory Agricultural Councils—These boards appointed by the county councils have been very active in some counties and are of material assistance to the County Representative. They usually meet two or three times a year and assist in planning and carrying out the community and county projects.

Farmers Educational Tours—In many counties the Representatives organize farmers' tours. These trips are highly educational and also serve as an advertisement for the counties taking the trips. In Southwestern Ontario the Counties of Essex, Kent and Lambton have an annual tour to some point in the United States. The County of Durham had a farmers' bus trip around Lake Ontario and the farmers of Ontario County had a trip to the O.A.C., Guelph. All of the counties assisted in organizing for the Farmers' Week at the Ontario Agricultural College, Guelph.

COUNTY EXHIBITS AT C.N.E., TORONTO

This year the Counties of Dufferin, Durham, Northumberland, Grey, Hastings, Kent, Lincoln, Norfolk, Peel, Wellington and Wentworth had exhibits at the Canadian National Exhibition. These counties all had excellent exhibits displaying the products of their farms and industries which advertised their potentialities. These highly educational exhibits were viewed and very favourably commented on by many interested spectators both rural and urban. These very attractive county exhibits were arranged and displayed by the County Agricultural Representatives assisted by the county council and local agricultural organizations. Free space was provided by the Canadian National Exhibition but each county was responsible for providing and arranging their own display material.

JUNIOR EXTENSION WORK

Rural School Fairs-The value and popularity of Rural School Fairs, continue to grow throughout Ontario. In spite of a very wet and disagreeable school fair season the number of entries was normal and the enthusiasm of the children great. The quality of the exhibits was also very good considering the poor weather at harvesting time. During the season of 1926, there was a total of 279,381 entries or an average of 522 per school fair. This year, 4,655 schools took part in 535 school fairs which were attended by 167,504 children and 210,014 adults. The following quantities of high class seeds, eggs and baby chicks were distributed by the Ontario Department of Agriculture for School Fair purposes during 1926:

POTATOES. Irish Cobblers Green Mountains Dooleys	595 351 375				
Total	1,321	bags, distributed in	n 5-lb, lots	s to 23,77	8 pupils

23,400

69,400

13.787 dozen

4,795 chicks

In 1926, there were 40,420 Ontario farm boys and girls receiving small lots of grain and potatoes. The seed potatoes were fully certified and were the best obtainable in the Province of Ontario. The seed grain was registered and was of a very high quality. It is almost impossible to estimate the value of field crop improvement brought about by the distribution of this high class seed to so many farms in the Province. The distribution of these small lots of seed has in many cases been the means of many farmers beginning to produce high class seed grain.

Educational Features—In addition to the regular classes the School Fair committees have arranged for special competitions and demonstrations to create interest and develop a spirit of rivalry along certain definite lines. Some of the major competitions were Health, Public Speaking, Health Poster, Stock Judging, Stock Naming, First Aid, Home Canning, and Poultry Culling. In each school the high pupil receives a Certificate of Honour signed by the Minister of Agriculture and the local Agricultural Representative.

In some cases, School Fairs are held jointly with the local fall fairs. Generally speaking, these school fairs materially increase the attendance and interest of the fall fairs but the children do not have the same incentive to work as they feel that they are a side line of the fall fair and the day does not mean so much to them as where they have a fair of their own.

This year all the county representatives report that they have received excellent support and co-operation from the local trustees, ratepayers, agricultural organizations and the Department of Education represented by school teachers and public school inspectors.

Championship School Fairs—These Championship School Fairs are usually held in conjunction with one of the larger fall fairs located in the central part of a county and this arrangement seems to work out to the mutual satisfaction of all concerned. By bringing to one central point the champion pupils and champion exhibits much good is accomplished. The pupils and adults have an opportunity of mingling together and there is a tendency toward developing a better county spirit. This year Championship School Fairs were held in the following counties and districts: Brant, Carleton, Dundas, Elgin, Frontenac, Halton, Kenora, Lanark, Manitoulin, Norfolk, Oxford, Perth, Peterborough, Rainy River, Victoria, Welland and Wentworth. In many other counties school fair champions were brought together to decide the county champion or championship team in such contests as public speaking, live stock judging or home canning.

Poultry Breeding Centres—The Ontario Poultry Breeding Centres supervised by the county representatives not only supply eggs and baby chicks for school fair purposes, but also supply neighbouring farmers with eggs and breeding stock. During the 1926 season farmers ordered 7,160 dozen eggs and bought 1,233 cockerels for breeding purposes. Each year poultry extension men from the Poultry Department of the Ontario Agricultural College inspect the breeding station flocks and cull them, thus eliminating any off-type or inferior birds. This year most of the breeding station birds were blood tested for white diarrhoea. The Ontario Agricultural College and the Kemptville Agricultural School supplied high quality male birds for the use of the breeding stations. School pupils had the choice of three breeds, namely, Barred Rocks, White Wyandottes or White Leghorns. The following statistics show according to breed the number of dozen eggs and baby chicks distributed:

Breed	Number Dozen Eggs	Number Baby Chicks	
Barred Plymouth Rocks	12,829 402 556	3,747 78 970	
Totals	13,787	4,795	

Baby chicks were distributed in the following counties: Durham, Dundas, Halton, Essex, Leeds, Northumberland, Oxford, Peel, Waterloo.

The Home Garden Contest is specially arranged for teen-age girls for the purpose of creating interest in farming as well as providing a greater variety of vegetables for the use of the farm family. Gardens are judged during July and August and prizes awarded for the best kept gardens. The following varieties of seeds were distributed at 50 cents per package.:

Beans—Golden Wax.
Beets—Detroit Dark Red.
Cabbage—Copenhagen Market.
Carrots—Chatenay.
Citrons—Colorado Preserving.
Corn—Golden Bantam.
Cucumber—White Spine.
Lettuce—Grand Rapids.
Onions—Yellow Globe Danyers.

Pickling Onions—Barletta.
Parsnips—Hollow Crown.
Peas—American Wonder.
Radish—Scarlet White Tip Turnip.
Squash—Warty Hubbard.
Swiss Chard—Silver.
Spinach—Victoria.
Tomatoes—Bonny Best.
Onion Sets—Yellow.

Boys' and Girls' Clubs—During 1926 Boys' and Girls' Clubs were organized in ten counties. These clubs were organized for special purposes and in many cases were fostered by service organizations such as Rotary and Kiwanis. The following table shows according to counties the number of clubs organized during 1926:

County	Name of Club	Membership
Carleton	Ottawa Kiwanis Potato Club	45
•	Ottawa Rotary Poultry Club	44
	Whyte Variety Test in Seed Grains	12
Essex	Soy Bean	87
	Dent Corn	102
Elgin	Jersey Heifer Club	10
Frontenac	Kingston Kiwanis Potao Club	30
Grenville	Brockville Rotary Potato Club	11
grey	Sheep Club.	7
Kent	Corn Club	85
Middlesex	Four Sheep Clubs.	42
Leeds	Brockville Rotary Potato Clubs. Ottawa Kiwanis Potato Club	
	Barrie Kiwanis Potato Club	28
		68 19
Kennew	Renfrew Rotary Farm Boys' Potato Club	14
	Total Number of Clubs.	18
	Total membership	620

The benefits and results of Boys' and Girls' Club work are very pronounced as is illustrated from the following extracts taken from the annual report of the Carleton County Representative:

"In the Potato Club one bag of certified Dooley potatoes was distributed to each contestant. In the Rotary Club one setting of pure-bred eggs of breeds specified was given to each contestant. In the variety test of seed grains, samples of oats of the following varieties, sufficient to plant five rows one rod long, were distributed: Gold Rain, Alaska, Banner, Victory, O.A.C. No. 144.

"Our Potato Contest was very successful. The object on the part of the Kiwanis Club was to have an opportuity to call on and make the acquaintance of our farmers with the aim in view of creating a better understanding between city and rural folk, also to help in the adoption of approved methods of potato culture by the boys in their teens. This contest also included boys from Russell County, and there were seventy-five boys in all, forty-five from Carleton and thirty from Russell. The boys were obliged to grow and care for the crop and exhibit one-half bushel at the Ottawa Winter Fair. A very attractive exhibit was displayed at the Ottawa Winter Fair, and we are pleased to report that forty-two of our forty-five contestants exhibited their potatoes at the Fair (twenty boys from Russell also exhibited their lots).

"The boys and their fathers were entertained at luncheon on Friday, November 26th, in Ottawa by the Kiwanis Club. There was a full turnout of the boys and their fathers or older brothers and in all there were 350 at the luncheon. This gathering had the opportunity of hearing Mr. W. B. Roadhouse, Deputy Minister of the Ontario Department of Agriculture, as the special speaker for the occasion. One of the contestants, Ritchie Bell, spoke in an able manner, surprising to many of the Kiwanians, of the appreciation of the boys in Carleton County for all the Kiwanians had done for them. The results were all that our fondest hopes anticipated. Most of our boys were greatly benefited by the acquaintance of their city friends and they also in, most cases, learned the benefits of using good seeds and following improved methods in growing potatoes. The club prizes were awarded at this very happy function.

"The results as gathered from our field inspection and records contributed by the boys

"The results as gathered from our field inspection and records contributed by the boys point to the value of good seed and proper care. Where proper care was given, fair profits usually followed. In a few cases where losses were experienced, late blight and too wet and cold a spring were responsible. The largest yield of the contest was forty bushels from the one bag of seed and the grower Donald Graham, Britannia Bay, had a profit of \$323.00 per acre. The winner of the contest, Arthur Stewart, of Kinburn, had a yield of thirty-six bushels, a profit of \$247.00 per acre and a field score of ninety-two and exhibit score of eighty-eight, these being the highest scores in the contest. This same boy showed potatoes in the regular classes at the Ottawa Winter Fair and was awarded lifth place in a strong class. The Kiwanis Club and the farm boys expressed their appreciation of the contest and the better understanding it had created."

ROTARY POULTRY CONTEST

"The aim and object of this competition was the same as that by the Kiwanis Farm Boys' Potato Club, that a medium be established through which the members of Rotary could become better acquainted with families in Carleton County and that the rural people get better acquainted with men of the city, and also that our girls and boys on the farm endeavour to learn the poultry business.

"The contest is in two divisions, summer and winter. The summer contest was based on management from the time eggs were set till pullets were put in winter laying quarters. Improvement in conditions for poultry about the farm counted for most in the summer contest. It is gratifying to report that a number of the girls and boys received wonderful co-operation from their parents in improving the housing conditions for the home flock. We found ten new houses were erected or about to be erected. The winner of the contest, Alfred Kennedy, Dunrobin, seventeen years of age, remodelled an old building to conform to the most modern type of house and had his pullets housed in September and they were laying in October. One boy trapnested his flock of thirty pullets and by the end of October he had one pullet that had laid twenty-seven eggs on twenty-seven consecutive days. This boy was well acquainted with modern poultry practices before the contest started and although an expert with his flock did not score as high as the boy who brought the home flock from very ordinary conditions to a high standard.

"The Rotary Club entertained the girls and boys to a luncheon in the Chateau Laurier on Monday, November 22nd, at which function we had the privilege of hearing the Hon. J. S. Martin, who was the guest of the club and acted as special speaker for the function. A pleasing part of the programme was the fine style in which the appreciation of the contestants was expressed in two minutes speeches from Allan Seabrooke, North Gower; Miss Louise Gourlay of Carp, and Alfred Kennedy of Dunrobin. The girls and boys received many very fine prizes from the Rotary Club and the highest scoring individuals, Alfred Kennedy, Dunrobin, and Miss Louise Gourlay, Carp, received a letter from the Minister, entitling them to a two weeks' course at the Kemptville Agricultural School."

Junior Farmer Associations—In the Province of Ontario there are at the present time 110 Junior Farmer Associations with a total membership of 3,694. There are eight county associations with a membership of 857. The members of these associations are the brightest and keenest of our farm boys. The construction programmes carried out by these organizations are very effective from a community standpoint and are very influential in developing leadership among the members of the association. Some of the main features of the Junior Farmers' programmes have been as follows:

1—Stock and Crop Judging Competitions.

2—Plowing Competitions.

3—Debating Leagues. 4—Athletic Contests.

5—Dramatic Contests.

6-Public Speaking Contests.

7—Social Activities.

8—Community Improvement.

9-Tours and Excursions.

Encouraged by the inspiration and progressive work which accrued from the conferences held last year, Junior Farmer conventions were again held in Guelph and Kemptville and in addition one was arranged at Belleville for the central counties of Eastern Ontario.

Belleville, October 20th—About sixty delegates and members were present from the Counties of Victoria, Durham, Northumberland, Peterborough, Hastings, Prince Edward, and Lennox and Addington. The programme included addressed by Junior Farmer leaders from other counties and judging by the keen participation in discussion, we may expect an extension in Junior Farmer work in this area. The Belleville Kiwanis Club and the Hastings County Junior Farmer organizations co-operated in entertaining the visitors at luncheon at which Principal W. J. Bell, of the Kemptville Agricultural School addressed the gathering on "Some of the outstanding problems in Eastern Ontario-Agriculture."

Kemptville, October 21st—In general arrangement this second annual convention was similar to the one held last year. It coincided with the girls' conference and part of the programme was conducted jointly. There was a notable difference between this conference and the first one. As reports were given by the delegates from the county and branch units it was evident that Junior Farmer work in the area had made excellent progress during the year and the 1925 meeting is given credit for contributing materially to this success. About fifty young men were in attendance.

Guelph, November 26th, 1926—The largest convention was held at Guelph as this is the heart of the most highly organized district. Over 100 delegates and members attended and many excellent suggestions were offered by the young men for the improvement of their organizations. The programme of this convention is included and is somewhat similar to those of the other meetings.

JUNIOR FARMER CONFERENCE

Massey Hall, O.A.C., Guelph, Friday, November 26th, 1926

Morning Session

Chairman—N. C. McCully, St. Marys, Perth County

10.00 a.m.—Call to Order.

10.05 a.m.—Introductory Remarks—R. S. Duncan, Director, Agricultural Representative Branch, Toronto.

10.15 a.m.—What Extension Department, University of Toronto Can Offer Rural Organizations Such as Junior Farmer Associations-W. J. Dunlop, Director, Extension Department, University of Toronto, Toronto.

10.40 a.m.—Discussion.

10.45 a.m.—Assistance Offered by Extension Department, O.A.C.—L. Stevenson, Director of Extension, O.A.C., Guelph.

10.55 a.m.—Discussion.

11.00 a.m.—The County Junior Farmer Association Programme—Richard Baycroft, Aurora, York County.

11.15 a.m.—Discussion.

11.20 a.m.—The Branch Junior Farmer Association Programme—Clarence Dennis, Brampton No. 6, Peel County.

11.35 a.m.—Discussion.

11.40 a.m.—Organization of Social Recreation—A. McLaren, B.S.A., 86 Adelaide St. E., National Council, Y.M.C.A., Toronto 2.
12.15 noon—Joint Luncheon with Junior Institute Delegates in College Cafeteria.

Chairman—Harry J. Laidlaw, Brampton No. 1, Peel County.

Address-J. B. Reynolds, President, O.A.C., Guelph.

1.45 p.m.—Massey Hall. Committee—Division into three groups, R. S. Duncan.
Committee No. 1, Chemistry Building. Chairman, Roy Thomson, Glanford
Station, Wentworth County.

Subject: Programme—Zone, County and Branch.

Committee No. 2, Chemistry Building. Chairman, Alex. B. McKague, Teeswater, Bruce County.

Subject: Developing Leaders-Encouraging Non-participating Members-Attracting Possible Members.

Committee No. 3, Massey Hall. Chairman, Jas. Burnett, Elora No. 3, Weilington County.

Subject: Financing Junior Farmer Associations. Committee No. 4. Chairman to be appointed.

Subject: Resolutions.

3.00 p.m.-Massey Hall. Chairman, Lloyd Snyder, Elmira, Waterloo County.

Presentation of Reports of Committees in above order.

4.15 p.m.—College Gymnasium. Demonstration, Social Recreation Programme by A. McLaren. Participated in by Junior Institute and Junior Farmer groups.

The Junior Institutes—The activities of the Junior Institutes are following closely with those of the Junior Farmers' organizations. At the conclusion of short courses, Junior Institutes are organized and these clubs actively participate

in community development. By combining and co-operating in programmes and social life, much enthusiasm is created and many projects are successfully completed. The representatives have co-operated with the Women's Institute Branch in organizing and carrying out various community and county programmes.

Champion Juniors' Trip to Chicago—The trip to Chicago was given as a championship prize to juniors in the various county competitions. In 1926, there were fifteen boys and nine girls attended the International Live Stock Exposition and Boys' and Girls' Club Congress held at Chicago. This year the group was in charge of E. I. McLoughry, Agricultural Representative for Waterloo County, and Miss E. Slicter, of Kitchener. The following is a list of those taking the trip.:

County	Name and Address	Donor of the Prize
	Douglas Dunton, Brampton, No. 6 Geo. Wilkinson, Cheltenham Fred McKay, Jr., Stratford, No. 2	Junior Farmers' Association. Junior Farmers' Association. " Perth County Council and Perth County Junior Farmers' Ass'n.
Victoria	Reuben Wettlaufer, New Hamburg Gilbert Faris, Bradford J. Milton Fisher, Woodville Wm. Iutzi, Baden	Perth County Council and Perth County Junior Farmers' Ass'n. Municipal Bankers Corp., Ltd. Local Funds. J. M. Schneider Packing Co., Kitchener.
Wellington	Elmer Stoltz, Ayr, No. 1	Kitchener. Wellington Junior Farm Boys, S.S. No. 7, Maryboro.
Wentworth	Grant Cranston, Glanford Station Osborne Sager, St. George	Royal Bank of Canada. S.S. No. 5 Beverly, and School Fair Association.
York	Sandy Latimer, Sutton West Elton Armstrong, Armitage	
Simcoe S Wellington	Miss Elga Lint, Cayuga, No. 3	County Council. Peel Junior Institute. "" Women's Institute. Hon. H. Guthrie. Wellington Junior Farm Girls. Hamilton Spectator. Junior Institute. School Section.

Eastern Ontario Junior Farmers' Field Day at Kemptville—The fourth annual field day was held at the Kemptville Agricultural School on June 16th. This event has become very popular with the young people of the eastern counties and this year between 3,000 and 3,500 attended. An interesting athletic programme was conducted and opportunity was afforded also of inspecting the crops and herds and of meeting members of the school staff. Carleton County was again successful in winning the trophy awarded annually for the highest number of points in sport events.

Junior Farmers' Plowing Competition—The home plowing competitions have been big factors in encouraging better plowing in the various counties. The weather was so bad during the past autumn that it was almost impossible to conduct successful competitions. The Department of Agriculture assisted in financing the prize money by giving grants not to exceed \$25 per competition. The following is the list of competitions held in 1926:

County	Name of Organization Conducting Competition	No. of Competitors	Amount of Prize Money Paid	
Carleton	Teeswater, Walkerton, Port Elgin and Chesley. Carleton Junior Farmers. Dufferin County Plowmen's Association. Grenville Juniors' Competition. Halton Plowmen's Association. Hastings Junior Farmers. Manitoulin Plowing Competition. Komoka Plowmen's Association. Peterborough Junior Farmers Association Prince Edward Junior Farmers. Junior Farmers' Association. Elmira Junior Farmers' Association. Totals—12.		\$128 00 15 00 39 00 9 00 60 00 50 00 101 00 268 00 50 00 67 50 52 85 50 00 \$890 35	\$25 00 7 50 19 50 4 50 25 00 25 00 25 00 25 00 25 00 25 00 25 00 25 00 25 00

PROFIT COMPETITIONS

These competitions are conducted for the purpose of encouraging junior farmers to keep cost records of various crops and from an analysis of these to determine the comparative value and cost of production of these crops. In addition to this the winners of these competitions are given a prize of a two weeks' short course at either Guelph or Kemptville. During 1926 competitions were conducted as follows:

			No. of Competitions	No. of Contestants
66 66 66 66 66 66	" " " "	ns with Oats. "Potatoes. "Silage. "Turnips. "Barley. "Wheat.	10 4 2 1 1 2 4 8 7 1 1	42 23 6 4 5 10 14 29 26 4 5
	Total		42	184

ACRE PROFIT COMPETITIONS

Prizes were awarded to competitors showing the highest net profit per acre. In order to have uniformity in calculating the cost of production and profit the following values were used:

1. Man and Horse Labour:

Man labour to be reckoned at 25c. per hour. Horse " " " 15c. " "

2. Fertilizer:

Barnyard manure applied to this crop at \$1.00 per ton or two-horse load.
" " to previous crop at 50c. per ton or two-horse load.

Commercial fertilizer applied to this crop at two-thirds of cost price, additional commercial fertilizer applied to previous crop at one-third of this year's cost price.

3. Rent of Land:

To be computed on the basis of eight per cent. of the selling value of the land, this to be figured by the Representative and the Junior Farmers' Associations.

Value Seed Used in Planti	ng:			Value	e I	rodu-	ct	Harvest	ed:

Middlesex— S. L. Shackelton, Mossley, No. 1 Wentworth—	14 18	8,955	3.16	297.16	99 06	8,857.84	19 93	104 81
Roy G. Leeming, Glanford Station		13,936.2	3.5	495.2	170 99	13,441.0	30 90	163 49

Feed values for this competition were the same as those used for the baby beef competition.

Butter fat was valued as follows:

March		AugustSeptember	
May	$.34\frac{1}{2}$	October	.33
JuneJuly		November Value skim milk at 23 cents	

The prize was awarded in each case to the competitor showing the largest net profit.

COUNTY STOCK JUDGING COMPETITIONS

During 1926 there were twenty-seven counties conducting county stock judging competitions. These contests were usually held previous to the intercounty events and thus provided good preliminary training. There was a total of 949 competitors or an average of thirty-five per contest. The following table gives details of the competitions by counties:

County	No. of Competitors	Prize Money
Bruce	57	Trophies.
Carleton	47	\$90 00
Dundas	14	28 00
Durham	35	
Elgin	45	40 00
Frontenac	40	49 75
Grey	90	Silver Cups.
Haldimand	19	Free trip to Royal and Guelph
		Winter Fairs.

N. Simcoe	9	
S. Simcoe	61	
Timiskaming		Cups.
Victoria	22	\$81 75
Waterloo	50	177 50
Wentworth		
York	50	174 00

Inter-County Judging Competitions

In 1926, inter-county live stock judging competitions were held as usual at the Royal, Guelph and Ottawa Winter Fairs. Teams of three Junior Farmers, under twenty-six years of age, were trained by the county representatives. At the Royal the competition was open to any county in Ontario; Guelph was open to counties west of and including Victoria and Durham, and the Ottawa contest was confined to counties east of this.

The winning teams this year were as follows:

Royal Winter Fair—York County.

Members of Team—Donald Petch, Newmarket.
Fraser Gee, Gormley.
Clarence Graham, Maple.
Coach—R. J. Rogers.

Guelph Winter Fair—Wellington County.

Members of Team—Earl Howse, Arriss, No. 1.

Howard Barbour, Hillsburg, No. 1.

Irwin Kopas, Elora, No. 3.

Coach-R. H. Clemens.

Ottawa Winter Fair—Carleton County.

Members of Team—Ernest Caldwell.

Wilson Gourlay.

Harold Nesbitt.

Coach—C. M. Meek.

Following are the county standings and scores at the Royal, Guelph and Ottawa Fairs:

PROVINCIAL CHAMPIONSHIP JUDGING COMPETITION

There was very keen rivalry in the eleventh competition between the teams of three boys winning in the east at the Ottawa Winter Fair and in the west at the Guelph Winter Fair, because Wellington and Carleton have each won three trophies in their respective districts and this was the second time teams from these counties had met in competition for the championship of the Province. Carelton County won by a margin of seventy-four points out of a possible 3,000, and this constitutes their second victory over Wellington County.

Excellent stock was provided by York County farmers as follows:

BEEF CATTLE:	Shorthorns	T. A. Russell, Weston.
	Finished Beef	Col. F. H. Deacon, Unionville.
DAIRY CATTLE:	Holsteins	Watson Brothers, Woodbridge.
	Jerseys	Baggs Brothers.
Horses:		Dominion Transport, Toronto.
		Don Alda Farm, Todmorden.
SHEEP:	Leicesters	Wm. Clarkson, Weston.
	Hampshire	L. E. Morgan, Milliken.
SWINE:		C. D. Boynton, Dollar.
		W. G. Rennie, Agincourt.

The judges were: Prof. W. J. Bell, of the Agricultural School, and Prof. Wade Toole, of the Agricultural College, Guelph.

The party were entertained at luncheon by Don Alda Farms, and at a dinner tendered by the donors of the trophy, the Union Stock Yards Company and the Ontario Packers, at which function the trophy was presented to the winning team by the general manager of the Union Stock Yards Company, who also presented each boy with a souvenir button of the event.

Individual Judging Competitions at Exhibitions

At the larger exhibitions individual judging contests are held for Junior Farmers and Junior Institute members. These competitions are growing from year to year as the rural young people are taking a keener interest in them. The following table gives the number of contestants and the amount and division of prize money in the various classes at the shows:

Name and Date	Classes	No. of Prizes	Range of Prizes	Total Offered	Total Contest- ants
Canadian National Exhibition, September 8 and 9.	Heavy Horses	16 16 16 16	\$20—\$5 00 20— 5 00 20— 5 00 20— 5 00 20— 5 00	\$200 00 200 00 200 00 200 00 200 00	56 78 91 36 70

Total prize money offered at fairs.....\$2,209 50

At the conclusion of the judging competitions on Wednesday, September 9th, 1926, at the Canadian National Exhibition, the Junior Farmers paraded under county banners, led by a bag-pipe band, from the Coliseum to the domestic science judging hall where the Junior Institute girl judges joined the parade. The party of about 600 was led by officials of the Department of Agriculture and Directors of the Canadian National Exhibition in a parade around the grounds to a dining hall where all were guests of the Exhibition at a dinner. In the evening all the contestants and judges were entertained by the officials of the Canadian National Exhibition at the evening performance in a specially reserved section of the grand stand.

The Geo. Urban, Jr., Special of \$100 was provided by Mr. Urban, a prominent citizen of Buffalo, and a strong admirer of the Canadian National Exhibition, for the encouragement of the boys' competitions. It was decided to award the money as part of the judging competition conducted by the Department of Agriculture. The sum of \$10 was paid to each of the ten boys standing highest who had never previously attended the Canadian National Exhibition. This was of course in addition to the prizes awarded at the time by the Canadian National Exhibition. It was found that of a total of 429 boys who competed in the different classes, there were forty-eight who had never previously been at the Canadian National.

Girls' Household Science Judging Competition at the Canadian National Exhibition

The third annual Household Science Judging Competition for girls was held at the Canadian National Exhibition on September 9th, 1926. The Board of Directors donated a handsome trophy for the highest county team of three girls and also provided \$440 prize money for individual competition. In the intercounty contest there were twenty-one teams entered and in the open competition 166 girls took part. In the counties the girls' teams were trained and coached by the staff of the Women's Institutes Branch co-operating with the county representatives. In most of the counties elimination contests were held and in this way many girls received excellent training. This year the winning team came from Haldimand County and the members of the team were as follows:

Elga Lint, R.R. No. 3, Cayuga. Frances Fearman, R.R. No. 3, Caledonia. Bessie Elder, Cayuga.

Month's Courses in Agriculture and Home Economics

Since 1912, this department has conducted short courses in agriculture and home economics. During 1926 there were 41 one-month courses in agriculture with a total enrollment of 1,362 students or an average of 24 pupils per course. There were 71 two-weeks' courses in home economics with a total enrollment of 2,816 girls or an average of 28 per course. In Northern Ontario there were 7 two-weeks' courses in agriculture with an enrollment of 310 pupils or an average of 38 per course. In home economics there were 5 courses with 146 students on the roll or an average attendance of 24 per course.

Courses in home economics included a study of foods, cooking, sewing, millinery and home nursing and first aid. These classes in home economics were conducted at the same time as the course in agriculture for boys. By running these classes concurrently it makes for increased attendance and promotes community development.

Three-Months' Courses in Agriculture and Home Economics Three-months' schools were held in the following counties:

	,	Agrie	culture	Home Economics		
County	Where Held	No. on Roll	Average Attendance	No. on Roll	Average Attendance	
Bruce Luc Haldimand Cal Hastings Stir Huron For Lambton Ma Wentworth Sto Wellington Dra	edonialingdwichndauminney Creek	25 67 75 28 72 44 49	19 36 35 14 21 27 25	38 94 130 32 38 68 60	27 57 60 15 18 47 34	
Totals for 7 Courses Average per Course		360 51	177 25	160 65	258 37	

These courses are very popular in some of the counties as they give the pupils an opportunity of making a more thorough study of the sciences taught. The local people arrange for halls, heating and other expenses in connection with the course and special lecturers for the course are provided by the department. In these courses more time is given to a study of such subjects as English and mathematics. These courses are a big factor in community development.

SHEEP AND SWINE MARKETING COURSES

The Sheep and Swine Division of the Federal Department of Agriculture co-operated with the county representatives in organizing and conducting special sheep and swine marketing courses in conjunction with the regular short courses in each county. All these courses were very well attended and proved to be interesting and helpful to both old and young.

The Industrial and Development Council of Canadian Meat Packers, the Federal and Provincial Live Stock Branches, the Canadian Swine Breeders' Association and the county representatives conducted swine judging and marketing courses at the packing plants as follows:

Place	Date	Counties Included	Attendance
Toronto (East)		Hastings, Prince Edward, Northumberland, Peterboro, Victoria, Durham, Ontario,	
Toronto (West)	Dec. 16, 17, 18	York, Peel, Halton, Dufferin	
Ingersoll, Ingersoll Packing		Essex, Kent, Elgin, Lambton, Middlesex,	0+
Peterborough, Canadian Packing		Oxford, Brant, Norfolk, Perth, Waterloo	60
		Renfrew, Carleton, Lanark, Leeds, Prescott and Russell, Glengarry, Dundas, Gren- ville, Frontenac, Lennox and Addington	31

THE ANNUAL CONFERENCE

The Nineteenth Annual Conference of Agricultural Representatives was held at the Ontario Agricultural College, Guelph, on July 5th-8th. This convention each year proves an interesting clearing house of ideas. It offers an opportunity for the men from fifty county offices to study methods which have been found successful and to present their more difficult problems for united consideration. The members were particularly inspired by addresses by Mr. A. B. Graham, in charge of co-operative extension work at Washington.

ZONE CONFERENCES

It has been found advisable to hold district meetings of agricultural representatives to discuss particular zone problems and conferences of this kind were held as follows: Kemptville, October 5th; Hamilton, October 11th; Arthur, October 13th; Ridgetown, October 15th; Port Hope, October 18th; Chatham (Special Tobacco), March 31st; London (Special Corn Borer), January 3rd, October 9th. In addition, numerous committee meetings were held dealing with special problems and phases of the work.

HOME DEMONSTRATION WORK, PEEL COUNTY

The people of Peel County have increased their demands upon the services of the home demonstrator as indicated by the following comparison which shows an increase in every item:

	1925	1926
Office Callers	695	977
Telephone Calls (Incoming)	1,100	1,200
Letters Received (Approximate)	957	1,300
Letters Sent	930	983
Circular Letters Sent	753	1,952
Bulletins Given Out	580	1,084
Meetings Addressed	96	127
Attendance	4,953	5,172
Special Short Courses	4	13
Schools Visited	7	10
Rural Homes Visited	96	156
Newspaper Articles	8	11
New Organizations Formed	1	6
Half Days in Office	269	284
Miles Travelled by Car	4,000	6,123

SHORT COURSES

A five-weeks' course in home economics at Caledon East was attended by a total of 110 girls and young women with an average daily attendance of sixty-five. Special nutrition schools were held as follows, instruction being given by the home demonstrator:

Place	Auspices	Dates	Registration	Average Attendance
Brampton	Junior Institute	Mar. 1-Apr. 26 Apr. 20-22 Apr. 25-28 June 10-Nov. 3 Oct. 12 July 16-Dec. 3	15 13 8 30 32 36	11 14 10 8 27 32 32 19

OTHER SHORT COURSES

Place	Date	Course	Instructor	Registration	Average Attendance
BramptonPort CreditStreetsvilleStreetsvilleStreetsville	NovDec February March	Nursing Basketry Basketry Manual Train-	Dr. Thompson. Mrs. Bruce	10 10	12 10 9 45

SENIOR WOMEN'S INSTITUTES

After serving eight years as district secretary of the Peel Women's Institutes, the home demonstrator resigned in June in order to devote more time to the requests of other organizations and give more attention to other phases of work. During the period of this secretaryship the Peel Women's Institutes have made remarkable progress as may be seen by a comparison of statistics for the year 1917-18 with 1925-26:

	Regular Meetings	Special Patriotic Meetings	Total Attendance	Papers and Addresses	Members	Receipts
1925-26. 1917-18.	232 129	0 68	6,236 3,046	286 114	969 471	\$3,722 87 3,052 72
Increase	103		3,190	172	498	\$670 15

This advance has been attained in spite of the fact that in 1917-18 patriotic zeal was at high tension and that since that time active Junior Institutes have been organized in many parts of the county.

JUNIOR INSTITUTES

The following table will suggest the strength of these organizations:

			,		
Group	Membership	Meetings	Attendance	Receipts	Expenditures
County Brampton Bolton Caledon Cheltenham Caledon East Clarkson Codix Streetsville Tullamore Total	affiliated) 41 29 15 15 20 20	3 4 (exec.) 16 7 6 14 4 5 4 9 4	215 45 420 396 170 220 256 100 60 156 90	\$293 00 427 96 72 46 159 16 46 83 34 88 62 80 12 69 105 92 12 50 \$1,228 20	\$273 99 346 64 27 99 140 42 11 45 17 01 44 02 12 69 88 58 \$962 79

Some idea of the work undertaken by branch units is suggested by a summary of the activities of one unit:

Brampton—Adopted two little girls for clothing, education and health supervision; each needy family at Christmas supplied with bread, milk and meat tickets and baskets of apples; lamps for Peel Memorial Hospital; gifts to the Victorian Order Nurse for her work; play (given eight times in county by this group); courses in basketry and nutrition; public speaking; debating; athletics; canning demonstration; members in garden and poultry clubs; school fair prizes and booth; gifts to Children's Shelter; booth at school fair.

A girls' garden club proved an interesting new feature which was introduced this year as a means of encouraging better kitchen gardens and a wider use of fresh and home-canned vegetables, as well as providing a useful project for members. Eighteen kinds of vegetables of the most approved varieties were chosen and a choice was allowed between hand and horse cultivation. Each contestant was supplied with a pamphlet of suggestions on planting, cultivation and canning and each agreed to exhibit at a local fair. Prizes were awarded on a basis of 80 per cent. for garden and 20 per cent. for exhibit of canned vegetables from it.

"Twenty-six gardens were judged in July; one received a score of 99.0 per cent., and the average was high. Every member was interested. New or previously little known vegetables were added to the menus partially as a result of our study of nutrition at the special three-day courses held during the late winter and early spring. A canning demonstration attended by thirty-two girls was given on July 13th. Much home canning was done and excellent exhibits made at fall fairs both in the special and open classes. One girl sold \$6 of fresh vegetables from her garden. One member gave an address at the Central Ontario Women's Institute Convention on the Garden Club and another a similar one at the Junior Institute Conference at Guelph."

KEMPTVILLE AGRICULTURAL SCHOOL

The Kemptville Agricultural School has had another successful year. The attendance of students, the interest in our farming practices by the farmers of Eastern Ontario, and the yields from our fields, orchard, live stock, poultry and apiary departments, have all been a source of satisfaction.

The attendance in the regular classes, was as follows:

Agriculture	43 students
	10 Students
Domestic Science	16 "

The short courses and attendances were as follows:

Agriculture	33 students
Agriculture	33 Students
The short Common Common in Assistant	E 4 66
Teachers' Summer Course in Agriculture	54

The school was again the centre for conferences and conventions, the following having been entertained during the past year:

	er in Attendance
Boys' and Girls' 3-day Conference (co-operating with Women's	
Institute and Agricultural Representative Branch)	135
Junior Farmers' Field Day	4,000
Eastern Ontario Rural Trustees' and Ratepayers' Association	125
Eastern Ontario Dairy Instructors and Dairymen's Association	110
Grenville County Teachers' Convention	114
Eastern Ontario Bankers' Conference	95
Ottawa Branch, Ontario Vegetable Growers' Association	50
Canadian Society of Technical Agriculturists	90
Eastern Ontario Alumni Association of Queen's University	28
District Meeting of Women's Institute	80
Agricultural Representatives' Conference for Grenville County	65
Ramsayville Presbyterian Church Picnic	35
Inspection Silo Filling with Sweet Clover	45
Ex-students' Annual Re-union.	110

In addition to the above, frequent visits were made by small automobile parties of farmers who were shown the different farm departments by the school staff. In all, approximately, sixty-five hundred people visited the institution during the past year.

During the past year, three houses, recently purchased and renovated, were occupied by members of the staff. One more house is necessary for this purpose. As every room in the boys' residence is now occupied, it will be necessary to increase the accommodation for agricultural students at an early date.

LIVE STOCK

The dairy herds on the farm are in a healthy condition, again having passed a clean Federal tubercular test. All young stock are thrifty and contain some promising individuals both in the Holstein and Ayrshire herds. No additions have been made by purchase during the past year. All young bulls found a ready sale. Several females are running in R.O.P. test, and will have creditable yearly records.

The addition to our hog pen will greatly assist in supplying the increased demand for breeding Yorkshires. Revenue from the hog department for the year was one thousand, three hundred and eighty-three dollars and thirty-five cents (\$1,383.35). During the past year, the following were sold at breeding age for breeding purposes: hogs, 5; sows (bred), 17.

During the past winter, two of our litters became very unthrifty shortly after weaning. They were dry in the hair, and had rough and scabby skins. To attempt to improve their condition, fifteen unthrifty pigs were fed cod liver oil. To start the experiment, one teaspoonful per pig, per day, was fed, gradually increasing until each was receiving a tablespoonful per day. In all, five gallons of oil were fed. At the end of the experiment, the pigs were thrifty and clean skinned.

Realizing that the improved condition of the hogs may have been caused, to some extent, by other means, the experiment is being repeated this winter with a similar class of young pigs, with a view to securing more information. It appeared, however, that cod liver oil had considerable value in increasing the thrift in young pigs.

Shropshires did well last year, the crop and quality of lambs being superior to former years. A shearling ram purchased last fall improved the fleece, considerably, of our lambs—compared with those of any previous year.

POULTRY

The poultry plant, at the present time, has housing room for about five hundred hens, and colony-house capacity for two thousand growing chickens. Four hundred and twenty birds completed a year's work under trap-nests. Of these, two-fifths were old hens, and the remainder pullets. The egg records were very good, 42 per cent. of the pullets passing the 200-egg mark. The highest plant record was made by a Barred Rock pullet, which succeeded in producing 287 eggs in 365 days. The average production of the entire plant reached the pleasing total of 168 eggs per bird.

Cockerels to the number of 188 were supplied to farmers at a nominal price. Of these, 133 were sent to breeding stations, and the remaining 55 went to other farmers. Some 200 pullets and 100 yearling hens were sold to farmers as foundation stock. These birds were sold at cost, for the purpose of stock improvement.

Extension work was carried on from time to time as opportunity was presented. This work is handicapped owing to lack of time and press of work on the home department. A number of eggs were supplied for hatching purposes, but the demand far exceeded the supply. There is a keen demand for hatching eggs and breeding stock which cannot be met from a plant of this size.

APIARY

The winter of 1925-26 was one of the worst that beekeepers experienced in this locality for many years. Many beekeepers reported heavy winter losses. Winter set in earlier than usual, and bees were confined to their hives until quite late in the spring. Owing to so much cold wet weather during the dandelion and fruit bloom, little nectar was gathered from these sources.

In the fall of 1925, twenty-seven colonies of bees were put into winter quarters at the school. Two of these colonies died from long confinement, and three others were so weakened that they were united. All other colonies came through in good condition. This gave a spring count of twenty-three colonies of Italian bees. During the past summer this number was increased 74 per cent., making forty colonies in the fall.

Although production was greatly handicapped by bad weather and the making of increase, yet two thousand, six hundred and eighty (2,680) pounds of extracted honey and eighty-one (81) pounds of comb honey were harvested, making an average of one hundred and twenty (120) pounds per colony, spring count.

Outdoor wintering in quadruple cases is practised. Standard ten-frame Langstroth hives are used.

This department has a reversible four-frame extractor and other necessary equipment for successfully demonstrating modern beekeeping practices to the students. Owing to the large number of black and hybrid bees in the vicinity, queen rearing has not been practised.

Horticulture

Further progress has been made in developing the horticultural department of the school during the past year. The past season was a difficult one in which to grow the variety of crops required, with the limited facilities available. Under average conditions, these difficulties would not have been so pronounced. A late spring necessitated keeping a quantity of material in the small greenhouse for several weeks longer than usual; the weather was too severe to permit the use of a number of frames generally filled at this season with garden material. Further damage was caused by several unusually severe late frosts. was experienced by many growers of early garden crops in the district. siderably more than half the cabbage and cauliflower plants that had been transplanted from cold frames to the garden early in June were killed by a frost. Beet and carrot seed sown about the middle of May proved a total loss, and had to be resown in June. Despite these setbacks, a quantity of material was grown and stored for the needs of the school dining-room during the summer and winter courses. Approximately one thousand (1,000) tins of sweet corn and tomatoes were canned in the small "home-canning" plant installed two years previously. Early frosts in September brought to a close one of the shortest growing seasons experienced in this district for many years.

This disheartening experience of many of the smaller market garden growers, has emphasized the necessity of providing more adequate means for the growing of market garden crops under possible adverse conditions. It has resulted in increased activity in building greenhouses, pits and frames, with a consequent permanent benefit to the market-garden business.

The area available for growing garden crops had become congested, due to the increased planting of small fruits. This difficulty has been overcome during the past season by the acquisition of a suitable area of approximately two acres, that will now permit the culture of several crops on soil more suited to their needs.

The school orchard, consisting of more than twelve hundred young trees, came through the winter in good condition. Sweet clover had been sown the previous August as a cover crop. It made considerable growth before winter set in, and, owing to conditions experienced in the spring, it had grown to a height of eight to ten inches before it was possible to plough it down. This method of culture produced considerable vigour and growth in the trees, but might prove disastrous if repeated the following year. One of the main objects, if not the chief factor, to be obtained in growing a young orchard in Eastern Ontario is that of maturing the season's growth before severely cold weather is

experienced. If the young trees are grown in sod, maturity of growth occurs naturally, but often at the expense of the size of the trees; the difficulty, therefore, arises in practicing a method of culture that will produce reasonable growth with the desired maturity.

The crop consisted almost entirely of the early varieties, Duchess and Wealthy. There were no McIntosh or Fameuse, and only half the Milwaukee obtained the year previous. The Wealthy, however, were so heavily laden that a considerable proportion of the crop was removed in July. The quality was most satisfactory, and this result was largely due to the purchase of a small type of power sprayer that gave entire satisfaction throughout the season. By the use of this small power sprayer, the time required to spray the orchard was less than half that formerly needed when the work was done by means of a hand pump; the work, moreover, was done more thoroughly, and with considerable saving of material.

During the summer season, several horticultural societies visited the institution, amongst them the Ottawa Vegetable Growers' Association, and favourable comments were made by a number of those visiting on each occasion, with suggestions for future work, that were appreciated.

A number of meetings were attended during the year, and lectures were given on horticultural subjects in general. Assistance was rendered in the planning and planting of several farm homes, and it is earnestly hoped that in the near future assistance may be available to materially extend this very important phase of agricultural community and home development.

In a previous report of this department, it was stated that a considerable amount of grading and filling had yet to be done around several of the school buildings; the heaviest portion of this work has been completed, though a certain amount of sodding has yet to be done on the slopes and terraces around the main building. The trees and shrubbery around the grounds have made satisfactory growth, and a collection of this material is gradually being added to from year to year.

FIELD HUSBANDRY

Crops on the Kemptville Agricultural School Farm in 1926 were generally satisfactory, and, for the most part, were harvested in good condition. Substantiation was again given to previous findings in three important respects, viz., that barley is a safer and more profitable crop to grow as a source of grain for hogs and cattle than oats; that alfalfa of the proper strain can withstand the Eastern Ontario climate and provide good yields of cheap and nutritious roughage; and that sweet clover as a source of pasture and silage has no equal in Eastern Ontario. It is gratifying to note that these facts are becoming more clearly recognized by the farmers in this portion of the Province, and noticeable increases in the above crops have taken place.

The modified three-year rotation, as practiced on the farm, is also showing results in the direction of greater fertility in the land and in the control of weeds. Relative to the building up of fertility, the yields of hay and grain for 1926 are as follows:

Alfalfa Hay (established fields)	3.07 tons per acre.
Barley	48 bushels per acre.
Banner Oats	77 " "

These yields, while not exceptionally high, are certainly better than could be secured early in the history of the farm, and indicate that the land is becoming more fertile.

Relative to weed control on the farm, the fact that we are able, with comparative ease, to produce grain of sufficient cleanliness and purity to be eligible for registration, suggests that this difficult problem is being met satisfactorily.

Yields of other crops were also satisfactory, with the exception of turnips which were badly damaged by the green aphis. Sweet clover silage yielded slightly over nine and one-half tons per acre, and was produced for less than two dollars (\$2) per ton.

Fertilizer tests in co-operation with agricultural representatives were conducted in Leeds and Renfrew Counties respectively, and, in most cases, emphasized the need for phosphates.

The seed-cleaning plant continues to be patronized by farmers in the area surrounding Kemptville, being teamed or shipped in frequently from fifty mile radius. Following is a summary of the work accomplished:

Sweet Clover Scarified and Graded	61½ tons.
Timothy and Clover other than Sweet Clover	1,843 bushels.
Cereals	
Number of farmers making use of plant	290

The need for greater space is acute, and it is felt that an up-to-date, conveniently-arranged plant would serve as a demonstration for other centres in this important work.

A considerable amount of time was spent in assisting with the Better Seed Train; serving as director of the Ottawa Winter Fair in charge of the Seed Department, and as director of the Canadian Seed Growers' Association, as well as aiding agricultural representatives whenever called upon.

AGRICULTURAL DEVELOPMENT BOARD

During the past year there has been a further increase in the work of this Board in loaning money to farmers on first mortgages, as the following comparative statement will show:

	Number of Applications Passed	Amount of Loans Passed	Value of Security	Number of Loans Paid Out	Amount Paid Out
1922	990 892	\$2,040,605 00 3,729,350 00 3,582,150 00 3,246,680 00 4,028,300 00	8,685,166 00 7,871,026 25	776 819 701	\$1,188,000 00 3,000,000 00 3,200,000 00 2,700,000 00 3,200,000 00
	4,412	\$16,627,085 00	\$37,535,804 82	3,461	\$13,288,000 00

No doubt this increase was partially due to the action of the Government in reducing the rate of interest during the previous year from $6\frac{1}{2}$ per cent. to $5\frac{1}{2}$ per cent.

The experience of the past year in the matter of repayments has also been satisfactory. The following table gives the situation in this regard:

Due Date	Amount Due	Amount Uncollected	Percentage Uncollected
December 1st, 1924	278,982 77 380,075 20	\$4,554 85 3,700 43 23,729 97 54,347 22	1.59% 1.33% 6.24% 14.81%

It will be noticed that the large amount outstanding has been due for less than six months. For all outstanding amounts there is apparently good security.

During the year through process of law, twenty-one farms came into the possession of the Board. With the four on hand at the beginning of the fiscal year this made a total of twenty-five. At the end of the fiscal year all these properties had been sold except three. No losses were incurred on the sales. This record is even slightly better than the record of the previous year.

In regard to Short Term Loans, the existing associations carried on business during the year, but no new associations were formed. Repayments were made to the extent of \$48,517.39 and new loans granted to the extent of \$24,713.10. This leaves a total amount outstanding of \$175,940.08. While this amount of capital is outstanding the payments of interest have been well kept up, the arrears amounting only to \$802.59.

Since its inception the Board has been turning over to the Treasury Department each year the revenues received from inspection and legal fees. The revenue from the 1 per cent. interest accruing to the Board has, however, been allowed to accumulate owing to the system of financing. During the past year the Board paid over to the treasurer a cheque for \$100,000 from this fund. There still remains a surplus amount of \$179,832.22. This includes an operating surplus of \$57,032.90, which was shown on the operations for the past year.

WESTERN ONTARIO EXPERIMENTAL FARM

The season of 1926 was most peculiar; the growing season, proper, was very dry and most of the harvest season was extremely wet. The rainfall throughout the growing season came in many small showers with the consequent loss through evaporation.

Rainfall by months:

April	3.14	inche	s-8	showers
May	.91		5	"
June		"	9	"
July		"	4	"
August		"		
September				
October		"		

SEED SUPPLY

The farm has become definitely established as a centre for the distribution of high-grade seed wheat, oats, barley and beans. All beans grown are sold for seed purposes only and the demand is so insistent that arrangements have been made whereby for two seasons beans grown by neighbours from seed secured from the farm have been disposed of. The strain distributed has proved itself superior in yielding qualities, requiring a season of only four to five days longer to mature than many of the old strains. This past season, owing to a heavier vine, they have withstood the wet weather exceptionally well and better than other beans.

The demand for seed oats and barley is very great. The demand for seed wheat is on the increase. All wheat raised is sold for seed and many inquiries have to be directed to growers located nearby where farms are reasonably clean and the varieties satisfactory.

The Soy Beans can annually be sold for seed. Four acres only are grown.

The farm has not encouraged the growing of Soy Beans except for hay purposes. The danger of the beans becoming part of the hog ration is altogether too probable and the damage will be almost irreparable except over a long period of time.

We are far better able to do without the Soy Bean than we are to face a quality problem in our pork.

LIVE STOCK

The health of the stock could not be better. There has been no disease among the swine or poultry during the year.

The trouble at farrowing time experienced throughout the Province resulted in a very low average in the spring litters. Some difficulty was prevalent during the fall, and three Yorks sows were disposed of and replaced by young ones.

The handling of three breeds of pure-bred swine on a small institution is difficult and, if all are kept up to standard, is costly.

The demand for breeding stock is very satisfactory—the supply is much too small for the demand.

Under the particular conditions in southwestern Ontario, it would be advisable to cater more to demands for breeding stock in swine so that a greater influence could be exerted over the type of hogs kept.

The low set, fine bone, chunky hog is gradually disappearing but the process is slow; the distribution of rangier sows and boars conforming more nearly to the proper bacon type would be of great assistance and would be acceptable to the people generally.

The cost of production is the greatest problem with many. Some work will be commenced in the spring of 1927 to further counteract the all too prevalent idea that the old type of a thick smooth is the cheaper producer.

PERMANENT IMPROVEMENTS

The greenhouse, 100 feet by 30 feet, was completed during the year. A partition has been added in order to permit the production of a commercial crop in addition to flowers, etc.

The crops growing are tomatoes, lettuce, radishes, spinach and flowers.

The students from the Agricultural School use the house for practical work.

Visitors are frequent to the greenhouse and include both professional and amateur growers interested in flowers and vegetables growing under glass.

VEGETABLE GARDENING

A garden site was selected and laid out in two equal and similar divisions, each containing one acre, with suitable roadways provided. This garden was used during the 1926 season for the growing of experimental and commercial vegetable crops.

It is planned to work out a long-time demonstration on the maintenance of soil fertility in vegetable-growing lands. The two sections of the garden will be used, the one acre receiving barnyard manure in its treatment while the other acre depends alone upon green maturing crops and commercial fertilizer applications for its supply of added plant food.

FRUIT GROWING

A—Apples—Realizing the need for the testing and demonstrating of some of the newer and more promising varieties of apples suited to southern Ontario conditions, a variety apple orchard was set out in the spring of the past season. This orchard will also prove of great value in connection with the courses in horticulture taught at the Vocational Agricultural School.

The following varieties and numbers of trees of each were used. The orchard is set out on the hexagonal plan, allowing forty feet between each tree.

Row	No. of Trees	Name	Remarks				
1	10	Red Spy	From Ge	neva Exper	imer	ntal St	ation

NOTE.—Despite an adverse season the trees made a good start and show good growth. Some few replacements will be necessary, however, due to accidental and pest damage done the trees.

B—Small Fruits:

Raspberries—Stock of the following varieties was secured in a small quantity of each and from a reliable disease-free, government-inspected nursery.

Cuthbert—Herbert—Brighton—Count

A further planting of 500 suckers was made of Viking, the promising new variety produced at the H.E.S., Vineland. This latter stock on increasing, and if judged suitable for the district, will be distributed amongst good growers.

The stand of plants resulting from the Cuthbert, Herbert, Brighton and Count varieties planted was poor, owing to the bad condition in which the plants arrived and the hot dry weather following planting.

Strawberries—A small nursery was started, using the following varieties of strawberries:

Cassandra—Portia—Glen Mary—Senator Dunlop—Premier and Parsons Beauty

It is planned to establish beds of these varieties suitable for demonstration purposes and for use in conjunction with the school courses in horticulture.

NUT CULTURE

Walnuts of the varieties known as Chinese and Carpathian were planted and a considerable number of young trees are now growing in the nursery plot. It is planned to use these trees for propagation purposes in producing and in trying out various kinds of walnuts considered possible for growing in southern Ontario.

ORNAMENTAL PLANTINGS AND DEVELOPMENTS

Rose Beds—Two new rose beds were set out this year and the following varieties were added to those previously planted:

America Col. Fitzgerald Los Angeles Louise Crette Madame Butterfly Geo. C. Ward F. L. Izzard F. W. Dunlop The General Lady Pirrie
Hoosier Beauty
Mrs. H. Morse
Prince of Wales
Earl Haig
Souvenir de Claudius
Pernet
Elsie Becwith
Betty

Columbia
Glory of Steinfurth
Mrs. W. C. Miller
K. of K.
Ophelia
Madame Jules Bouche
Golden Emblem
Hugh Dickson

I. B. Clark

Lawns—One new lawn was laid down this season and the land drained, piped and graded for the planting of another section next season. General improvement work was undertaken as opportunity permitted in grading and improving the grounds surrounding the farm buildings.

EXTENSION WORK

Agricultural meetings and courses were attended whenever necessary.

A large number of committee meetings were attended in connection with seed, live stock, agricultural representatives, corn borer and agricultural school activities.

THE CORN BORER

Undoubtedly, the Corn Borer is here to remain indefinitely. The area of real damage is rapidly extending. Methods of combat will necessarily be severe. Intelligent production may be a possibility—the use of catch crops, various dates of planting and varieties of corn all have to be carefully considered before it can be admitted that we have to abandon the corn crop.

Every assistance possible is being offered to the authorities in the clean-up campaign.

AGRICULTURAL SCHOOL

The school commenced in 1925 was finally completed in November, 1926. The experiment in agricultural education shows very definite indications of being particularly successful.

Considerable time was given to assist the Vocational and High School Boards in this work.

The selection of the principal became a real problem; first, to locate a suitable man and, second, to find the money to pay such a man. However, both difficulties were overcome and Norman Davies, B.A., was engaged. Mr. Davies had taken the teacher's courses at Guelph and taught agriculture at summer schools, and was an enthusiast in agricultural teaching. Oliver Cameron, B.S.A., was selected as regular agricultural teacher, and the balance of the work is taken by F. W. Presant, B.S.A.

A class of twenty-two are in regular attendance taking an agricultural course which is outlined and will take three or four years to cover.

The community hall is filling a real need around the school.

The whole-hearted, unanimous, and in some cases the enthusiastic support given by the people to the entire undertaking is one of the most gratifying and most promising features pointing to a successful conclusion of the venture.

Mr. Presant, of the farm staff, is undertaking the instructional work in vegetable growing, floriculture and landscape gardening in the Agricultural School.

THE PENINSULAR WINTER FAIR

The third Winter Fair was a success. An effort was made to secure new quarters but without immediate results. The original idea was to ascertain if the people really wanted a fair in this part of the Province; their attendance at three successive shows held under most unfavourable conditions was ample proof. Failing new quarters, the Board decided to put on another show in December, 1926, and unless public opinion was sufficiently strong to influence the various councils and governments that permanent quarters were necessary, the show was to be abandoned.

PLANT DISEASE WORK IN THE RIDGETOWN DISTRICT, 1926

The early part of the summer was very dry and very few diseases developed in the early crops. The latter part of the summer, however, was very wet and diseases became more troublesome especially in such crops as celery and late potatoes. A number of experiments for the control of plant diseases were carried on, some on the Experimental Farm and others in different places in Essex and Kent Counties.

Stinking Smut (bunt) of Wheat has become very troublesome in this district during the past few years, so in September, 1925, six different substances were used in treating wheat that was badly affected with smut. Some of these substances were used as dust and some in solution. The treated grain was then sown in plots, in duplicate, each 1/100 acre, and a seventh plot was sown as a check, no treatment given to the wheat. In two of the plots there was no smut, in two there was only a trace, in one there was 1.5 per cent., whereas in the check plot there was 9.2 per cent. smut.

An experiment for the control of oat smut much similar to that of 1925 was carried on. Oats were treated with ten different substances, some as dust and some in solution. The treated oats were sown in plots each 1/100 acre, in duplicate. In the plots where the oats were given the formalin spray (dry Formaldehyde treatment) there was only a slight trace of smut. In the other plots the amount of smut ranged from 3.1 per cent. to 8.5 per cent. and in the check plots (no treatment) there was 10.8 per cent. smut.

The work in beans for the control of anthracnose and mosaic was continued. The seed sown was from 1925 crop which had been rouged for mosaic during the growing season and hand picked for anthracnose after harvesting. Four different strains of seed were sown and in all cases the amount of mosaic and anthracnose was less than during the previous year, but owing to the unfavourable season for the bean crop and the damage done during the early part of the season by the seed corn maggot, results cannot be compared with other years.

During unfavourable seasons celery blight causes a great loss in the crops. Two experiments were started for the purpose of comparing dusting with liquid Bordeaux as a means of control. One of these experiments was on the Experimental Farm and the other with one of the celery growers in the district. The weather was very dry and after a number of applications, spraying and dusting were discontinued as there was no appearance of blight either on the sprayed or unsprayed rows. At a later time, however, blight developed very badly in one of the plots and if spraying had been continued some definite results might have been obtained.

Experiments for the control of onion smut were continued in the Pelee onion marshes, three substances being used, viz.: kalimat, semesan and formalin. These substances were used at different strengths except semesan which was used at the rate of one ounce to five gallons water and 100 gallons of solution per acre, giving a yield of 450 bushels per acre. Similar quantities of formalin and kalimat were used at different strengths to see which would give the best results and in all cases formalin gave a higher yield than kalimat. The highest yield was obtained where formalin was used at the rate of one pint to fifteen gallons of water and 150 gallons per acre, the yield being 505 bushels per acre. Whereas in the rows where no treatment was given the average yield was eighty-five bushels per acre.

During the summer an inspection was made of several raspberry plantations in the Counties of Essex, Kent and Lambton for the purpose of ascertaining where raspberry stock could be obtained that would be practically free from such diseases as mosaic and leaf curl. Only one plantation was located that was suitable for this purpose, and this one should be a good source of supply for raspberry stock. The owner's name has been added to the list of those growing certified stock in Ontario.

SEASONAL WORK WITH VEGETABLE CROPS COMPLETED FOR SEASON 1926

CROPS-TOMATOES

Project—To determine the relative returns from different dates of planting tomato seed for an early crop.

EARLY TOMATOES

Plot No. and Date of Planting	Yield per Acre July 14 to 28	Yield per Acre July 29 to Aug. 11	Yield per Acre Aug. 12 to 20	Total Yield per Acre
Plot 1, February 27th	3,362 8 2,524 8		13,075 0 12,225 0	

Plot 1. Plants were of necessity checked to such an extent that the first blossom cluster, which was set in the greenhouse, did not produce much fruit.

The earliest fruit in the field was picked from plot 1, but the first fruit was light in yield and of indifferent quality.

Project—To compare and test the commercial value of several varieties, many of which were new introductions, extensively advertised.

EARLY TOMATOES

Variety			Yield p July 27		Yield p Aug.		Total per		Recom- mended for early use
Earliana (Moore)	1,106 1,050 1,381 862 243	4 0 4 8	lbs. 2,187 1,825 1,900 1,200 1,600 1,775	0 0	lbs. 1,062 1,375 900 1,162 937 1,150	oz. 8 0 0 8 8	lbs. 4,343 4,306 3,850 3,743 3,400 3,168	0 12 0	
Red River (N.D. Agricultural College)	1,068		1,312 1,112	8	700 975	0	3,081 2,825	4 0	2925 proved to be a poor strain of "Can-
June Pink Early Prolific (Beebee) Red Head (M.A.C.) Earliest Producer (M.A.C.) Premier (Vancouver) Moulds' Marvel Santa Rosa (Burbank) Crackerjack (Iowa) Stark's (unnamed) Oxheart Coreless-Livingstone	656 518 687	12 8	43	8 0 0 8 8 	762 637 325 362 400 312 562 368 200 200 162	8 8 0 8 0 8 12 0 0 8	2,787 2,106 2,018 1,850 1,087 981 562 412 200 200 162	12	adian''

Total yield does not always indicate the worth of a variety. Some of the early varieties produce much superior fruit to others. Some bear a large proportion of good fruit during the early season while prices are highest. These are points to consider.

Project—To demonstrate the growing of tomatoes trained to stakes and to test certain varieties for this purpose.

VARIETY TEST OF TOMATOES ON STAKES, 1926

Variety •	Yield per plot	Value of yield per plot	Value of yield per 100 plants	July 17-A	f yield from Aug. 6 per I plants
John Baer	lbs. oz. 130 13 84 12	\$6 02 4 00	\$25 08 16 67	Staked	Flat Culture
College)	110 10 150 11 123 10 129 2 132 7	6 00 7 28 6 19 7 44 7 80	28 09 22 75 19 34 24 00 25 16	\$16 71 18 69	\$13 15 14 40

Project—Further selection of desirable plants and saving of seed therefrom in connection with the improvement of the new early variety known as "Canadian" which was developed at the Ontario Agricultural College.

CROP—CELERY

Project—A number of varieties and types were grown to judge as to their suitability for (a) muck land culture; (b) for use by the market gardener to supply his local demand as existing in southern Ontario; (c) for winter storing purposes.

The green varieties were to be experimented with to test their possibilities for blanching with ethylene gas.

Trade Name of Variety	Seedsman from whom obtained	Remarks
Golden Plume	Garahan (Penn.)	Made best growth of all lots—matured uniformly and early—taller than others of same variety and produced a fairly good compact head with stalks of medium thickness, showing a good heart-foliage, bright, shiny and attractive. A very promising strain.
Golden Plume		Not outstanding in any quality—medium tall and not noticeably early for the variety—a good enough average for the type.
WonderfulAmerican Golden Self-Blanching.	Empire Farms	Remarks similar to Golden Plume (Forbes) Remarks similar to those made on Golden Plume.
Vilmorin's New Strain Paris Golden Paris Golden	Vilmorin- Andrieux (France) Steele-Briggs	Not noticeably taller than Golden Plume types but with a more loose and open head. Not ready to blanch quite as soon as Garahan's Golden Plume, but lost green colourapidly. This season's seed seemed practically free from off-type plants. Noticeably smaller and slower growing than Golden Plume or New Strain types. Stocks are shorter, head more bunched, leaves very much lacinated. Variety not suitable for early celery—not likely to prove as saleable as above-mentioned types when competing against them.
Midgley's Special Golden Self Blanching	Midgley	A strain which appears to do very well and compares with the best Golden Plume strains. It is slightly shorter and has a somewhat more compact head with a good heart—ready for blanching about the same time, and foliage of a good bright attractive colour and condition.
Woodruff's Wonderful	Woodruff	Resembles Midgley's strain in many characteristics, having a more compact solid head, thicker than the ordinary Golden Plume type. For some reason this strain seemed to suffer earlier damage from late blight than did Midgley's.

Continued wet, cold weather during the fall months produced an infection of late blight on the lots of celery for winter storage and artificial blanching purposes, so severe as to make them unfit for experimental work.

CROP—EARLY CABBAGE

Project—An experiment was undertaken in which various forms of inorganic nitrogen fertilizers were compared. In addition to the check plot, two other plots were used. Plot 7 received one application of acid phosphate sixteen per cent. at the rate of 1,000 pounds per acre. Plot 8 received an application of muriate of potash at the rate of 400 pounds per acre. Both applications made on day of planting in field.

The nitrogen was applied at the rate of 175 pounds per acre for nitrate of soda and all forms were used in quantities calculated to supply an equal ammonium content.

The plants used in plots 1-8 and check were all of the variety Golden Acre and were a very uniform lot.

The plants of plots 9-11 were all of the same strain of Jersey Wakefield and equally uniform.

The Golden Acre seed germinated March 4th.

The Jersey Wakefield seed germinated March 3 d.

Both lots were set out into the field May 6th.

VALUE OF VARIOUS FORMS OF INORGANIC NITROGEN FOR EARLY CARRAGE

VALUE OF VARIOUS FORMS OF INORGANIC NITROGEN FOR EARLY CABBAGE								
Plot No.	Fertilizer Applied	Weight heads un- trimmed	Loss in Trim- ming	Weight of Heads Trimmed	Good Market- able Heads		Remarks of June 28th, 1926	
		Lbs.	Lbs.	Lbs.

11	3 applications of NA NO₃	86½	60½	26		••	Heads of only fair average size.	
				ļ <u> </u>				

Plots 1-8 and Check (Golden Acre) harvested June 29th, 1926. Plots 9-11 (Jersey Wakefield) harvested July 6th, 1926.

CROPS—MUSKMELONS

Project—To compare a number of varieties and to learn their commercial value with regar to southern Ontario conditions:

	Approximate	
Name of Melon	date of Maturity	Remarks—Field Notes
Golden Champlain	August 20th	Small to medium size—flat ends—limited netting—greenish yellow ground colour—yellow flesh of fair quality. A good early, yellow-fleshed variety.
Sugar Sweet	August 21st	Small size—round—fair netting green flesh—sweet and of fair quality. A popular early green-fleshed variety.
		A larger melon than Golden Champlain more round in form—rather light in colour of skin, turning to golden shade at maturity—quality and flavour excellent. A good commercial variety.
_		Medium in size—very similar in general characteristics to Sugar Sweet—being a green-fleshed variety.
Extra Early Osage	August 30th	Medium to larger in size—dark green outer colour with fair netting—quality good.
		Round to oval in shape, medium to above in size, dark green outer colour with fairly good netting—with salmon flesh, good flavour; fruits seem to tend to spot on blossom end.
Shumway Giant	September	Large, light coloured melons, 12 inches in diameter, flesh pink, quality coarse and only fair flavour.
Fordhook	Mid September	Small to medium, flattened to round in shape, fairly good netting on dark green ground—salmon flesh, good flavour.
		Medium size, round oval, well netted, attractive and
Irondequoit	September	Medium to above in size—round with flattened ends, light in colour—fair netting but not so attractive as some other sorts.
Princess	September	Above medium in size—globular shape, well netted on a dark green ground, attractive salmon flesh on green rind—flavour only fair.
		Medium to slightly above in size, long oval shape, well netted yellow flesh, good flavour.
New De-elicious	September	Medium in size to slightly above, long oval in shape, well netted, compares closely with Jumbo Pink, but seemed to split more readily.
Hales Best	Latter part of September	Medium in size—roundish oblong—very well netted, attractive—green flesh, excellent flavour.
	October	Small round, very late and poor set of fruit, not desirable for our Ontario climate.
Blenheim Orange Hero of Lockinge Victoria		The seed of these three varieties was obtained from Scotland. The plants grew well, set a fairly good lot of fruit, but appeared to be very susceptible to Bacterial Wilt, and all succumbed before much fruit was ripe. However, the quality of the fruit appeared very good and for late melons the variety, Blenheim Orange, might have some place.

PARSNIPS

Project—To compare some better, old country varieties, with home grown seed from Winnipeg.

During midsummer, the season was dry and the soil in which the crop was growing tended to dry out, checking the growth of the parsnips as evidenced

Variati

by the excessive side-root development and undersize of roots. The comparison, therefore, could not be considered as having given a conclusive test.

Pamariro-Field Votes

variety	Remarks—Field Notes
Dobbie's Selected	Small roots, with a consequently light yield, nothing of an
	outstanding or desirable quality appeared in this lot.
Hollow Crown—Dobbie	Small and inclined to be undersized on the average—some
	good specimens were obtained which showed very desirable
	characters for the variety.
Main Crop—Dobbie	Small roots, but of good general type and more free from side
	roots than either of the other two lots. A promising variety
	if grown under ideal conditions.
Marrowfat—Man. Agr. College.	Large roots—heavy yield—roots grew excessively thick at
	top with abrupt tapering to tip, variety seems to incline
	to roughness and much side-rooting.

LETTUCE

Project—Value of Various Forms of Inorganic Nitrogen for Early Head Lettuce.

Plot	No. fertilizer applications		. of ads	mark	ht of etable ids	mark	. of etable ads	mark	tht of etable ads	weig	lue in ht to heads	sin mark	ht of gle etable ad

Applications made on the basis of 175 pounds NA NO₃ per acre, using ammonia equivalent to determine amounts.

Note.—June 7th—by mistake rows 1 and 2 received an extra heavy application. Row 1—1 pound 12 ounces NA NO $_3$ instead of 8 ounces. Row 2—1 pound 5 ounces NH $_3$ SO $_4$ instead of 6 ounces.

Peas

Project 1—Variety test to determine the value of some old country varieties in comparison with some standard varieties of home-grown seed.

The following varieties from English and Scotch seed houses were grown:

Bedford Champion	Prelude	Kelvedon Wonder
Duplex	Chencelot	Excelsior
Hundredfold	Pioneer	Acquisition

Of the above, Bedford Champion, an early dwarf variety, showed promise after acclimatization.

Excelsior—A later dwarf variety, but a vigourous grower, gave equally

Acquisition (Sutton's)—An early dwarf with spreading habits appeared to be a heavy yielding variety with large pods containing a uniformly large number of good sized peas.

Project 2—To demonstrate the value of seed produced in Northern Ontario against that from ordinary commercial sources. Peas grown during 1925 at Fort William, Ont., and of the varieties Thos. Laxton and Gradus.

Seed of Thos. Laxton and Gradus were secured from a reliable seed merchant and equal plantings made side by side with the two northern-grown lots.

The northern-grown seed germinated more rapidly, gave a very much improved stand and the plants retained their superiority in growth and yield throughout the season.

The two plots of Thos. Laxton were harvested and the pods weighed:

Weight of pods from northern seed, 5 pounds 12 ounces. Weight of pods from stock commercial seed, 1 pound 6 ounces.

The other two lots would have shown a similar result in favour of the northern seed.

SPINACH

Project—To demonstrate the value of seed grown in Northern Ontario over ordinary southern-grown commercial stock.

Variety used—Virginia Savoy.

The northern seed was grown at New Liskeard in the season of 1925. The commercial seed was obtained from Norfolk, Va., where the variety originated. Demonstration plot:

Planted May 6th, 1926—two rows, twenty-four inches apart.

Seed sown with seed drill in unfertilized but well-prepared ground.

Observations—Stand of northern-grown seed more uniform and plants show more vigourous growth. As summer heat came on, not so many plants from northern seed bolted to seed stocks.

Harvest records—Source of seed	Weight of marketable Spinach	Weight of Seeders	Total	
New Liskeard (Northern Ontario)	29 lbs. 13 oz.	2 lbs. 8 oz.	32 lbs. 5 oz.	
Norfolk, Va.	18 " 8 "	3 " 1 "	21 " 9 "	

A further test was made with a fall crop and it further confirmed the spring crop results.

SWEET CORN

Project—To arrive at the dates of maturity of several varieties of sweet corn for use in southern Ontario.

Other work was planned as well with this crop but the severity of the attack of the corn borer forced its abandonment.

Varieties grown	Approximate number of days from planting until first picking could be made	
Berney's Golden Swift	63 days	Valued only as a first early yellow corn.
Early White Cory Early Malcom	73 " 77 "	A good early white corn. A good corn, but matures close to Golden Bantam
Sunshine Sweet (N.D. Agr. College)	78 "	type. A promising yellow corn, much similar to Golden Bantam.
Golden Bantam	81 "	A first-class yellow corn, and a standard amongst growers.
Golden Bantam (N.D. Agr. College Special strain).	81 "	No improvement on good Canadian strains.
Whipples New Yellow Country Queen	85 " 89 "	A good corn of high quality. A Golden Bantam hybrid and of good quality.

EXPERIMENTAL PROJECTS WITH INDOOR CROPS

Experimental work undertaken this year was with only one crop as a major project. The tomato crop offered the only possibility of carrying out needed work along commercial crop lines, owing to the limited space at our disposal as well as to the lack of sufficient quantities of stock plants in flowers.

TOMATO CROP

The tomato crop was planned to be grown for two definite purposes:

- 1. To test seven selected varieties and strains as to their value for planting for fall crop use.
- 2. To enable a study to be made of various factors and methods of culture which have an influence on the amount of marketable fruit obtained from the crop.

The results of the experimental records and other observations made on this crop will be concluded in 1927.

NEW ZEALAND SPINACH

One bench of New Zealand spinach is being grown in order to compare it with lettuce as to its value as a substitute crop for use in relieving lettuce growers, who now find that crop unprofitable during a part of the year, at least.

The results from the spinach crop will not be known until the crop has run on into 1927. So far, yield and returns have been poor and the crop is not doing as well as expected of it.

EXTENSION WORK FOR SUMMER SEASON OF 1926

Nature of Work—1. Conducting of co-operative experimenta in problems of economic interest to southern Ontario growers of horticultural crops.

2. Visiting fruit growers, truck crop growers and greenhouse operators in the Counties of Middlesex, Elgin, Kent and Essex in order to keep in contact with the progress of these branches of horticultural industry, to discuss and to study problems affecting same and where acceptable to offer service and suggestions.

Co-operative Experiments

Tomatoes—Fertilizer experiments similar to those carried out in 1925, were undertaken with early tomatoes. Two large growers of this crop were selected in the Leamington district and the data concerning the experiments appear in the following tables:

Fertilizer test plot conducted at Experimental Farm gardens to determine relative values of various fertilizer mixtures and materials in producing early fruit.

EARLY TOMATOES

Plot No.	Fertilizer Analysis	Yie per p		Value of yield per plot	Value of yield per acre	Value of increase over check per acre	Cost of fertilizer	Return for \$1 spent in fertilizer	Value of late picking per acre
1 2 3 4 5 6 7 8 9 10 11 Che	0-16-0 0-12-4 0-10-4 0-8-4 2-12-4 4-12-0 2-12-0 2-12-2 Superphosphate Raw Rock phosphate Basic phosphate ck—No fertilizer	126 153 143 145 145 162 176 163	oz. 9 8 0 10 5 15 8 7 2 3 1	8 01 6 73 7 96 7 96 9 11	\$540 00 586 00 685 00 662 00 801 00 796 00 796 00 911 00 898 00 855 00 664 00	\$21 00 137 00 9 00 132 00 132 00 247 00 234 00 191 00	\$9 60 12 88 12 08 11 28 16 20 17 80 15 70 15 70 9 19 9 19 5 29	\$1 73 8 45 50 8 40 8 40 26 87 25 46 36 10	\$13 00 16 00 16 00 17 00 26 00 27 00 27 00 32 00 31 00 26 00 34 00

This experiment, similar in plan to the two co-operative experiments was carried out in ground not subject to such heavy fertilization and the experiment itself was more directly under control.

EARLY TOMATOES

Robt. Maxwell & Son, Leamington, 1926

Plot No.	Fertilizer Analysis	Yie per p		Value of yield per plot	Value of increase over check	Cost of fertilizer	Value of yield per acre
1 2 3 4 5 6 7 8 9 10 11 Check	0-16-0. 0-12-4. 0-10-4. 0-8-4. 2-12-4. 4-12-0. 2-12-0. 2-12-2. Acid phosphate. Raw Rock Phosphate. Basic Phosphate. S—No Fertilizer	81 72 75 63	oz. 4 1 9 14 0 9 13 14 11 11 8	\$9 04 8 00 7 95 7 47 7 58 8 56 8 38 7 47 7 75 6 52 4.35 7 59	\$1 45 41 36 97 79 16	\$9 60 12 88 12 08 11 28 16 20 17 80 15 20 15 70 9 19 9 19 5 29	\$904 00 800 00 795 00 747 00 758 00 856 00 838 00 747 00 775 00 652 00 435 00 759 00

The results from this plot are more subject to experimental error than is usual. The land had been in past seasons heavily fertilized. When the plants were set out, two plow furrows existed and two rows had to be planted near the furrow (rows 9 and 10).

The stand was also poor in some rows and an average per plant per row was struck to bring all to a uniform basis.

EARLY TOMATOES

E. J. Atkin, Leamington, 1926

Plot No.	Fertilizer Analysis	Yiel per p		Value of yield per plot	Value of increase over check	Cost of fertilizer	Return for \$1 spent in fertilizer	Value of yield per acre
1 2 3 4 5 6 7 8 9 10	0-16-0	136 135 120 105 115 108 105	oz. 9 15 8 14 3 5 7 13 1	\$8 61 8 64 9 32 9 29 8 45 7 16 8 41 7 96 7 87 8 51 9 28 9 74		\$9 60 12 88 12 08 11 28 16 20 17 80 15 20 15 70 9 19 9 19 5 29		\$861 00 864 00 932 00 929 00 845 00 716 00 841 00 796 00 787 00 851 00 928 00 974 00

The results as shown in the above experiment would apparently show a negative result from the use of fertilizer. The explanation offered for this situation is that the land used for the experiment is in a very high state of cultivation, being used in alternate years for growing melons for which crop it is heavily manured and fertilized. Applications of fertilizer for tomatoes here appear to be wasted.

Onions—Following up work previously started in 1924 from the Department of Horticulture at the Ontario Agricultural College, Guelph, a fertilizer plot was continued at the Rondeau Marsh. The results of this season's work appear in table form on a following page.

Onion Maggot Control

Heretofore all control measures for onion maggot have either proven ineffective or impracticable when tried on the extensive areas where onions are grown as a specialized commercial crop in southern Ontario.

Encouraged by results obtained on a plot started in 1925 with a new method in which the writer, co-operating with Professor L. Caesar, of Guelph, obtained fairly successful results, a further demonstration plot was arranged for 1926. Mr. D. R. Sands, of the Department of Botany, O.A.C., co-operated in working out this test.

Location—Pelee marsh, farm of J. A. Campbell.

A plot known to be in the probably infested area was chosen and five 5-row blocks of onions were selected, lying adjacent to one another.

MATERIAL USED

(a) Oil and fish-oil soap were made into an emulsion, being heated to aid emulsification.

Note.—Onions had been showing above ground for less than one week. No maggot or fly observed in crop to date; though adult fly had been active previous to this date in waste onion piles.

(b) Oil and copper sulphate—Hydrated lime emulsion was made under the cold formula.

Applications made:

May 20th, 1926—First application:

Plot 1, five rows—Oil soap emulsion.

Plot 2, five rows—Oil-Bordeaux emulsion.

May 28th, 1926—Second application:

Plot 3, five rows—Oil—Bordeaux emulsion.

Plot 1, four rows only—Oil soap emulsion.

Plot 2, five rows—Oil—Bordeaux emulsion.

June 3rd—Third application:

Plot 4, five rows—Oil—Bordeaux emulsion.

Plot 1, three rows only—Oil soap emulsion.

Plots 2 and 3, five rows each—Oil—Bordeaux emulsion.

June 10th—Fourth application:

Plot 1, one row only—Oil soap.

Plots 2, 3, 4, 5, five rows each—Oil—Bordeaux.

OBSERVATIONS

Owing to the scarcity of onion seed for the 1926 crop, much old seed of poor germinating ability was used by growers in 1926. Mr. Campbell was one of these and, coupled with this, was the very cold backward spring season of 1926. As a result of these factors, a poor stand of onions resulted. It was soon seen that the test plots selected were so uneven in stand that a harvest of the crop at maturity would have no bearing on the results of the experiment, so results were judged by frequent careful observations made on the plots while the crop was growing.

SUMMARY

The summary of observations conducted by both Mr. Sands and the writer led to the conclusion that the first two sprayings had proven effective, particularly did the first spray seem to have been timely in its application. The later sprayings, as well as could be judged, were of some value but the maggot was operating in the onions, apparently to a greater extent, proportionately with the later sprays.

Onion maggot did greater damage on the Pelee marsh in 1926 than in any season, ever before coming to the attention of the writer. Some whole blocks of pickling onions were made worthless while the main crop in the large area where the experiment was conducted was badly damaged. The early sprayed plots were noticeably freer from attack and it would appear that this method of control was well worthy of consideration and adoption by muck land onion growers.

ONIONS

Project—To conduct an experimental plot on muck land at the Experimental Farm, in order to determine the best fertilizer mixtures to use for the production of bulb onions:

"Small" onions were those of good quality and sound and firm—readily saleable as a smaller grade. "Large".—Large onions were those from which the smaller ones had been culled. "Waste".—Thick necks, green tops, rotten or in any way worthless onions.

ARTIFICIAL FERTILIZERS FOR EARLY POTATOES

Considerable work has been undertaken on the farm and on surrounding farms; the general conclusions drawn from the four years' work are as follows:

- (1) That at least two per cent. nitrogen in soluble form should be used. Where the land carries sufficient, but not in soluble form, the two per cent. will act as an insurance against retarded growth during a cold, backward spring.
- (2) The amount of nitrogen used should not exceed approximately five to six per cent. The fertility of each individual field has to be considered.
- (3) The use of clovers should render the application of more than two per cent. unnecessary.
- (4) Sixteen per cent. acid phosphate up to ten and twelve per cent. can be used in southwestern Ontario to very good advantage financially.
- (5) More work will have to be done to ascertain the percentage of potash but indications point to a range of from four to eight per cent.
- (6) Six hundred pounds of a mixture carrying approximately the amounts of nitrogen, acid phosphate and potash mentioned can be generally recommended per acre under reasonable conditions of fertility. However, the wide range of fertility of farms must always be given consideration before very much fertilizer should be purchased for early potatoes.

The above conclusions do not necessarily apply to late potatoes.

The co-operative sugar beet plots for the testing of fertilizers upon sugar beets give very excellent promise of results but no definite conclusions can be drawn until at least two more years of such work have been carried on.

In 1924 and 1925, the farmers were asked to superintend the thinning and weeding, but in 1926 this was undertaken by the Experimental Farm, in order to have a better control of the plot.

The outstanding factor that will always come to the forefront in such experiments has already become pronounced; that no two farms require the same treatment and that generally any farm requires somewhat different treatment according to the seasons. Undoubtedly it pays to fertilize in a general way for a cash crop as insurance against unfavourable weather; there is one exception in the plots, and an analysis of the results over a period of two years is interesting; in 1925 the acid phosphate alone gave the best results; in 1926, a 2-12-4 mixture was best with the acid phosphate a very close second. The amount of available nitrogen was evidently in sufficient quantities for maximum yields. Perhaps the addition of two to four per cent. of potash would be advisable.

The amount of nitrogen that should be added for general use cannot or should not be estimated from two or three years' work but two per cent. in an available form might well be recommended on all farms, except where special tests have been made, to give the young plants a strong start. It is doubtful, except on poor farms, whether the sugar beet crop can carry a fertilizer with more than two or four per cent. nitrogen. In three cases in 1926, mixtures carrying four and six per cent. did well but in two cases the land was not in the highest state of fertility and, moreover, the season seemed to demand a higher percentage of nitrogen than did 1925.

Because this section of the country is deficient in phosphates, there is no doubt about a mixture carrying eight to twelve per cent. phosphoric acid.

The amount of potash required will no doubt fluctuate somewhat with the amount of available nitrates in the soil. The experiments so far have shown

nothing very definite along this line except that, where a reasonable amount of potash was used, the tests for sugar remained a little more constant than where the potash was low or omitted.

Where the farms had produced abundant crops of clover for ploughing down, the acid phosphate gave excellent results demonstrating rather clearly that the overhead in the production of sugar beets may be reduced by the liberal use of clover even though some other crop may intervene between the clover and the beet crop.

FEEDING EXPERIMENTS

BEEF CATTLE-STEERS

Fed during Winter of 1925-26

•		
20 steers, average weight 1,012.5 pounds. 20,250 pounds at \$6.60 cwt., \$1,336.50. February 12th sold 1 steer to butcher, \$70; estimated weight, 1,050 p February 13th steer became sick; estimated weight, 1,400 pounds.	ounds.

NORTHERN ONTARIO DEMONSTRATION FARM

Spring weather opened up favourably and fields worked up in a wonderful state of tilth. Seeding was done under almost ideal conditions. Germination was satisfactory and early growth quite rapid. A heavy rain fall coming soon after the crops appeared above ground did some damage. Crops recovered splendidly, however, and produced a good stand. Excellent crops would have been realized except that a bad attack of grain rust (unusual to the district) hit the grain about the time it was filling and greatly reduced the quality of oats more than other cereals.

The demonstration of fall wheat, consisting of a fifteen-acre field, yielded at the rate of twenty-six bushels per acre. It is only fair to state that rust injured this crop to some extent and it was seeded on land that had only been ploughed once before. The demonstration was regarded as being sufficiently worth while to have repeated, and this fall a field of twenty acres was seeded. This was done ten days earlier than a year ago and as a result it went into winter quarters in more excellent condition than during the former year.

The distribution of pure bred live stock has continued as a principal feature of our work, especially in the selling of young Shorthorn bulls, Holstein bulls, calves and shearling rams. Distribution of shearling rams is possibly more desirable than selling ram lambs. By keeping them over they can be culled to better advantage and distribute a higher type of sheep. The inauguration of club sheep work is possibly the outstanding feature of the live stock extension programme and for the coming year there will be six flocks distributed to junior farmers.

Three pure-bred Yorkshire hogs (two sows and one boar) were added to the farm, being purchased at the annual O.A.C. sale. These hogs are of high quality and we hope will help improve the hog industry of the north country.

An implement shed and milk room were added to the farm buildings and

are serving a very useful purpose.

Red clover as a silo crop is being demonstrated again this year and giving good results. This crop will prove a useful silage crop throughout Northern Ontario.

Dates of Farm Operations

The dates upon which the more important farm operations commenced for the past year, are as follows:

First work on land	
Seeding Garnet Wheat	
Seeding Victory OatsJune 3, 4.	
Seeding Assalman OatsJune 4, 5.	
Seeding O.A.C. No. 72 OatsJune 8, 9.

Digging Potatoes	October 11.
Harvesting Roots	November 2.
Threshing	September 17.
Silo Filling	July 16, August 27.

SEASONAL NOTES

It will be noted from the previous table that the first work on the land commenced May 13th, as compared with April 29th the previous year. This date does not represent the average for the district and is accounted for by the fact that the farm fields are comparatively level and do not drain off as rapidly as the higher land.

Precipitation for the year is noted as 20.38 inches, slightly less than during 1925 when 23.38 inches fell. The total is also slightly below the average for the past four years and about the same as the average for the last thirty-two years. It may be of interest to note that the month of July recorded the greatest pre-

cipitation during the year.

Precipitation:

om baratura

The highest temperature for the year occurred August 3rd, and registered eighty-nine degrees. This is considerably below the highest temperature for 1925, when a temperature of ninety-four degrees was registered early in June. It will therefore be noted that the season was slightly cooler, on the whole, than during the previous year, the average highest temperature for 1925 being 63.75 degrees; 1926, sixty-two degrees, the average lowest temperature 28.66 degrees as compared with 26.5 degrees.

In comparison with these figures it is interesting to note, however, that there was a greater total number of hours sunshine in 1926 than in 1925, 1,574.5 as compared with 1,509.7. The month of May totalled the greatest number

of hours sunshine for any month during the year.

The frost-free period of seventy-five days is considerably below that of ninety-one days for the previous year. The average as noted in last year's report is 125 days. Early frosts, however, were so very slight that crops suffered really no damage at all.

ANIMAL HUSBANDRY

Dairy Cattle—The dairy cow is featured as one of the important things in connection with the live stock work of the farm and special efforts are being made to improve the quality of the Holstein herd. Some of the young stock purchased a year ago did not measure up to expectations, and will be culled. The calves from Champion Hartog Canary, while strong in constitution, appear to lack type to some extent and we are seriously considering the purchase of a new herd bull to replace the one already referred to. Type and test along with size are the features being kept in mind in building up the farm dairy herd. We believe a high butter-fat test to be possibly more important along with average production than exceptional production with a low test.

The five heifers purchased as calves from the Monteith Academy freshened during the year for the first time, showing up especially well. The triplet heifers gave birth to heifer calves, while the twin heifers each gave birth to a bull calf.

Shorthorn Cattle (Dual Purpose)—The Shorthorns have given a very credible account of themselves during the year and the offspring from Master Melody is of a high standard. It is interesting to note that many farm visitors inquire regarding the dual purpose Shorthorns. They appear to be in general favour with a large number of farmers and for this reason efforts will be made to keep the herd at a high standard. A number of very fine calves were sold to settlers during the year. Two tests made during the year for tuberculosis showed the herd to be entirely clean.

Five farmers used the Holstein bull. Seven farmers used the Shorthorn bull.

Sheep—Reference has already been made to the importance of this phase of the live stock work and it is a well recognized fact that sheep-raising is an important thing throughout many parts of Northern Ontario. Throughout the Districts of Temiskaming and Cochrane, one does not hear of ravages from wolves, but some damage was done during the year by dogs. The farm flock escaped any worrying by dogs.

Lambing results were much superior to those of the former year. Fifty-three ewes gave a total of seventy-six lambs, or an average of 1.43 per ewe.

Invariably they came strong and healthy.

The flock is regarded as somewhat too large at the present time and plans are being made to cull it rather severely. It is the intention to increase the standard of the flock and produce better stock for distribution that will be a credit to the institution. A greater number of ram lambs will be carried over to be sold as shearlings during the coming year than ever before. The demand is more for shearling rams than for ram lambs. This system also permits of better selection and the distribution of a more typy and desirable ram.

The following grading table is interesting from the fact that this year there are 185 pounds of medium staple as compared with nine-five the previous year. This is attributed altogether to care in winter feeding. At no time was feed put in the racks when the sheep were in the yard. Undoubtedly it paid well to take a little time and shut the sheep up before feeding. This permits keeping the wool very free from hay chaff and seed, and a already stated, gave a much better grading.

Horses—No change has been made in the horses during the year, therefore the same three teams have remained. The use of two teams in tandem was tried out on a gang plow for the first time this fall. Results proved very satisfactory indeed, and this arrangement helped to reduce the cost of plowing per acre really more than was expected. With two-thirds of 330 acres under cultivation there is ample work for the horses during the spring, summer and fall months.

Hogs—Three pure bred Yorkshire hogs were added to the live stock of the farm, being purchased in October at the Guelph Annual Sale. The two sows are of extra good quality. O.A.C. 3680, born March 20th, sired by Emperor O.A.C. 4th, and dam O.A.C. 3305. O.A.C. 3786, sired the same as the other sow and the dam O.A.C. 3170. The boar, O.A.C. Y-8, is of very high quality and conformation. He was sired by College Y-593 and O.A.C. 3549. This boar will undoubtedly assist greatly in improving the conformation of bacon type hogs in the district. Hogs, like sheep, are especially well thought of throughout most of Northern Ontario, and a ready market is available for all stuff produced.

FIELD HUSBANDRY

Hay Crops—As stated in last year's report, quite a large acreage was in hay land. This was reduced by fall plowing a year ago, and this year we had a total of eighty acres in hay crop, consisting of sixty acres mixed and twenty acres of alfalfa. No clover was cut for seed this year. Hay yielded a very satisfactory crop. The eighty acres, including the second cutting of alfalfa gave 106 loads or 1.76 loads per acre. The second experiment in alfalfa has proved so satisfactory that this year another twenty acres was seeded to the

same crop. The former twenty-acre field will be used for pasture during the coming summer. This is entirely a new experiment and demonstration for the farm and results are awaited with much interest. If this crop proves satisfactory for this purpose, it is the intention to use it quite extensively for pasture. One feature noted in connection with harvesting alfalfa is that it seems necessary to harvest the first crop earlier than has been the practice in the past. This is to allow the second crop to mature so that it may be cut sufficiently early in the late summer to permit satisfactory curing. It will also permit a better growth for winter conditions. Ideal weather prevailed during haying, and throughout the entire district hay of much better quality was made than a year ago.

Grain Crops—One-hundred and twenty acres were seeded to spring cereals, consisting of oats principally, barley and wheat. This area is divided up as follows:

Assalman Oats	
Victory Oats	20 "
O A C. No. 72 Oats	20 "
O.A.C. No. 3 Oats (about)	43 "
Alaska Oats	2
Barley	10 "
Mixed Grain	10 "

In addition to the above named the cereal crop for this year consisted of fifteen acres of fall wheat, Dawson's Golden Chaff, reference has already been made to the fact that cereals went into a good seed bed under favourable conditions. During the early stages of crop growth indications were that excellent crops would be harvested. These indications proved to be correct up to the time that cereals were attacked by rust. Never before in the history of the district have cereals suffered so extensively and to such an extent from the ravages of stem rust as this year. Very excellent stands of oats were reduced in yield and quality to fifty per cent. of the crop. This damage occurred in a very short time and no remedy was possible. Here and there through the district, one learns of farmers having yields of grain really equal to last year's, but this is the exception rather than the rule for 1926. No doubt it will be many more years before the district will have a re-occurrence of this thing.

On August 31st, 1925, a fifteen-acre field of Dawson's Golden Chaff was seeded and the crop cut this year was very satisfactory indeed. This crop suffered from rust which reduced the yield anticipated. Many visitors looking over the field decided that a yield of thirty bushels would be realized, twenty-six bushels per acre was the yield for the field. This year's crop of fall wheat was seeded ten days earlier and on better prepared soil, and went into winter quarters in splendid shape, in fact, the crop covered the ground like a mat and was in a very healthy condition. Many inquiries have come to hand in reference to this demonstration, and the coming fall will no doubt witness quite an increase in the acreage of fall wheat seeded throughout this section of Northern Ontario.

Seeding and harvesting dates are as follows:

Seeding Date	Kind of Grain	Harvesting Date
May 29th	.Garnet Wheat	.Sept. 13th
June 3th and 4th	.Victory Oats	.Sept. 23rd
June 4th and 5th	. Assalman Oats	.Sept. 17
June 8th and 9th	.O.A.C. No. 72 Oats	.Sept. 23rd
June 10th, 14th, 15th	.O.A.C. No. 3 Oats	.Sept. 8th, 9th, 14th, 15th
	. Alaska Oats	
June 17th	.O.A.C. No. 21 Barley	.Sept. 22nd

Garnet wheat was tested out for the first time under field conditions and it was most unfortunate that stem rust hit it so hard this year. It will be grown again in 1927, under field conditions and much better results are expected.

O.A.C. No. 3 Oats—Having in mind the suitability of this variety for Northern Ontario conditions it was deemed advisable to commence growing registered seed. With this end in view we communicated with the C.S.G.A., also with the Field Husbandry Department, O.A. College, Guelph. Replies to these inquiries were to the effect that no registered seed was available anywhere in the Province. It was therefore decided to secure from Professor Zavitz a small quantity of Elite Stock seed that would be pure as to kind. Professor Zavitz very kindly supplied one-half bushel, and this was seeded in a test plot. The ravages of rust, however, almost ruined the plot, so that results this year were nil from the standpoint of registration. Another attempt will be made during the coming year, as it is considered worth while in the interests of Northern Ontario agriculture.

Silage Crops—In last year's report it was stated that red clover was used for the first time as a silage crop. This was altogether a new experiment, and it was with some diffidence that results were anticipated. Expectations were fully realized when the silo was opened and feeding commenced. The silage came out in excellent condition and the live stock seemed to relish it very much indeed, in fact results were considered so satisfactory that it was decided to use red clover this year altogether. Therefore one field of red clover was set apart for this purpose and two crops were taken off it, one crop put into each silo. The second crop gave almost as great a yield as the first, Not having a platform scale it was impossible to weigh the yield per acre as the silo was being filled. Next year we hope to have data on this particular point. The small amount of labour required in the production of a crop of red clover as compared with corn or sunflowers is considered something in its favour. The use of the ordinary mower and hav rake facilitates handling very much. It possibly takes a somewhat larger acreage of red clover, but we believe the cost of the acreage required is much less than the labour cost in producing any kind of hoed crop.

A sample of the silage was sent to the Chemistry Department, O.A. College, Guelph, and the following report was received from Professor Harcourt:

Moisture	73.50 per cent.
Protein	4.90 "
Fat	1.35 "
Fibre	6.92 "
Ash	2.77 "
Carbohydrates.	10.56 "

The following analysis of corn silage as taken from "Feeds and Feeding" by Henry, is of interest in comparison with the above:

Moisture	73.6 per cent.
Protein	2.7 "
Fat	
Fibre	7.8 "
Ash	2.1 "
Carbohydrates	12.9 "

Oats and peas mixed is a crop that is sometimes used for ensilage purposes and a comparison between it and the two crops already referred to is of interest. Henry quotes an analysis of oats and peas as follows:

Moisture		
Protein	3.8	"
Fat	1.3	"
Fibre	9.6	"
Ash	2.8	"
Carbohydrates	10.0	"

It will be noted from the above tables that red clover silage compared very favourably with the other crops referred to, in fact, I think it may be regarded as superior to oats and peas, in that it has a greater percentage of protein, less fibre and a slightly higher percentage of carbohydrates.

Potatoes—Lack of proper storage facilities has made it more or less impossible to carry on much work in connection with the production of potatoes. Suitable storage will be provided at the earliest convenience, after which more or less special attention will be given to potato demonstration work. Potatoes are regarded as an important crop throughout Northern Ontario, and the value of work in connection with the production of same is fully realized, Irish Cobblers, Green Mountain, Dooleys, Pioneer Pride, were all quite successfully grown this year.

Roots and Vegetables—The production of roots and vegetables throughout Northern Ontario is of very great importance. Invariably there is a splended market for stuff of this kind as well as the necessity for farmers having it for home consumption. With the provision of proper storage facilities, systematic work will be carried on from year to year in testing out different varieties, especially in reference to earliness and yield. The importance of early maturing is recognized in the production of all farm crops, along with those other qualities which tend to a satisfactory yield, quality, production, etc.

Turnips have been grown on the farm with very satisfactory results. It is just possible that the importance of early seeding has not been recognized to the extent it should have been. This one factory seems necessary in order to permit them to attain mature growth before fall weather sets in. Turnips as a hoed crop, of course, require considerable attention by way of cultivation, hoeing, thinning, etc., but it does seem that nothing will really take the place of roots as part of the winter ration for live stock. This necessitates placing them among the apparently necessary fodder crops required to make up a well balanced ration.

EXPERIMENTAL WORK

Experimental or demonstration work was carried on only in a small way. As in the previous year, variety tests were made with cereals chiefly. The necessity for early work on the land and the seeding of field crops made it impossible to seed experimental plots at the same time. Rain came on just when we were prepared to commence work on the experimental plots and delayed seeding for about ten days. This naturally held up growth and caused the plots to be late in getting away to a start. The rod row system, in conjunction with fortieth acre plots was introduced this year and tested out for the first time. All plots showed up well in the early stages, and satisfactory yields would have undoubtedly been realized had not rust done such a great amount of damage. Wheat, oats, barley and peas were the principal crops tests out in this way, and the following tables will in part show the results obtained. Oats were so badly entangled in the rod rows that it was impossible to harvest them with any degree of accuracy. Rust weakened the stands so that they broke over and lodged in the variety beside them in the condition already referred to.

VARIETY TEST WITH SPRING WHEAT Date of Seeding, May 29th

Variety	Date of Ripening	No. of Days Ripening	Yield of Grain per Acre
Wild Goose. Durum. Quality. Reward. Marquis (selection made by Chas. Thomas).	Sept. 23rd Sept. 24th Sept. 15th	119 117 118 109 114	33.95 bushels 28.37 " 23.95 " 19.45 " 13.41 "

In reference to the above table it is rather interesting to note that the Durum wheats, represented by the first three on the list suffered less from the ravages of stem rust than the other varieties. The yields realized from the Durum wheats were very satisfactory, but yields from the other varieties cannot be taken as representative of the district.

VARIETY TESTS WITH PEAS
Date of Seeding, May 13th

Variety	Date of Ripening	No. of Days Maturing	Yield of Grain per Acre
O.A.C. No. 181 Early Raymond. Potter. Chancellor Canadian Beauty.	Sept. 26th Oct. 1st Sept. 30th	122 118 123 122 120	58.30 bushels 52.08 " 49.758 " 46.30 " 27.80 "

The above table shows results obtained from the five highest yielding varieties, and it must be admitted that these yields were especially good. The Early Raymond variety (originated by Mr. Chas. Thomas, R.R. No. 1, New Liskeard), noted for its early maturing qualities, ripened ahead of any of the other varieties this year, although the difference in the days to mature is not very great as between the earliest and the latest. The Early Raymond gave a much greater yield than last year, the 1925 yield amounting to 26.04 bushels. It is also of interest to note that a year ago, Canadian Beauty topped the list with a yield of 42.7 bushels, while this year it yielded only 27.8. Unfavourable weather conditions during the ripening period for a late variety like the Canadian Beauty is the explanation for this difference.

Barley Selection—For the past two years definite work has been carried on in the selection of a strain of O.A.C. No. 21 barley that apparently has the characteristic of shedding its awns during the process of ripening. Results this year were quite marked and efforts will be made from year to year to definitely establish this characteristic if possible. It is sufficient to know that this year's selection gave a higher percentage of bald heads at maturity than the selection of the previous year. This would seem to indicate that we are gradually working towards the goal in mind.

Sugar Beets—In last year's report quite extensive data was given regarding an experiment with sugar beets. Thinking possibly that we might create an

earlier maturing plant, we decided to select a number of roots and produce seed this year. One very outstanding feature about this experiment is the fact that one particular root yielded one-quarter of a pound of seed and matured very much earlier than any of the other plants. Four and three-quarters pounds of seed was realized from a one-hundredth acre plot and as already noted, one plant produced itself one-quarter pound. Some of the roots failed to mature seed at all, so that no very accurate comparison can be made in this way. Results obtained from this early maturing seed already referred to will be awaited with much interest during the coming year.

Spinach Seed—During the season of 1925, working in conjunction with Professor MacLennan of Guelph, we carried on a definite experiment in connection with the production of spinach seed. Results were not determined in time to be included in the farm report for 1925, therefore it will be included this year.

Professor MacLennan sent forward sufficient seed for approximately onetwentieth of an acre. The seed was sown on June 9th and harvested September 24th. As the farm did not have any means of cleaning the seed the crop in the rough was sent forward to the Department of Horticulture to be cleaned. Sixty-five pounds of good clean commercial seed was realized. This works out to a yield of about 1,300 pounds to the acre. The variety used was Virginia Resistant and the seed came originally from the D. W. Warren Company of Norfolk, Virginia. This company was primarily looking for a location where seed might be produced, possibly more resistent than southern grown seed, also earlier in maturing. Professor MacLennan was well pleased with the experiment, and the following information received by Professor MacLennan from two firms in New York State is evidence of the suitability of northern grown seed for use by southern growers.

Jerome B. Rice Seed Co., Cambridge, N.Y., Sept. 2nd, 1926.

Prof. A. H. MacLennan, Ontario Agricultural College, Guelph, Ont.

DEAR MR. MACLENNAN:

Sometime last winter your College sent to us a sample of Virginia Resistant spinach seed of which was said to have been grown "300 miles north of Toronto."

You will be interested to know that the trial ground report made of this sample at Cambridge, checking with seed direct from Virginia, reads, "By far the earliest of the Norfolk Resistant types; was all cut and out of the way before the Virginia stock was ready for cutting."

If growing the seed in that north country begets earliness, I would advise your doing a little experimental work with the "Princess Juliana," the most popular long season variety to-day.

With kindest personal regards, I am,

Cordially yours,

(Signed) CHAS. P. GUELF.

Joseph Harris Company, Coldwater, N.Y., Oct. 13th, 1926.

Department of Horticulture, Ontario Agriculture College, Guelph, Ontario, Canada.

GENTLEMEN:

You sent us a sample of Blight Resistant Savoy Spinach last spring for trial. We found it very resistant to disease and a rapid grower. Can you tell us where some seed of this strain can be obtained? We would like to get fifteen or twenty pounds for seed production.

Any information you may be kind enough to give us will be gratefully received.

Yours respectfully,

JOSEPH HARRIS COMPANY.

Alfalfa—The production of alfalfa is no longer in the experimental stage as it has been demonstrated quite satisfactory that it can be produced as an economical hay crop in the district. The following tables give yields realized from nine test plots seeded in 1924. These plots are one-hundredth acre in size, and the alfalfa was cut and dried in the ordinary way. Not having equipment to dry samples to a constant weight, it was decided to bag up the crop after having been fairly well dried in the field and store these bags inside until the alfalfa was entirely dry and take the weights. It may be considered, therefore, that the results tabulated are reliable.

ALFALFA YIELD

Date of Cutting, July 19th

Plot No. 1 yi	elde	d		 	 	 	 		 		 2 tons	981	pounds	per acre	
Plot No. 2	"			 	 	 	 		 		 2 "	993	- "	- "

Plot No. 4											2 "	1.531	"	"	
Plot No. 5	"			 	 	 	 		 		 2 "	1.737	"	"	
Plot No. 6											3 "	275	"	"	
Plot No. 7	"										2 "	1.706	"	"	
Plot No. 8	"										2 "	1.500	"	"	
Plot No. 9	"										ž "	1.062	"	"	
1100 1101 2			• • •	 • • •	 • • • •	 	 • • •	• • •	 	• •	 -	1,002			

Average yield per acre—2 tons 213 pounds.

Date of Cutting, September 15th

Plot No. 1 y	ielde	d	2	tons	787	pounds	per acre
Plot No. 2	"		1	"	1,087	"	"
Plot No. 3	"		2	"	337	"	"
Plot No. 4	"		2	"	156	"	"
Plot No. 5	"				381	"	"
Plot No. 6	"			"	218	"	"
Plot No. 7	"		2	"	912	"	"
Plot No. 8	"		2	"	712	"	"
Plot No. 9	"			"	575	"	"

Average yield per acre—2 tons 351 pounds.

It may be noted from the above tables that the average return per acre, including both cuts and from all the plots, amounted to 4 tons and 564 pounds.

Plots of mixed timothy, red clover and alsike, eight in all, one-hundredth of an acre in size, harvest, August 10th, gave the following yields:

MIXED TIMOTHY YIELD

Plot No. 1 v	ielde	d	. 2	tons	1,675	pounds	per acre
Plot No. 2					1,812	- "	- "
Plot No. 3	"		. 2	"	1,193	"	"
Plot No. 4					550	"	"
Plot No. 5	"		. 2	"	1.318	"	"
Plot No. 6	"				1.325	"	"
Plot No. 7	"				575	"	"
Plot No. 8	"				1,068	"	"

Average yield per acre—2 tons and 689 pounds.

In order to check up on field production, three plots, one rod square were taken from three different places in a field of timothy with the following results:

TIMOTHY YIELD

Date of Cutting, June 27th

Plot No. 1 yield	ed1 ton	1,097	pounds	per acre
Plot No. 2 "		771	"	"
Plot No. 3 "		1,481	"	66

This worked out to an average of one ton and 477 pounds per acre. The above consisted of almost pure timothy, as the previous year the field had been a mixture of clover and timothy.

Buildings.

The implement shed and milk room which were in course of erection at the time last year's report was issued, were duly completed and were found to be very useful. A small farm work shop has been established in one end of the implement shed and serves a very useful purpose in connection with general farm repair work, etc. During the early summer these buildings were painted to correspond with the other farm buildings.

Roadways.

Very little new work was done during the year in this connection, except that through the kindness of the Northern Development Branch, the main lane through the farm was graded up in excellent condition. Plans were under way to have the lane gravelled but the pressure of fall work and the earliness with which winter set in prevented these plans being carried out.

General Improvements.

The cleaning up programme commenced a year ago was pretty well completed with year, so that the farm yards, etc., present a more pleasing appearance. Further improvements are now being considered, especially landscape work. It is the intention to establish a permanent driveway around the buildings and then commence in a small way, tree, shrub and flower planting. Further work has been done in clearing up the different roots which come to the surface with each year's cultivation. Very little more work in this connection should rid the farm altogether of small roots and sticks.

As the farm yard is quite flat and drainage more or less unsatisfactory it was decided this fall to tile drain the entire yard. This work was surveyed and tile installed, and when the yard has been filled with stone and gravel it should be in first class shape. This work, of course, is quite permanent in nature and will last for many years to come.

Extension and Publicity.

Many farmers and others interested have visited the farm during the year, the majority being interested in the various lines of live stock and in other things. The demonstration with fall wheat also attracted quite a number of visitors and many favourable comments were heard.

The Annual Spring Seed Fair and Short Course held at New Liskeard used the farm stock for purposes of demonstration and a few classes were held at the farm during the course. During the summer months the Junior Farmers' Association from the vicinity of Englehart, visited the farm and an educational programme was arranged for the day. Mr. McNaughton, Vice-Chairman of the Overseas Settlement Committee, from London, England, was a visitor to the farm in the early fall. He was at that time just completing a survey of Northern Ontario and desired to look over the Demonstration Farm in order to view the crops, in particular. The Temiskaming Plowmen's Association held its third annual plowing match on the farm on the 29th day of September.

Reference has already been made to the extension work with Boys' Sheep Clubs, and much interest is anticipated in this particular line of work. The farm staff has co-operated in every way possible in extension work throughout the district in connection with meetings of different kinds, fall fairs, etc. Every consideration was given to the tour of the Demonstration Seed Cleaning Train and the farm along with certain farmers in the vicinity provided the necessary seed for the demonstration at New Liskeard.

SUMMARY

Agricultural conditions throughout this section of Northern Ontario, this year (1926) compare quite favourably with other years except for one or two things. First, the large amount of damage done by stem rust reduced the cereal crop very much in yield and quality. 1925 harvested one of the best cereal crops in the history of the district, therefore it was disappointing that so splendid a stand of grain should be so badly damaged by rust. It is not expected that there will be a reoccurrence of this thing for many years to come. The loss sustained due to a partial failure of the oat crop was very largely, if not altogether, made up from the splendid crop of clover seed harvested and the very excellent returns received from same. Twelve carloads of clover seed were shipped from New Liskeard alone; others from different points along the line of the T. & N.O. These twelve carloads averaged \$8,000.00 per car, which meant a very nice return to the farmers of the district. To individual farmers, returns varied from two or three hundred dollars up to as high as seven thousand dollars.

The potato crop was also very satisfactory. There being really no damage from rot or decay though yields were slightly below the average in some sections. Here, again, the price paid for potatoes was above the average, some farmers selling from the field in the fall at \$1.50 per bag, while the late fall prices went to \$2.00.

The live stock industry, dairying in particular, has increased during the year, and farmers are realizing more than ever before the importance of a steady return from this industry. Sheep and hogs have also increased in numbers and there have been many inquiries at the farm for ewes.

Reference has already been made to the use of red clover for ensilage pur-

poses, and results have been most encouraging.

The pea canning factory recently established had quite a successful year though some farmers suffered some loss in this crop due to excessive moisture in the early part of the season.

The production of barley increased very much during the year, the acreage per farmer ranging from 5 to 100 acres. Barley is used quite extensively by all farmers for live stock feeding.

The problem of marketing has been very well taken care of during the year. The various lumbering camps and mining towns along with construction camps here and there provide quite a splendid market for finished products.

Unlike most of the Province this section of Northern Ontario had quite a dry summer and fall, in fact, pastures never before were as slack as during this year. Clovers being more or less native to Northern Ontario helped out very materially in pasture.

Quite a number of inquiries were received during the year from prospective settlers, and a number of new settlers came into the district, settling either on

homestead land or purchasing farms.

The development of Northern Ontario agriculture is progressing very favourably, and it is the desire of the farm staff to have the farm function in such a way that real practical results may be handed out to the men on the land, who are doing so much to develop this great new country.

Ontario Department of Agriculture

ANNUAL REPORT

OF THE

STATISTICS BRANCH 1926

PART I.—AGRICULTURAL STATISTICS PART II.—CHATTEL MORTGAGES

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY OF ONTARIO

TORONTO

1927

Ontario Department of Agriculture Statistics Branch

PART I—AGRICULTURAL STATISTICS

THE WEATHER

TEMPERATURE.—The following table gives the temperature of the Province for each month during the last five years, together with the mean annual temperature, also the mean temperature for the six months, April-September, practically the growing season, together with the average for the five years, 1922-1926, and the forty-five years, 1882-1926.

Months	1926	1925	1924	1923	1922	1922- 1926	1882- 1926
	, 0	0	0	0	0	0	0
January	19.6	14.1	16.9	16.4	16.8	16.7	17.8
February	17.2	23.9	15.8	14.5	19.5	18.2	17.5
March	22.0	31.5	29.1	22.6	30.8	27.2	27.3
April	34.8	44.2	41.1	39.4	43.2	40.5	41.7
May	51.1	49.1	48.6	50.2	58.3	51.5	53.5
une	58.5	65.3	61.6	65.6	64.3	63.1	63.5
July	66.5	65.4	65.6	67.2	67.2	66.4	67.7
August	66.3	66.9	64.5	64.2	65.6	65.5	65.7
September	57.4	59.5	55.6	59.3	61.3	58.6	59.3
October	45.8	39.9	49.9	46.8	47.6	46.0	47.4
November	33.9	34.1	36.1	36.4	38.0	35.7	35.3
December	20.7	22.3	18.6	33.0	23.	23.6	23.5
Annual Mean	41.2	43.0	41.9	43.0	44.7	42.7	43.3
April to September	55.8	58.4	56.2	57.7	60.0	57.6	58.6

The mean temperature for 1926 was 41.2 degrees, or 1.8 degree colder than the preceding year, and 2.1 degrees below the normal of the forty-five years, 1882-1926.

The mean of the six growing months, April-September, was 55.8 or 2.6 degrees below the preceding year, and 2.1 degrees colder than the forty-five year normal. January and August were the only months that were above average, January with 1.8 degree being the highest, while all the others were below, ranging from 0.3 in February to 6.9 in April.

Sunshine.—In the following the averages of sunshine are derived from the records of the weather stations at Woodstock, Toronto, Lindsay, Kingston and Ottawa.

	1926	1882- 1926
hrs. hrs.	.4 76.7 .4 102.2 .6 146.3 .3 190.0 .0 230.3 .5 248.7 .8 278.5 .0 247.1 .0 163.0 .8 150.7 .7 75.1 .8 64.4 .3 1,973.0	2 104.2 145.6 181.9 214.3 248.5 268.5 240.3 183.5 7 78.0 62.5 1,944.4

The year 1926 had 1,852.0 hours of sunshine, 92.4 hours less than the average for the last forty-five years. The six growing months, April-September, had 1,296.8 hours, or 40.2 hours less than average. Four months were above and eight below normal. May had the greatest departure above with 48.3 hours, and August the greatest below normal with 53.2 hours.

PRECIPITATION.—The fall of both rain and snow for the five winter months, including November, 1925, and March, 1926, is given in the following table for five years, together with the average for the forty-five years, 1882-1926. Ten inches of snow is equivalent to one inch of rain.

Months	1926	1925	1 924	1923	1922	1922- 1926	1882- 1926
November, 1925: Rain	in. 2.52 5.3	in. 0.96 6.2	in. 2.16 4.2	in. 1.25 5.1	in. 1.08 11.7	in. 1.59 6.5	in. 1.93 7.2
Rain Snow January, 1926: Rain	0.66 13.8 0.54	0.94 13.8 0.03	2.04 8.6	$0.47 \\ 14.2 \\ 0.35$	1.39 12.9 0.33	$ \begin{array}{c c} 1.10 \\ 12.7 \\ 0.57 \end{array} $	15.2
Snow February: Rain	17.4	18.4	24.0	20.9	0.33	18.9	18.9
Snow	16.0	10.0	20.9	12.9	16.2	15.2	15.8
Snow Five months:	18.0	11.4	5.4 6.48	18.1	8.0 4.90	12.2	10.7
Snow	70.5	59.8	63.1	71.2	62.9	65.5	67.8

The total amount of rainfall for the five months was 5.08 inches, or 0.93 inch below the average of the forty-five years, 1882-1926.

The total amount of snowfall was 70.5 inches, or 2.7 inches above normal. February was slightly above, 0.2 inch, and March 7.3 inches, were the only months to exceed their averages, the rest all being below.

The rainfall for the six months, April-September, comprising what is regarded as the growing season for most crops, is given in the following table covering the last five years, 1922-1926, and the normal for the forty-five years, 1882-1926.

Months	1926	1925	1924	1023	1922	1922- 1926	1882- 1926
April May. June. July August September.	in. 1.53 1.47 3.28 2.72 4.10 4.12	in. 1.18 1.53 3.52 3.48 1.77 4.11	in. 2 05 3 52 2 37 3 47 2 78 4 11	in. 1 81 2 85 3 13 1 99 2 75 2 54	in. 3 22 1 86 3 47 3 50 2 31 2 34	in. 1 90 2 25 3 16 3 03 2 74 3 44	in. 1 86 2 74 2 80 2 83 2 68 2 73
Total for six months	17.22	15,59	18.30	15 07	16 70	16 58	15 64

The rainfall for the six months, April-September, was 17.22 inches, or 1.63 inches more than the previous year, and in comparison with the forty-five years was 1.58 inches greater. Three months were below and three were above their respective normals, May, with 1.27 inches below, and August, with 1.42 inches above, had the greatest departures during the growing season.

STATISTICS OF FARM CROPS

			Bushels	Market Value			
Field Crops	Acres	Production	pe r acre	Total	Per acre		
		bush.	bush.	\$	\$ c.		
Fall Wheat	807,015	20,988,030	26.0	26,262,506	32.54

Sweet Clover	365,102	810,852	2.22	7.222.221	19 78 _		

The acreages devoted to other crops in 1926 were as follows:—Orchards, 215,779; strawberries, 7,274; vineyards, 7,545; other small fruits, 13,672; summer fallow, 189,488; pasture (cleared), 3,077,424.

Tobacco.—It is estimated that 19,992 acres were grown in tobacco in 1926 yielding 25,557,724 pounds, or 1,278 per acre. Of this Essex had 9,213 acres, 11,682,084 pounds or 1,268 per acre, and Kent had 9,355 acres, 12,591,830 pounds or 1,346 per acre.

RAPE.—The estimate for 1926 was 22,594 acres of which 7,422 are in Wellington; 2,929 in Grey and 4,592 in Dufferin.

SPRING SOWING AND VEGETATION

All preparations for sowing as well as conditions of vegetation were affected by unusual weather during the whole of the 1926 season, so that it went on record as an exceptionally wet year. Seeding and cultivation began well enough, but were soon set back by the climate. Winter had made a heavier than usual call upon all kinds of fodder, livestock having been stabled early and kept in late. The actual growing season was relatively shortened for farm operations and was also capricious and slow, developing as the months passed into a decidedly backward harvest. The outstanding feature of the crop year appeared in the ability of the farmers to make the most of the conditions facing them. Though behind with operations they were not discouraged by an existing situation or by uncertain prospects for the time ahead. A great deal of plowing had, of necessity, to go over until the spring of 1927; but broadly speaking, the job of maintaining the area of sowing and vegetation was well attended to in every section of the Province. The season afforded no slight proof of strength in the structure of agriculture in Ontario and generally sound practice of Ontario farmers in every department of production.

The crop most injured was corn, and that mainly from the ravages of the European borer, very few cheerful references appearing, so far as reports dealt with this particular crop. There is no question that the farmers of the Lake Erie district are going out of corn-growing on an appreciable scale, and that their alarm is spreading among corn-growers of the entire Province. Tobaccogrowing in special areas and other crops generally are receiving some of the attention formerly devoted to the fight against the European corn-borer, in the final issue of which strong hope has had partial suspension so far as the

actual cultivators are concerned.

With regard to old alfalfa meadows, oats, barley, peas, beets and some other crops, the injuries of the season were in the main traceable to weather conditions. Spring crops were put in by special effort towards acreage, and fairer prospects of improving conditions for the spring were entertained.

THE GRAIN CROPS

FALL WHEAT.—Bulletin 166 (April, 1926) indicated a late start for the wintering crops. Of a full acreage of fall wheat put in, a good deal had a rather small top when overtaken by winter. Snow covered the ground normally and but little actual winter injury was to be complained of. Fall wheat, in fact, came through in the condition it had attained at the beginning of November. It was because much seeding had been done late that the weather of April proved so trying to fields with too light a top for wintering. Correspondents found that

on low lands the April weather brought in evidence more than usual effects of ice and water; this along with some heaving of heavy soils. Injury to the young plants from both sources was placed from 20 to 30 per cent. Estimates of the crop plowed up ran about 10 per cent. of the whole, replaced by barley or other grains. The reports showed comparatively little injury from insects. Taking the Province of Ontario all in all, the spring was a backward one after one warm spell.

The August Bulletin reported excess rain in the ripening stage of the crop, as well as in the late season and added: "A common feature of harvesting was more than the average percentage of sprouting." Notwithstanding this factor, the volume of grain was reported fair or good in the principal fall wheat districts. Not a few cheerful reports came out of the middle belt of the peninsula, whilst counties fronting Erie, Ontario and Huron had varying conditions to cope with. Indications of smut and rust were of more than usual occurrence. Those who delayed threshing got wet shooks and a good deal of wheat stood in the fields a long time. The earlier threshing reports gave reassuring results with exceptionally fine yields in places. The Lake Ontario section had a fair crop taking the weather into account. With uneven conditions in ripening very much in evidence the quality of grain was up to the average and early harvesting, wherever practical, realized the most satisfactory results. York County sent in reports of good average yield. As harvesting became general, the prevailing weather showed no improvement and in November an exceptionally wet year was acknowledged from every section of the Province. In such a season the outstanding feature of the cereal harvest was the relatively high quality of the fall wheat, many sections sending in reports of excellent quality. On the whole, though short in quantity, the crop was fair for so wet a season. Dawson's Golden Chaff, and O.A.C. 104 are varieties in highest favour over the entire Province. O.A.C. was an average crop of wheat wherever ground had been prepared in good time. Late wheat was discoloured by exposure to frequent rain

The New Fall Wieat.—In the December Bulletin the following appeared: "Despite unfavourable weather the new fall wheat sown in 1926 will be close to the 1925 sowing. Especially where ground was prepared the seed was sown in good time and under more favourable conditions, but where ground was plowed after harvesting, wet weather interfered as a general condition with operations. Conditions of the ground at seeding time in different sections of the Province were reported in the whole excellent for growth with plenty of moisture, so that the crop, before the snow fell, looked in thrifty condition for winter. The leading fall wheat counties were well prepared for early operations.

Spring Wheat.—The December Bulletin reported spring wheat below normal in sample, generally speaking, but in the northern areas a good crop. Severe injury was reported from rust. The area sown, as well as the yield, apparently decreased. The total yield was noticeably under 1925.

OATS.—This crop was in most sections light to fair in the best, showing damage by rain after cutting and considerable wastage from weather conditions. The grain was good in quality but under weight.

Barley.—Heavy and frequent rains at harvest damaged a crop of excellent early promise. Particularly unfavourable conditions overtook the late seeding.

RYE.—What rye was raised for grain was damaged as much as other crops, whilst the weater was not at all favourable for cutting green or plowing under. Even in a normal year the crop would not be in line for an increase in point of acreage.

PEAS.—The crop of peas was a good one for the acreage sown. Some of the central counties reported returns better than in the preceding year. Prices were good and the canning centres experienced satisfactory results from all but the late peas which were damaged by rain.

BUCKWHEAT.—Buckwheat, owing to the character of the weather, suffered in a marked way, being exposed to some frost, as well as rain. The stooks in many sections stood in the fields in December.

Corn.—The December Bulletin reported seed corn, even in some of the best districts, badly damaged by weather. When correspondents were reporting in November few of them omitted mention of injury from the European cornborer. Consequently, as the Bulletin stated, "silo-filling was late all over the Province, as well as in the western peninsula, and some districts reported 50 per cent. of corn uncut in mid-November."

Several correspondents agreed in the same opinion that corn will be neglected if the borer cannot be controlled. Some places will be left distinctly short. Ensilage was not of satisfactory quality, whilst the work of harvesting was labourious and slow, a lot of corn being cut by hand and silo-filling made a veritable problem.

Tobacco.—Though reduced in value by weather conditions mainly, the tobacco crop was judged very good, excellent flue-cured tobacco being reported. An increased acreage was the feature of the season, the County of Elgin being prominent in its appreciation of tobacco growing.

Beans.—The crop filled out early and looked promising, but later in the harvest season suffered severely from rain. Unfavourable conditions for harvesting prevailed all over Kent, Welland and Elgin. Huron County growers were not as badly hit as those along Lake Erie, where very early beans came through without heavy injury.

HAY AND CLOVER

The winter of 1925-26 was not only long but spring was reluctant and vegetation slow. Pastures were much less advanced than usual in May, and it was obvious at the start that meadows would be the source of some anxiety to the farmers. The advancing season turning out wet, brought better than average results in the long run.

CLOVER.—There had been considerable heaving of clover, especially on old fields with ice and water in low-lying land, occasioning additional injury. But the haying season was favourable and correspondents reporting in regard to it described an extra good crop that went into the barns well secured.

CLOVER SEED.—The December Bulletin said: "Wet weather injured clover seed fields of all kinds and made it practically impossible to harvest the seed crop over large territory. A considerable diminution in the usual quantity of red clover seed was estimated. First crop alfalfa was saved with but slight damage by rain in some sections. The crop in Peel was excellent as to quality.

Alfalfa.—The indications in May were that more alfalfa was being grown instead of red clover, and had done much better than red clover. New seeding came through the winter far better than the old fields. Conditions at cutting time, especially of early crops, were reported very good. Two cuttings in Peel yielded three tons to the acre. In December, a Peel County correspondent said: "Alfalfa was a splendid seed crop though delayed and slightly damaged by rain. The average yield was about 7½ bushels. The year's catch was good."

ALSIKE.—Alsike yielded about 60 per cent. of the average, and generally was of good quality. Some yields are reported especially good. Sixty to seventy thousand dollars' worth of alsike was sold in the Kenora district.

Sweet Clover.—This crop, like alfalfa and alsike, had the season's chances to contend against, and some contributors of information to the May Bulletin impressed that it was losing favour in respect to value as fodder and for seed.

POTATOES AND FIELD ROOTS

Potatoes.—In August the Bulletin said: "The crop taken out of the ground early was fair, showing practically no injury. It found a good market and brought satisfactory returns. Reports of later varieties were less favourable by reason of weather conditions. The crop in the whole withstood very well both excessive rains and menace of rot. The acreage planted was below normal with increases noticeable in some seed-growing sections. From northwestern fields early reports were excellent, although the weather held dry while the tubers were forming. Less injury than usual from blight was the general report. The later reports showed the tubers to have grown well but absorbing moisture developed rot to a serious extent. Farmers who tried to grow potatoes in heavy land left fields undug, but in light land the crop in many places was good. Everywhere the wet weather worked more or less injury."

Turnips.—In August extensive injury was manifest both from weather conditions and the turnip fly, damage amounting to practical failure being reported from some sections. Fields were plowed up and it was only here and there that fair accounts came through. In December it was admitted that turnips had suffered most in the 1926 list of root crops.

Mangels.—Conditions were more favourable for mangels, and these extended over the whole Province. Growth from the start was excellent and in December it was ascertained that the crop would be a dependable factor of feeding in winter, which came in with suddenness and definitely. The yield of mangels was little below the average, if anything, and the quality proved good. All roots had been lifted and stored by November 20th.

Carrots.—Decreased attention appeared to have been given to this crop which gave an over average yield where grown. At pulling time the ground was not in favourable condition as a rule, but in Lincoln County the crop was taken up about the usual time and was better than average quality.

SUGAR BEETS.—Early conditions, as observed, were favourable to the crop, although inadequate moisture was experienced in the first stages of growth. Conditions were consistently fair through the season, and at harvesting the average returns ran twelve tons to the acre, particular fields giving heavier yields. Some reports were of an under-average sugar content, but in the main the character of the crop was satisfactory, though somewhat behind in time of delivery. An East Kent correspondent reported 50 per cent. of beets delivered by the middle of November.

MISCELLANEOUS FEATURES

FLAX.—Merchantable flax seed was around 80 per cent. of the season's production.

FALL PLOWING.—Seldom have the farmers of Ontario experienced a year of greater necessity in every section of the Province to let plowing go over till

spring. But a tremendous effort was put forward to keep the acreage undiminished against heavy odds in the way of rain and the falling in of an early winter.

Threshing and Marketing.—For wheat threshed by mid-October marketing was rapid. Other grains with the exception of oats, which were very light, proved fair in yield and any small surplus available could be promptly sold. Most was kept for feeding. Buckwheat, beans and clover were late in threshing and considerable buckwheat remained in the shock. About 80 per cent. of oats and barley was threshed in good time, and these grains are not marketed. The final estimates of the year indicated that a considerable quantity of screenings would be bought for feeding hogs and cattle.

FARM IMPROVEMENTS.—The years 1925-26 were noted for the amount of improvement being done around the farms, and farm buildings of the Province. The year 1926, said the December Bulletin, proved more than any of its predecessors, the case for drain tiling, but on account of the prevailing weather little tiling could be actually taken in hand.

Fruit.—The April Bulletin stated: "All classes of fruit have come through with comparatively small injury from winter weather." Some damage was done in places by ice storms, and owing to the steady covering of snow, field mice and rabbits did considerable girdling of young fruit trees. Correspondents estimated that greater harm had been done by mice. A promising showing of buds on the fruit trees, and no complaints regarding small fruit bushes and vines. The slow spring, however, put blossoming back about two weeks and some reports told of winter-killing of peach buds in the Lake Erie and Niagara sections. Other discouragements developed as the season progressed and the August Bulletin made it plan that apples would be below the average in the best orchard districts. Cold weather, late frost and heavy winds had done the damage in the orchards. Spies were quite scarce in the market, as well as other winter apples. Norfolk correspondents sent the most favourable reports received, opinion there claiming 75 per cent, of the average crop. All the commercial varieties of apples were short of the demand, and only modest claims were made for Huron County, which, along with the Georgian Bay district, gave some fair returns. Duchess gave a good account of itself in a poor year. Late varieties gave the smallest returns, or about 25 per cent. of the normal crop. The late harvest reports were that the Ontario apple crop had left the local market poorly supplied with winter varieties and imported apples were selling in the fall in unusual quantities.

Pears were produced in comparative plenty, in view of the general conditions of the season, but not an average yield.

Plums were a heavy crop, the Niagara peninsula furnishing a supply quite ample for all local demands.

Peaches were late in ripening and were light in yield, estimated from 25 per cent. to 50 per cent. of the avearge Niagara production. Rough winds, lingering cold in the early season, and some frosts in the blossom time handicapped the general crop; but peaches, when they came on the market in restricted supply, were of good quality.

Cherries were plentiful and rapidly marketed.

Grapes, generally a reliable crop, had given good promise in the early stages of growth, but the broken and cool weather retarded ripening and the fruit did not make its appearance on the market till the end of September. The closing weeks of the harvest season were quite as disappointing.

Blueberries from the north remained long upon the market and were of excellent quality.

Strawberries were late and patchy and the market for them was to an unusual

extent spoiled.

LIVE-STOCK

Live-stock wintered quite fairly and prices were good throughout the year. The April Bulletin stated that an unusual call upon all kinds of fodder marked the rather long 1925-26 winter. Cattle, however, were maintained in good condition. Dairy cattle, horses, swine and sheep all showed successful husbandry for an exacting year. Hav was practically exhuasted by the time the new crop became available, and there was not more than a sufficiency of oats. Silage, under the labourious circumstances of silo-filling, held out remarkably well, and the usual quantity of mill feeds and concentrates was not exceeded. But lingering winter conditions obliged many farmers to turn their animals in pasture before the covering was very inviting. Prices of horses kept up especially for draught Milk flow was reported excellent through the summer months and was not checked by the later conditions of pasturage described in dairying sections as the best ever known. With the approach of winter, again the conditions were at their best and livestock everywhere came off the pastures very fit. In some low pastures the herbage had been soft and poor in feeding value by reason of much rain; but the common experience of the season had been that stock were never in better condition to meet the winter. In old Ontario winter appeared definitely settled at the beginning of December, and in Northern Ontario snowfalls and low temperatures had occurred earlier than usual. Ample rough forage and other feed to carry the stock safely to springtime were reported. Oats, the principal grain for feed, had turned out light and farmers were buying wherever they could at 50c., 65c., and 80c. a bushel. Several localities reported need for oats in considerable quantity. The abundant store of roughage was credited to the popularity of alfalfa and the high relative yield of hay. feed and corn were being purchased to make up for anticipated deficiency. Only among neighbours was grain to be sold and surplus alfalfa hay was available at reasonable prices. For cattle and hog feed grain was \$2.00 per cwt.

Prices throughout the year indicated sound trade conditions in regard to nearly all classes of livestock. In mid-November quotations were: Hogs, \$10.75 per cwt.; calves, \$11 and cattle \$5.50 and \$6.00; sheep, \$6.00 to \$7.00; lambs, \$9.00 to \$10.00. Sheep and lambs seldom had gone into winter quarters better looking. Choice butchers' steers and heifers brought from \$6.00 to \$6.50; common, \$4.75 to \$5.00. Fat cows were sold at \$4.50 to \$5.00, and common, \$3.25 to \$3.75. Demand for canners was from \$2.00 to \$2.50. Baby beefs sold around \$11.00 to \$11.50 and choice feeders, \$5.75 to \$6.00. Quotations for hogs went to \$10.00 and \$11.00 live weight, and \$12.00 to \$13.00 for select bacon. There was no sign of depression in the livestock market up to the end of the year

DAIRYING.—A stable situation is stated to have marked the leading farm industry of the Province through the year. Cheese prices were low because of the situation in Britain, but some signs were becoming visible of improvement in the affairs of the working classes of England. The average fall in price was from 5c. to 6c. Butter, on the other hand, brought fair prices in the home market and there was not much for export. Betterment in quality and uniformity were marked from the beginning of the year, and the tendency of prices to rise with

the coming of fall was well asserted in face of large production. Correspondents both in Western and Eastern Ontario referred with satisfaction to the effects of experience in cream grading. No outstanding features were described in regard to dairy herds, and Holsteins hold the place of favourites. Too many farmers in all sections of the Province are milking cows giving low-per-day yield. Correspondents generally incline to the opinion of steadily improving outlook for butter. Flow of milk and price arrangements with dairies in the principal cities of the Province were not complained of during the year.

Poultry.—Poultry raising gained perceptibly in the course of the year. The general turn of comment upon this industry was favourable. Returns are profitable both from eggs and dressed poultry. Farmers are resorting in marked numbers to the practice of obtaining chicks from poultrymen with large incubators and this has its effect in the increase reported in farm flocks. Turkeys were reported to have done rather badly owing to the wet weather, and the demand for Ontario turkeys was not fully supplied. Distinctly favourable comment has been the rule in regard to egg grading. It has stimulated the domestic market more than was anticipated, and under its influence Ontario eggs are advancing into higher favour all the time.

FODDER SUPPLIES

The experience of the year, except for rough fodder, impressed the farmer with the necessity for large provision of oat supplies. It is to be concluded from the remarks of correspondents that the proportion of oats must be increased very considerably to be adequate. The shortage of 1926 is not likely to be incurred again. What is happening to the corn crop is another reason for placing more dependence upon oats. It is likely that all fodder supplies planned for will be fed on the farm. Activity in the dairying line under any circumstances would mean a shortage of some grains in certain diarving districts, and as there was no fodder or grain for sale in the late winter, replenishing of supplies became a pressing order with farmers generally. Quite as many cattle are being fed, and whilst economy had to be systematically practised in 1926, one of the lessons of the winter was of vigilance concerning the immediate future. According to the August Bulletin, farmers were then thinking of increasing their stock in prospect of an easy winter, which, as events turned out, was a rather sanguine view. Oats fell very short in supply, and it is inevitable that this is to be the principal line by which farmers have decided to lay up supplies. The fact that turnips were a partial failure is calculated to turn increased attention to the supply of roots.

LABOUR AND WAGES

According to the April Bulletin the more or less chronic scarcity of labour was not pressing, except in regard to skilled labour, which correspondents were united in describing as very hard to get. Domestic servants were also scarce as ever. Labour wages ranged from \$25 to \$40 per month, with board, averaging \$33 by the month and \$2 by the day, or a little higher, some men holding out for \$2.75 and \$3. Yearly rates for single men ran from \$250 to \$350, according

to ability. It was noted that married men are not so much in favour as helpers as formerly.

The August Bulletin also voiced less complaint of the supply of farm labour and more as to the quality of the help offered. The per day rate paid was \$2 to \$3, according to ability and the needs of the locality. During the heavy haying time, labour was scarce in more remote localities. Close to large centres, as in York County, \$35 to \$50 a month, with board, was paid. Year-round contracts are not in the increase, though wages from \$300 to \$325 are obtainable. The class of immigrants offered as farm help are, as a rule, inexperienced or have a lot to learn concerning the Ontario farm. Men coming from Scotland appear to be suited to the needs of the average employer, are best adapted to social conditions, and generally give satisfaction.

Some of the remarks of correspondents point to striking uniformity of farm experience with labour: "The Government would be in a good work training agricultural workers on a farm in each township for a year or more " "Farmers are largely doing without help." "Immigrants have been helping Ontario to some extent, though not equal to home help." "Some married men are being paid \$75 a month with house, garden, milk and wood." "There is strong demand for experienced men, especially those who can milk." "Immigration of family units should be tried." "A steady immigration policy with more careful handpicking of immigrants." "Farmers should sell some of their land to immigrants with money." "Too many farmers hire for summer and allow their help to go in the fall." "Good horses are spoiled by green help sent to the farmers." "Those only have satisfaction who keep their help the year round." "There should be the freest admission of farm labour from the old land." "Farm help is absolutely essential." "We want Scotch and Irish help, both male and female." "The Scottish and Danish immigrants have proven the most satisfactory." "A logical plan to follow would appear to be that all immigrants designated for the farms of Ontario should receive a special training before being hired out."

A phase of the situation deserving of attention is the tendency of an apparently increasing number of farmers to dispense with hired help because of the difficulty of obtaining it and its uncertainty when hired. This is indicated by correspondents from practically all the counties of the Province: "Farmers are largely doing without help and procuring more modern machinery." "A number intend to get along without hiring help, doing what they can themselves and seeding down a considerable acreage to grass." "Farmers who have help of their own are gaining, but those who have to hire are at a standstill." "Much farm land will go without a crop." "Farmers will get along alone rather than increase wages." "Farm conditions do not warrant any raise of wages." "Art and science are lessening muscle work."

The boy labour problem is not altered from what it has been, although a more satisfactory note is often struck in the comment upon it. Thus: "The Salvation Army in Woodstock has done much to help farmers in this section." "Boy scheme is O.K. but here also handpicking is desired."

The Ontario farmer is prone to depend on family help to the furthest possible extent. The female domestic is becoming unknown on the farms of the Province, and there is a general demand for her class with but slight chance of having it responded to. Indeed, as time goes on this phase of the farm help problem grows more difficult. On the farms near enough to towns the situation is without much hope. A Victoria County correspondent declares: "Female help is out of the question."

TEMPERATURE, 1926

Table I.—Showing for each month the highest, lowest, mean daily range, and mean temperature at the principal stations in Ontario for 1926; also the annual mean for each station.

APPENDIX

Comparative Farm Statistics for Forty-five Years—1882 to 1926

FALL WHEAT AND SPRING WHEAT

The following table gives the area, produce and market value of fall wheat and spring wheat for the years 1882 to 1926, together with the annual average for the various periods of ten years, and the average for the forty-five years.

		Fall Wh	eat		Spring Wheat

Twenty-fifth Annual Report

OF THE

Temiskaming and Northern Ontario Railway Commission

ONTARIO GOVERNMENT RAILWAY

Hon. G. Howard Ferguson, Premier

For the Year Ending October 31st

1926

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY OF ONTARIO

TORONTO

Printed and Published by the Printer to the King's Most Excellent Majesty

To His Honour Henry Cockshutt, Esq.,

Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOUR:

The undersigned has the honour to present to Your Honour the Twenty-fifth Annual Report of the Temiskaming and Northern Ontario Railway Commission, for the fiscal year ended October 31st, 1926.

Respectfully submitted,

G. Howard Ferguson,

Prime Minister and Proceedent of the Council

TEMISKAMING AND NORTHERN ONTARIO RAILWAY COMMISSION

GEO. W. LEE	Chairman, North Bay.
COL. J. I. McLAREN	Commissioner, Hamilton.
LTCOL. L. T. MARTIN	Commissioner, Ottawa.
W. H. MAUND	Secretary-Treasurer, North Bay.

TEMISKAMING AND NORTHERN ONTARIO RAILWAY Fiscal Year, 1926

Business conditions in general throughout Canada materially improved during the current year, and these are properly reflected in the increased gross and net results of operation of the Temiskaming and Northern Ontario Railway, resulting in one of the best years in its history.

Northern Ontario is rapidly advancing in all its undertakings, and yearly its wonderful possibilities are becoming more widely known and appreciated. The extent of the natural resources of the Northland is enormous and becomes

more apparent each year.

The mine, forest, field, lake, river all contribute to make the country one of the greatest in potential wealth on the Continent and its development within a few years has been one of the spectacular romances of Canada and is inseparably linked up with the progress of the railway that has been mainly instrumental

in opening up this richly endowed part of the Province of Ontario.

This development will, undoubtedly, be as rapid in the future as in the past, due to the Government's increasing interest in the opening of the Clay-belt for settlement, and its generous consideration of the added requirements of agriculture and mining. When we consider the development and expansion of mining interests, we find that it is one of the most important of any country and only in its infancy. Sixteen years ago the entire gold production of Ontario was valued at less than forty-three thousand dollars, while in 1926 it reached the huge sum of thirty million dollars (\$30,000,000.00) and within a few years the dividends declared and paid by the precious metals mines within the territory served by the Temiskaming and Northern Ontario Pailway approximated—including 1926—one hundred and sixty-two million dollars (\$162,000,000 00).

With gold discoveries in one hundred and ten (110) townships along the route of the railway the mining industry appears assured of a practically unlimited field of operation for many years to come, and differing from many basic industries it is not seasonal in its operation, but can be carried on irrespective of

climatic conditions.

A similar recounting of advancement and opportunity will within a few years be told of agricultural development in the great Clay-belt area, comprising millions of acres of rich clay loam. This area holds a future for farming greater than is dreamed of by the most optimistic. New land is yearly being brought under cultivation for general farming and stock raising purposes, and as this increases, added traffic is brought to the Railway.

The Government of the Province is lending its best energies to the upbuilding of the North Country as a whole, and to that part served by the Temiskaming

and Northern Ontario Railway in particular.

Because of the continued policy of increased branch line construction and extension generally, the mining areas and general industries served, have been brought into close proximity with the business and financial centres of Canada and the United States. All-steel trains of most modern construction and operation maintain a daily service over the entire system to serve the require-

ments of the travelling public in full, and the consequent ease and comfort of travel has materially assisted in the general prosperous condition of the territory within its influence.

The results of operation of the Temiskaming and Northern Ontario Railway during fiscal year 1926 have been eminently successful, showing increased gross and net revenues and decreased expenditures:

Compared with 1925 the accounts are as follows:

Revenue—Transportation Revenue—Incidental	1926 \$4,590,859 73 254,092 02	1925 \$4,578,517 29 231,904 42
Increase, 1926	\$4,844,951 75	\$4,810,421 71 34,530 04
Expenditures—OperatingOther expenditures	\$3,612,371 80 249,616 00	\$3,857,592 27 172,843 55
Decrease, 1926	\$3,861,987 80 168,448 02	\$4,030,435 82
Net earnings	\$982,963 95	\$779,985 89 202,978 06

Thus revenue from all sources in 1926 shows an increase of \$34,530.04, as compared with 1925 (0.7.2 per cent.), and gross expenditures for 1926 a decrease of \$168,448.02 (4.18 per cent.), resulting in an increased net revenue of \$202,978.06 (26 per cent.) for 1926 as compared with previous fiscal year.

For the past two years the Commission have directly undertaken all necessary financing for capital expenditure and construction for the Temiskaming and Northern Ontario Railway—and also for its subsidiary, the Nipissing Central Railway—bearing such interest charges as contracted and paying for same

from its operating revenue.

In authorization thereof Bill No. 61, "An Act to amend the Temiskaming and Northern Ontario Railway Act," was passed by the Legislature in 1925, wherein Commission is henceforth empowered to borrow money from time to time for the construction of its railway; and the purchase of rolling stock and other equipment therefor, and to issue bonds, debentures, notes or other securities to provide for the repayment of any moneys so borrowed.

Insurance against fire loss has been carried to the extent of \$3,400,000.00. In conclusion the Railway is in an excellent financial and physical condition.

GEO. W. LEE, Chairman.

AUDITOR'S REPORT

Toronto 2, Ontario, December 20th, 1926.

GEORGE W. LEE, Esq.,

Chairman, Temiskaming and Northern Ontario Railway Commission, North Bay, Ontario.

Dear Sir,—

Acting under instructions from the Commissioners, we have conducted an audit of the Treasurer's accounts for the year ending October 31st, 1926, and have satisfied ourselves that all receipts have been properly accounted for and that satisfactory vouchers are on hand to cover disbursements. We have checked the balances in the hands of the Treasurer and find them to be in agreement with the accounts as shown by the general ledger.

The accounts of the Treasurer are in good order and well kept. All information asked for has been cheerfully given. We also wish to acknowledge the

courtesies of the Commission and its employees at all times.

Yours very truly,

(Sgd.) EDWARDS, MORGAN & Co.

Twenty-First Annual Report

OF THE

ONTARIO RAILWAY

AND

MUNICIPAL BOARD

To December 31st, 1926

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY OF ONTARIO

TORONTO

Printed and Published by the Printer to the King's Most Excellent Majesty
1927

TWENTY-FIRST ANNUAL REPORT

OF THE

Ontario Railway and Municipal Board

to December 31st, 1926

TO THE HONOURABLE WILLIAM DONALD Ross,

Lieutenant-Governor of the Province of Ontario in Council.

MAY IT PLEASE YOUR HONOUR:

The undersigned has the honour to transmit herewith the Twenty-first Report of The Ontario Railway and Municipal Board for the year ending December 31st, 1926.

Respectfully submitted,

Parliament Buildings, Toronto. WILLIAM H. PRICE, Attorney-General.

In pursuance of Section 57 of "The Ontario Railway and Municipal Board Act," the Ontario Railway and Municipal Board beg leave respectfully to submit their Twenty-first Annual Report.

SITTINGS OF THE BOARD

The Board held meetings for the transaction of routine business every juridical day throughout the year. The record of the sessions of the Board and an abstract of the proceedings, together with the Judgments or Opinions of the Board, appear in the Appendix.

In this connection it should be stated that about 80 per cent. of the Board's work is not conducted at the formal sessions of the Board shown in the abstract of proceedings above mentioned. This office work of the Board is transacted usually upon written applications and not in the way of formal hearing of parties interested. A classified abstract of the office work of the Board disposed of in the way of formal applications without hearing the parties will be found in the Appendix. In addition to this there is the usual office work of considering and replying to enquiries and other routine correspondence. A short reference is hereafter made, under different sub-headings, of the applications dealt with by the Board "ex parte" or without a formal hearing of the parties interested.

Applications to the Board

There were 554 formal applications made to the Board in 1926. Of the formal applications all those in which the parties were ready to go to trial have been heard and disposed of, except in a few cases where adjournments were granted to the parties at the request of counsel or in order to procure further evidence or to obtain reports from experts in connection with technical matters in question.

Some of the formal applications are still standing for trial, but the parties are not yet ready to go to trial, as in the more important matters the parties interested are showing an increasing disposition to take advantage of the opportunities afforded them by the Board's rules for obtaining discovery and production, thus, to some extent, delaying the final dates of the hearing of the applications, but in reality facilitating the final disposition at the hearings of all the matters in question between the parties.

LAW STAMPS

The amount of revenue collected by the Board in Law Stamps in the year 1918 was \$3,939.40; in 1919, \$4,674.00; in 1920, \$6,957.50; in 1921, \$8,063.50; in 1922, \$9,302.00; in 1923, \$10,866.00; in 1924, \$10,743.00; in 1925, \$7,262.00; and \$5,542.50 in 1926. The decrease in 1925 and 1926 is due principally to the drastic curtailment by municipalities of their debenture issues, as will appear more fully by reference to subsequent paragraphs of this Report under the headings, "Validation of Municipal Debentures," and "Extensions of Municipal Utilities approved under subsection (3) of section 400 of 'The Consolidated Municipal Act, 1922'."

Provincial Railways

An alphabetical list (under the names of the railway systems affected) of applications to the Board during 1926, affecting Provincial Railways, is contained in the Appendix to this Report.

Extensions of and improvements to Provincial Railways during 1926, as reported to the Board, will be found in the Appendix (arranged alphabetically)

under the names of the several systems reporting.

A tabulation (arranged alphabetically) of Railways under the Board's jurisdiction, will be found in the Appendix. This tabulation shows, for each railway, the lengths of first and second main track, total main track, sidings and turnouts, the total computed as single track, the length under construction, the number of power houses and whether steam or water and whence power obtained.

There will be found in the Appendix an analytical tabulated summary of Accident Reports received by the Board for 1926; also a continuation (up to

and inclusive of 1926) of the Board's index to Railway Legislation.

The Appendix also contains tables showing provincial aid to railways since Confederation, and an index to Legislation, Dominion and Provincial, since 1867, affecting Railways in Ontario.

REPORTS TO THE HOUSE

In pursuance of Rule 61a of the House, the Board made enquiry into and reported upon two financial Bills which were introduced last session into the Legislature. A list of the Bills so reported will be found in the Appendix.

Annexations of Territory

There were six applications made in 1926 by cities, towns, villages and townships for annexation of additional territory thereto. An alphabetical list of annexation applications is contained in the Appendix.

VALIDATION OF MUNICIPAL DEBENTURES

(Section 295 of "The Consolidated Municipal Act, 1922.")

There were 82 applications to the Board under the above legislation in 1926, involving debentures of a total value of \$2,689,309.24. Acting under the powers conferred by the above legislation, the Board was able to grant relief in nearly all these cases, included in which were more than 55 by-laws affected by irregularities which would otherwise have probably required special Acts of the Legislature to make the debentures valid and saleable.

Municipalities are showing an increasing disposition to have their by-laws and debentures validated under said section 295, even in cases where no irregularities occur requiring the curative powers of the Board thereunder, as they have found that such validation facilitates the marketing of their debentures.

The amount of debentures validated by the Board during 1908 was over \$840,000; during 1909 over \$1,326,000; in 1910, over \$718,000; in 1911, over \$1,350,000; in 1912, over \$1,330,000; in 1913, over \$2,990,000; in 1914, over \$3,071,000; in 1915, \$4,172,912.01; in 1916, \$2,289,744.20; in 1917, \$1,538,689.99; in 1918, \$5,273,742.43; in 1919, \$2,209,589.99; in 1920, \$4,359,538.05; in 1921, \$5,297,925.75; in 1922, \$6,046,223.10; in 1923, \$6,061,954.16; in 1924, \$7,341,426.33; in 1925, \$4,544,784.49—a total to the end of 1926 of over \$61,000,000. An alphabetical list of these applications filed in 1926 is given in the Appendix and will be found indexed under the word "Validation."

Assessment Appeals

There were seven assessment appeals to the Board during the year 1926. The assessed value of the property affected by these appeals was over \$2,544,000. An alphabetical list of these assessment appeals is contained in the Appendix.

RAILWAY RETURNS

Annual Reports to December 31st, 1926, by Railway Companies under the Board's jurisdiction were received, of which a summarized tabulation has been prepared for publication herein, and will be found in the Appendix. The Board has no means of auditing the reports as received and does not therefore represent or guarantee that the figures taken therefrom are correct or accurate. Heretofore these reports were copied and tabulated as received and published in the Board's Annual Report; this practice was discontinued for the first time in 1924.

ACCIDENTS

A tabulated summary of Accident Reports received by the Board from Provincial Railways during the year 1926 appears in the Appendix and shows that 30 persons were killed and 710 injured during the year.

In 1908, 26 persons were killed and 391 injured; in 1909, 16 were killed and 340 injured; in 1910, 34 were killed and 399 injured; in 1911, 33 were killed and 541 injured; in 1912, 25 were killed and 537 injured; in 1913, 13 were killed and

710 injured; in 1914, 12 were killed and 613 injured; in 1915, 30 were killed and 612 injured (this included 15 killed and 144 injured in accident at Queenston, on July 7th); 13 were killed and 356 injured in 1916; 27 fatal and 377 other personal accidents in 1917; 22 persons were killed and 426 injured during 1918; in 1919, 24 persons were killed and 507 injured; 16 were killed and 473 injured during 1920; 10 persons were killed and 270 injured in 1921; in 1922 there were 20 persons killed and 353 injured; in 1923, 18 persons were killed and 592 injured; and in 1924, 18 persons were killed and 634 injured; and in 1925, 17 persons were killed and 666 injured.

ONTARIO SAFETY LEAGUE

Early in 1913 the members of the Board called together representatives of various organizations which were specially interested in the question of street traffic. Representatives were sent from the Board of Trade, Canadian Manufacturers' Association, City Council, Ontario Motor League, Board of Education, Separate School Board, Toronto Railway Company, Toronto District Labour Council, Boy Scouts, Team Owners' Association, and many others. Every delegate realized that the question was one that dealt with actual dangers to which the public was constantly exposed, and each agreed that some definite and concerted action must be taken. After numerous conferences the Ontario Safety League was organized on the 17th September, 1913. The League has since done much good and vitally useful work towards lessening the dangers of travel, especially on congested highways.

In addition to its Provincial Organization, the League has become National in its organization and operations. See summary of the League's 1926 campaign which appears in the Appendix.

PLANS

(Plans of Land Subdivisions)

Under "The Planning and Development Act" (Chapter 38, 1918), "The Land Titles Amendment Act, 1917," and "The Registry Act," the Board considered during the year 44 applications for approval of plans. An alphabetical list of owners of the lands subdivided by these plans will be found in the Appendix.

In 1912, 154 such applications were considered; 213 in 1913; 137 in 1914; 38 in 1915; 18 in 1916; 45 in 1917; 42 in 1918; 51 in 1919; 111 in 1920; 89 in 1921; 99 in 1922; 100 in 1923; 89 in 1924; and 59 in 1925.

FORMS

The Board has (for distribution to parties interested) the following forms and specifications, namely:

(1) The Board's Rules of Practice, Specifications and Practice Forms.

- (2) Standard Specifications for Bridges, Viaducts, Trestles or other structures.
- (3) Pamphlet containing copy of "The Ontario Telephone Act, 1918," and with information regarding Provincial Telephone Systems.

(4) Specifications for Local Municipal Telephone Systems.(5) Forms under "The Planning and Development Act."

(6) Forms for submission of a by-law or question to a poll under "The Municipal Act."

(7) Forms of affidavits in support of applications under section 295 of "The Municipal Act."

(8) Preliminary Resolution under section 9 of "The Local Improvement

Act.''

(9) Form for Return by Municipality operating a Telephone System. (10) Form for Return by Company, etc., operating a Telephone System.

(11) Form for Tariff of Tolls for Telephone System.

- (12) Forms for Annual Reports by Railway Systems.
- (13) Forms for Reports as to Examination of Motormen.

(14) Forms for Reports of Accidents by Railway Systems.

(15) Regulation as to height of car steps.

(16) Directions for guidance of Applicants under subsection (3) of section 400 of "The Municipal Act."

(17) Tariff of the Board's Fees.

(18) Directions for guidance of Applicants under "The Planning and Development Act."

Extensions of Municipal Utilities Approved under Subsection (3) of Section 400 of "The Consolidated Municipal Act, 1922"

An alphabetical tabulation (under names of Municipalities) of extensions to public utilities made by Municipalities, and approved by the Board under the above subsection (3), will be found in the Appendix and is indexed under the word "Approval."

The total of the debenture by-laws approved in 1918 to pay for these extensions was \$1,193,503; in 1919, \$1,930,158; \$1,733,109 in 1920; \$2,921,292.51 in 1921; \$5,782,578.72 in 1922; \$3,984,022.75 in 1923; \$9,439,982.18 in 1924; \$1,347,941.30 in 1925; and \$2,378,030.70 in 1926. This, of course, does not cover extensions made under By-laws approved by the ratepayers, but only under By-laws approved by the Board under the above subsection (3).

MISCELLANEOUS MATTERS UNDER THE BOARD'S JURISDICTION

A classified analysis of miscellaneous matters dealt with under the jurisdiction of the Board will be found in the Appendix. These include Annexations under the Municipal Act; Arbitrations; Assessment Appeals under section 80 of "The Assessment Act"; Restrictions as to use of land or buildings, etc., approved under section 399a of "The Consolidated Municipal Act, 1922"; Financial and other Bills reported to the House under Rule 61a; Bridges, relief from reconstruction of, Section 460 (9) of the Municipal Act; Cemeteries, incorporation of additional land in, etc., under section 40 (a) of "The Cemetery Act," as enacted by section 2 of "The Cemetery Amendment Act, 1921"; County Road, abandonment of part of, section 448 of the Municipal Act; Detachment of farm lands from Town or Village, section 21a of the Municipal Act; Extension of Debenture Issue Period under subsections (9) and (10) of section 288 of the Municipal Act; Extension of time to pass By-laws, under section 280 (5) of the Municipal Act; Applications under the (Municipal) Franchises Act (Chapter 197, R.S.O.); Fuel, Municipal dealings in, under section 399 (39a) of the Municipal Act; Highways (narrow) approved under section 479 of the Municipal Act; Interest Decrease By-laws, approval of under section 291 of the Municipal Act; Interest Increase By-laws, approval of under section 291 of the Municipal Act; Legislation (Special) approval of By-laws under; Local Improvements, Petitions against, under section 9 of "The Local Improvement Act"; Local

Improvements—part only of work—approval of By-laws under section 18a of "The Local Improvement Act"; "Northern Fire Relief Act," applications under; "The Ontario Railway and Municipal Board Act" (Chap. 186, R.S.O.), applications under; Parks, setting aside of, for athletic purposes, under section 13 of "The Public Parks Act" (Chap. 203, R.S.O., 1914); Repeal of Money By-laws as to residue not raised, under section 292 of the Municipal Act; Restricted Areas, approval By-laws establishing, under section 399a of the Municipal Act, and repeal (in part) of restricted areas under subsection (2b) of said section 399a; Sewage and Sewage Disposal Works, applications for directions and compensation in respect of, under section 94 of "The Public Health Act," as amended; Sewerage Areas, approval of, under special legislation; Sinking Funds, investment of, under section 303 of the Municipal Act; "The Suburban Area Development Act, 1921" (Chapter 66, Ontario Statutes, 1921, section 7), approval Agreement under; Tax Rate, approval of further debt, under section 297 (2) of the Municipal Act (as amended by section 3, Chapter 53, Ontario Statutes, 1924); Towns erected into Cities, under section 20 of the Municipal Act; (Police) Villages, formation of, under section 502 (3) and 504a of the Municipal Act; Wards, Division of Cities, etc., into, under section 44 of the Municipal Act; Waterworks Areas and construction (special legislation); Weigh Scales and weighing of coal, etc., approval of By-laws under section 401 (13) of the Municipal Act.

PUBLIC UTILITIES

We have the honour to submit analyses of Report for the year ending. December 31st, 1926, upon railway operation in the Province of Ontario under the jurisdiction of the Board.

We also submit six tabulated analytical statements prepared from the Annual Reports received from Provincial Railways, and showing the financial position and the operating details of such railways for the year 1926.

H. C. SMALL,

March 28th, 1927.

Secretary.

1

REPORT OF THE SUPERVISOR OF TELEPHONE SYSTEMS FOR THE YEAR 1926 The following applications under the provisions of "The Ontario Telephone Act, 1918," were dealt with by the Board in 1926: Under Section 3c: For authority to issue debentures for extensions and improvements to Telephone Systems under Part I..... 1 Under Section 11: For authority to extend a municipal telephone system into another township...... 1 Under Section 13: For the approval of municipal by-laws providing for the establishment of telephone systems..... 1 Under Section 18: For the approval of municipal debenture by-laws to meet the cost of establishing or extending telephone systems..... Under Section 19: For an extension of the period within which municipal debenture by-laws respecting telephone systems may be passed..... 6 Under Section 20: For an extension of the period within which to repay the cost of establishing a municipal telephone system..... 1 Under Section 21: For authority to pass municipal debenture by-laws to

meet the cost of reconstructing, replacing or altering telephone systems

Under Section 67: For the approval of municipal by-laws granting the right to erect poles and wires upon the highways	Under Section 24: For the approval of the purchase of an existing telephone system by a municipality	2

	Under Section 94: For authority to issue stock and bonds	3 1

The Board or its Supervisor of Telephone Systems during the year visited eighty-nine different points in the Province in connection with the foregoing applications.

Total number of applications.....

The continued policy of the Board in endeavouring to secure an amicable settlement of matters in dispute between the applicant and respondent has, with the assistance of the Board's Supervisor, proved successful in the majority of such cases.

In addition to the applications and complaints referred to, a vast amount of correspondence relating to telephone matters has been dealt with by the Board's Supervisor, through the medium of which much information and assistance has been given to municipalities, companies, and other persons interested, and many difficulties that might otherwise have necessitated a formal application and public hearing have been satisfactorily adjusted.

A number of points were visited by the Board's Inspector of Telephone Service during the year for the purpose of investigating complaints made by subscribers, and upon his report and recommendation the Board has been enabled to secure considerable improvement in the telephone service furnished by the systems coming under his observation.

The number of telephone systems within the jurisdiction of Ontario of which the Board has record is six hundred and twenty-six, operating approximately 109,600 telephones and representing an investment of about \$10,150,000.

There are ten systems owned and operated by municipalities under the provisions of Part I of the Act, viz.: the cities of Fort William and Port Arthur, the towns of Cochrane, Dryden, Fort Frances, Kenora and Rainy River, and the townships of Alberton, Caledon and Hilliard.

One hundred and fifteen systems are now established and operating under Part II of the Act and furnishing service in two hundred and sixty towns, villages

and townships.

The cordial relations which continue to exist between the telephone systems under the jurisdiction of Ontario and the Bell Telephone Company of Canada is a source of much satisfaction to the Board. During the year that company has sold plant to the value of \$44,635.00 and transferred 605 subscribers to systems within the control of the Board and has purchased plant to the value of \$13,985.00 and acquired 273 subscribers. These changes have been made with the object of adjusting territory in order to improve telephone facilities and avoid unnecessary duplication in the districts affected. The result of these adjustments has been a net gain to the provincial systems of 332 telephones and an increased investment of \$31,650.00.

Detailed statistics and other information relative to these systems will be found in the appendix to this report entitled "Telephone Systems, 1927."

March 25th, 1927.

F. Dagger, Supervisor of Telephone Systems.

APPENDIX

PROCEDURE FILE 9010A

Application by the City of Toronto, under subsection (2b) of section 399a of "The Consolidated Municipal Act, 1922," for approval of its By-law No. 9920 amending its Restricted Area By-law No. 9188 (St. George Street-Bloor Street to Dupont Street) by excepting therefrom Lot No. 33, Plan 578.

April 30th. Application for re-hearing filed.

June 8th. Hearing 11 a.m. to 2 p.m. and 4 to 4.50 p.m., at Board's Chambers. (Copy of By-law 535 [8th May, 1905] of City of Toronto, to be filed by Applicants.) Application dismissed. Applicant to pay Law Stamp, \$15.00.

Judgment

8th June, 1926.

(Extract from Notes of Court Reporter)

The Vice-Chairman: The Board have listened for some considerable time to this application, and have endeavoured to weigh carefully everything that has been said, both for and against the proposed amendment to the by-law. It has been the practice of the Board in similar applications to limit the flankage to much less than 200 feet. In this case the flankage was limited to 200 feet on St. George Street.

Reference has been made to the action of the City Council. I think the City Council is largely governed by policy in the manner in which they deal with matters of this kind. The City Council may consider the importance to the City of an increased assessment, but in dealing with a by-law of this character

the Board are not concerned with the assessment, but the Board are concerned with the statute under which we act. That statute requires certain things to be done in order to give the Board jurisdiction to approve of the by-law.

In this case we are of the opinion that there have not been changes sufficient to warrant the Board in giving its approval to the changes from 200 feet flankage

on St. George Street to 247 fect on St. George Street.

Much as it may be regretted that is the position we find ourselves in and that is our judgment.

Commissioner Ellis: We are bound by the Statute. The City Council have a much wider scope than we have, but when the matter comes to us for approval, then the conditions of the statute apply, and we are bound by them.

The Vice-Chairman: A previous ruling by the Board rather ties our hands. In the Gooderham application I thought some changes might not be a material damage to the street, but my opinion was overruled. In giving judgment at that time the Board set down a ruling, and we must adhere to it.

There will be a law stamp charged to the applicant in this case of \$15.

Adjourned.

PROCEDURE FILE 9312. P. 472

In the matter of the application of the Corporation of the Town of Mimico, under section 120 of "The Ontario Railway Act," for approval of plan of crossing of the Hydro-Electric Railway (Mimico Division) at Allan Avenue, in the said town.

Nov. 3rd. Order.

November 3rd, 1926.

ORDER

Upon the application of the said corporation, and upon reading the consent of the Ontario Department of Highways and of the Hydro-Electric Power Commission of Ontario, and the other material filed, and upon consideration of the plan submitted,

The Board orders, under and in pursuance of the provisions of section 120 of "The Ontario Railway Act," that the said plan of the crossing of the Hydro-Electric Railway (Mimico Division) at Allan Avenue, in the said Town of Mimico, be and the same is hereby approved, provided however that such crossing, including any such alterations of the overhead construction as may be made necessary owing to the construction of the crossing, be made entirely at the expense of the applicant, the Corporation of the Town of Mimico, and that the said corporation shall bear the cost of the future maintenance of the same.

(Sgd.) A. B. Ingram, Vice-Chairman.

(Seal)

Procedure File 9405

Application by the Town of Napanee, under section 401 of "The Consolidated Municipal Act, 1922," for approval of its By-law No. 1182, as amended by its By-law No. 1183, to provide for the weighing of coal and coke.

April 7th. Application renewed.

April 30th. Hearing, pursuant to appointment, 1 to 3 p.m., Council Chamber, Napanee. Mr. Commr. Ellis authorized under section 9, Chapter 186, R.S.O.) Judgment reserved for two weeks. (See Reporter's Notes.)

May 13th. New By-law filed.

May 17th. Report of Mr. Commr. Ellis filed and adopted.

May 19th. Application for approval of By-laws 1182 and 1183 withdrawn. New by-law does not need Board's approval.

REPORT

At the hearing it was suggested that the matter might be considered by the Town Council after hearing the coal dealers. This has been done and the Town Clerk, by letter dated 12th May, 1926, advises that By-laws 1182 and 1183 (application for approval of which was made to the Board) are not to be further proceeded with. A new by-law is to be passed, apparently under the provisions of section 401 (6) of the Municipal Act. This does not require the approval of the Board.

There does not appear to be any further action required by the Board, except to advise the Clerk to this effect.

No law stamps to be charged.

Toronto 17th May, 1926.

(Sgd.) J. A. Ellis, Commissioner.

Adopted.

(Sgd.) A. B. Ingram,
Vice-Chairman.

PROCEDURE FILE 9815

Application by the Town of Fort Frances, under section 25, Chapter 186, R.S.O. (1914), for amendment of Board's Order of June 16, 1914 (P.F. 2388, p. 197)—Change of boundary of the said town.

Jan. 21st. Order.

January 21st, 1926.

Order

Upon the application of the said Corporation, and upon reading the notice of application, the statutory declarations, affidavits and statement of John William Walker, Clerk of the said Municipality, and upon the consent of the Ontario and Minnesota Power Company, the Township of McIrvine, and the Department of Indian Affairs, hereto annexed:

The Board orders and proclaims that Order P.F. 2388, p. 197, be and the same is hereby varied in respect of the description of the lands annexed to the Town of Fort Frances by striking out the description of the same contained in the said Order from the word "Commencing" down to and including the words

"4th day of March, 1914," and substituting therefor the words:

"Commencing at a point at the low-water mark of the Rainy River where an iron post has been planted, said point being the southwesterly angle of the limits of the said Town of Fort Frances as defined by the Proclamation of Incorporation of said town dated the 3rd day of April, 1908; thence southwesterly to a point opposite the centre of the channel between two islands in the Rainy River; thence in a southeasterly direction through the centre of the channel between the said islands to the international boundary line between Canada and the United States of America; thence northerly and easterly up the stream of the said Rainy River and along the said International boundary to the point of intersection of the same by the bridge of the Canadian National Railway (also

known as the Duluth, Winnipeg and Pacific Railway); thence northerly and westerly on a course parallel to the shore line of the said Pither's Point and Government Reserve at a distance of three hundred feet from low-water mark to the production easterly of the northerly boundary of the portion of the said Government Reserve shown on the map or plan hereto annexed, marked Exhibit "B" and shown as the north boundary of Pither's Point Park; thence west astronomically along the said easterly production of the said last mentioned boundary twenty-six chains to the west boundary of Indian Reserve No. 1; thence south along said west boundary nineteen chains fifteen links more or less to the northerly limit of the colonization road; thence westerly and southerly along the northerly limit of the said colonization road to the point of intersection therewith of the present northerly town limits; thence easterly across said colonization road to an iron post planted at the northeasterly limit of the said town boundaries as defined by the said Proclamation of Incorporation; thence southerly, westerly and northerly along the low-water mark of the said Rainy River to the place of beginning, said lands and land covered with water being coloured yellow and the said map or plan hereto annexed drawn by C. E. Parry, Civil Engineer, and dated the 4th day of March, 1914 (but omitting from the said coloured portion the north eleven chains forty-seven links of Government Reserve)."

(Sgd.) A. B. Ingram, Vice-Chairman.

PROCEDURE FILE 9836

Application by the City of Toronto, under section 325a (3) of "The Consolidated Municipal Act, 1922," for leave to repeal its By-law No. 9416, being a by-law to authorize the widening of Bloor Street from Sherbourne Street to Spadina Road.

Mar. 10th. Appellate Division's judgment, giving successful appellant

cost before Board. (30 O.W.N. 21).

May 25th. Hearing, pursuant to appointment, 11 a.m. to 12 m., at Board's chambers, to settle Order and discuss procedure for appointment of arbitrator. Mr. O'Brian to draft Order and submit to counsel present for approval. Mr. O'Brian to publish once a week in two Toronto newspapers notice in form as now drafted of appointment to consider appointment of arbitrator. (Appointment June 1st, at 2.30 p.m.)

June 1st. Hearing (re appointment of arbitrator), 2.30 to 3 p.m., at Board's chambers, pursuant to appointment. Board will consider nominations

and announce its choice (possibly to-morrow morning).

June 1st. Order, dated May 25th, 1926, vacating and setting aside Board's Order of 21st May, 1925, and as to costs incidental to appeal from said Order) issued. Judgment of Appellate Division re costs before the Board reported in 58 O.L.R., 511.

June 3rd. Order, appointing Right Honourable Sir William Thomas White, K.C.M.G. (of City of Toronto) to be one of the board of three arbitrators

to determine compensation herein.

May 25th, 1926.

ORDER

Upon the application of James Wood, Union Investment Company Limited, and other property owners affected by the by-law above referred to, and upon

hearing read the opinion of the First Divisional Court of the Appellate Division of the Supreme Court of Ontario, certified to this Honourable Board, and dated the 21st day of December, 1925, and upon hearing what was alleged by counsel for the said parties, and for the City of Toronto:

(1) This Board doth order that the Order of the Ontario Railway and Municipal Board herein, dated Thursday, the 21st day of May, 1925, allowing the application of the said corporation of the City of Toronto be, and the same is

hereby vacated and set aside;

(2) And this Board doth further order that the Corporation of the City of Toronto pay to the applicants their costs on the Supreme Court scale, of and incidental to the appeal from the said Order of this Board, including the application for leave to appeal and to the proceedings before the Board forthwith after taxation thereof by the Taxing Officer at Toronto, only one bill of costs before the Board to be taxed.

(Sgd.) A. B. Ingram,

(Seal)

June 3rd, 1926.

Vice-Chairman.

Order

Upon the application of the said applicants, and the Board having appointed the first day of June, 1926, to hear all parties interested as to the appointment of an arbitrator by the Board, and notice having been duly given of such appointment as directed by the Board, in the presence of counsel for the City of Toronto and for owners of property affected, and upon consideration of the recommendations by counsel for appointment of such arbitrator, and the name of the Right Honourable Sir William Thomas White, K.C.M.G. (a resident of the said city) having been suggested by the majority of counsel appearing before the Board, and the Board having reserved such appointment until this day,

The Board orders, under and in pursuance of clause (d) of subsection (11) of section 325a of "The Consolidated Municipal Act, 1922," that the Right Honourable Sir William Thomas White, K.C.M.G., of the City of Toronto, in the Province of Ontario, one of His Majesty's counsel, learned in the law, be and he is hereby appointed to be one of the Board of three arbitrators to determine

the compensation herein.

Vice-Chairman.

PROCEDURE FILE 9852

Application by the Hazeldean Rural Telephone Co. Ltd., under section 88 of "The Ontario Telephone Act, 1918," for approval of charges for service.

Feb. 26th. Hearing, pursuant to appointment, 11 a.m. to 12 m., Court House, Ottawa. (Mr. Commissioner Ellis, authorized under section 9, Chap. 186, R.S.O.)

Mar. 4th. Report of Mr. Commissioner Ellis filed and adopted.

Mar. 4th. Order.

REPORT

The undersigned, having heard the evidence of all parties relative to this application, recommends that the annexed Order be adopted as the Order of the Board.

(Sgd.) J. A. Ellis,

Toronto, March 4th, 1926.

Commissioner.

March 4th, 1926.

Order

In the matter of the application of the Hazeldean Rural Telephone Company, Limited, for the approval of the following charges for service:

For Local or Rural Service:

To Shareholders holding not less than two shares of stock. \$15.00 per annum For an extension bell on the same premises \$1.20 per annum And also, for the approval of an installation charge of \$2.50.

Upon the application of the above-named applicant, upon reading the report of J. A. Ellis, Esquire, Commissioner, who heard the evidence adduced on behalf of all parties, statements of assets and liabilities, receipts and disbursements and other material filed,

The Board orders that the applicant, the Hazeldean Rural Telephone Company, Limited, be authorized to charge the following rates for telephone service, to take effect as from January 1st, 1926:

For Local and Rural Service:

upon which the first telephone is installed:

And the Board further orders that the charges for telephone service levied and collected by the applicant prior to the date of this Order shall be deemed to have been lawfully levied and collected and are hereby validated and confirmed.

And the Board further orders that the installation charge of \$2.50 proposed by the applicant be not approved.

And the Board makes no order for costs save and except that the applicant shall pay \$10.00 for the law stamps required for this Order.

(Sgd.) A. B. Ingram, Vice-Chairman.

Procedure File 9912

In the matter of the application of J. A. McDonald and others, under section 21a of "The Consolidated Municipal Act, 1922," for detachment of certain farm lands from the Village of Bayfield and the annexation of same to the Townships of Stanley and Goderich.

Mar. 29th. Approved draft Order filed.

Mar. 29th. Order issued.

November 11th, 1925.

Order

This application having come on for hearing this day before A. B. Ingram, Esquire, Vice-Chairman, and J. A. Ellis, Esquire, Commissioner, in the presence of W. Brydone, of counsel for the applicants, and R. C. Hays and L. E. Dancey, of counsel for the respondents.

(1) It is ordered that all and singular that certain parcel or tract of land and premises, situate, lying and being in the Township of Stanley, in the County of Huron, being composed of Ranges A. B. C. F. G. H. I. K. and L. and parts of Ranges D, F, and M of the Bayfield Town Plot, containing by admeasurement twelve hundred (1,200) acres, be the same more or less, and which said parcel is more particularly described as follows:

Commencing on the easterly limit of Lot Number Fourteen (14) of said Range A of the said Bayfield Town Plot, at a point where the said limit reaches the Bayfield River, thence southerly along the easterly limit of said Ranges A. B. C. D. E. F and G, to the southeasterly angle of said Range G; thence westerly along the southerly limits of said Ranges G, H, I, K, L and M, to a point in the easterly shore of Lake Huron, thence northerly along the said easterly shore of the said Lake Huron following all the windings and turnings thereof to the northwesterly angle of Lot Number Six (6) of said Range M; thence easterly along the northerly limit of said Lot Number Six (6) of said Range M, and the production easterly thereof to a point in the westerly limit of said Range L; thence northerly along the said westerly limits of said Range L to the northwesterly angle thereof, thence easterly along the northerly limits of said Ranges L, K and the production easterly thereof to a point in the westerly limit of said Range F; thence northerly along the said westerly limit of said Range F to the northwesterly angle thereof; thence easterly along the northerly limit of said Range F to a point in the production southerly of the westerly limit of Lot Number Three (3) of said Range E; thence northerly along the said westerly limits of said Lot Number Three (3) of said Range E and Lot Number Three of said Range D to a point in the northerly limit of said Range D; thence westerly along the said northerly limit of said Range D to the northwesterly angle thereof; thence northerly along the westerly limit of said Range A, being also the easterly limit of Sarnia Street, to the said Bayfield River; thence easterly along the said Bayfield River, following all the windings and turnings thereof to the place of beginning; save and except that parcel or tract of land and premises conveyed to the Bayfield Cemetery Company, being composed of part of Lot Number Five (5), part of Lot Number Six (6) and Lot Number Seven (7) of said Range D, and part of Lot Number Six (6) of said Range E, more particularly described as follows:

Commencing at the northeasterly angle of said Lot Number Seven (7) of said Range D; thence southerly along the easterly limit of said Lot to the southeasterly angle thereof; thence westerly along the southerly limit of said lot to the southwesterly angle thereof; thence southerly along the easterly limit of said Lot Number Six (6) of said Range E, a distance of fifty-seven feet; thence westerly parallel to the northerly limit of said lot three hundred and nineteen (319) feet to a point in the westerly limit thereof; thence northerly fifty-seven feet to the northwesterly angle of said lot; thence westerly along the southerly limit of said Lot Number Five (5) of said Range D twenty feet and five inches (20′ 5″); thence northeasterly fifty-one feet and six inches (51′ 6″) to a point in the easterly limit of said lot distant forty-eight feet and two inches (48′ 2″)

measured northerly from the southeasterly angle of said lot; thence northerly along said easterly limit of said lot to the northeasterly angle thereof; thence easterly along the northerly limits of said Lots Numbers Five and Six of said Range D to the place of beginning, together with a right of way over, along and upon the westerly eight feet of said Lot Number Six (6) of said Range E and excepting therefrom firstly that portion of said Lot Number Six (6) of said Range D heretofore conveyed for use as a deviation road, and secondly that southwesterly parcel of said Lot Number Six (6) of said Range D described in instrument number four hundred and fifty-six (456), be and the same are hereby detached from the Village of Bayfield and annexed to the Township of Stanley.

(2) It is further ordered that all assets and properties heretofore vested in the Corporation of Bayfield continue to be the property of the said corporation.

(3) It is further ordered that all liabilities of the said Corporation existing on the 31st day of December, A.D. 1925, shall be assumed and paid by the Corporation of the Village of Bayfield and that the said detached lands shall be released and discharged from the said liabilities and every claim and demand in respect thereof.

(4) This order shall be deemed to come into and be of full force and effect on and after the first day of January, one thousand nine hundred and twenty-six.

(Seal)

(Sgd). A. B. Ingram, Vice-Chairman.

PROCEDURE FILE 9979

In the matter of the application of W. B. Chute and others, under Section 21a of "The Consolidated Municipal Act, 1922," for the detachment from the Village of Vienna of the lands described in Schedule "A" hereto, and the annexation of the same to the Township of Bayham.

Apr. 30th. Approved draft Order filed.

May 5th. Order issued.

June 30th, 1925.

Order

- 1. This application coming on this day for hearing, pursuant to appointment, at the Court House, in the City of St. Thomas, before Mr. A. B. Ingram, Vice-Chairman of the Board (authorized under Section 9, Chapter 186, R.S.O.), in the presence of Counsel for the Applicants and for the Corporation of the Village of Vienna, and the Township of Bayham consenting thereto, and in the presence of various residents of the said Village of Vienna; upon hearing read the said application and exhibits filed, and hearing the evidence adduced and what was alleged by Counsel aforesaid; and upon consideration of the Report of the said Vice-Chairman on such hearing filed, which Report has been adopted as the basis of the Board's Order herein.
- 2. This Board doth order that the lands now situated in the Village of Vienna described in Schedule "A" hereto annexed be and the same are hereby detached from the Village of Vienna and the said lands are hereby annexed to the Township of Bayham.
- 3. This Board doth further order that, until other disposition is made by competent authority, the said lands shall continue to form a part of School Section under the Board of Education of the Village of Vienna, and shall pay the same rates for school purposes that are paid by other lands in the Village of Vienna which form part of the said School Section.

- 4. This Board doth further order that the Corporation of the Township of Bayham shall assess against the said lands described in Schedule "A" in proportion to their respective assessments the sum of \$126.56 during the year 1926, being the amount which we find should be paid by the owners of said lands as their share of the outstanding indebtedness of the said Village of Vienna, and said amount shall be collected by said Township of Bayham in the same manner and at the same time as municipal taxes of the said Township, and the said sum shall be paid over by the Corporation of the said Township on or before the thirty-first day of December 1926, to the Treasurer of the Corporation of the Village of Vienna.
- 5. This Board doth further order that this Order shall take effect on the first day of January, 1926.

(Seal)

(Sgd.) A. B. Ingram, Vice-Chairman.

SCHEDULE "A"

All and singular those certain parcels or tracts of land and premises situate lying and being in the Village of Vienna, in the County of Elgin and Province of Ontario, being composed of parts of Lots 12, 13, 14, 15 and 16 in the 2nd Concession and parts of Lots 13, 14, 15 and 16 in the 3rd Concession formerly in the Township of Bayham and which may be more particularly described as follows:—

Description No. 1. (Part lots 12 and 13, Concession 2, and Parts Lots 13 and 14, Concession 3, formerly in the Township of Bayham.)

Commencing at the northeast corner of Lot 15 (lying south of King Street between John Street and James Street as shown on registered plan No. 54); thence southerly along the eastern limit of said lot 15, plan 54 and along its southerly production, fourteen chains (14.00) more or less to a point in the southerly limit of High Street, distant five chains and nine links (5.09) measured easterly along the same from the northwest angle of Block "T" (Plan 54); thence southerly parallel to the westerly limit of Block "T", twenty-six chains and thirty-nine links (26.39); thence southwesterly, in a straight line, ten chains and twenty-six links (10.26) more or less to the southeast angle of the northwest quarter of Lot 13, Concession 2; thence southwesterly along the last described line produced in a straight line, eight chains (8.00) more or less to the centre of Big Otter Creek; thence southeasterly along the centre of Big Otter Creek, two chains (2.00) more or less to the southerly limit of the Village of Vienna; thence westerly along the southerly limit of the Village of Vienna, twenty-nine chains (29.00) more or less to the westerly limit of Lot 12, Concession 2; thence northerly along the westerly limit of said Lot 12 and its northerly production, sixty chains and fifty links (60.50) more or less to the centre of the road allowance between Concessions 2 and 3; thence easterly along the centre of the said road allowance, thirty-one chains and fifty-four and one-half links (31.54½) more or less to a point opposite the centre line of Centre Street; thence northerly to and along the centre line of Centre Street, thirteen chains and thirty-seven and one-half links (13.37½) more or less to a point opposite the centre line of Pearl Street; thence easterly, to and along the centre line of Pearl Street, ten chains and fifty links (10.50) more or less to the centre line of Union Street; thence southerly along the centre line of Union Street to a point in the westerly production of the northerly limit of Block "D" (east of Union Street,

Plan 54); thence easterly to and along the northerly limit of Block "D" and its easterly production, two chains and fifty links (2.50) to the centre of the lane laid out in rear of said Block "D"; thence southerly along the centre line of said lane, one chain and twenty-five links (1.25) to the northerly limit of Block "C" (east of Union Street, Plan 54); thence easterly along the northerly limit of said Block "C", one chain and sixty-two and one-half links (1.62½) to the northeast angle of said Block "C"; thence southeasterly along the line between Blocks "A" and "H" (lying between Front Street and Union Street) and along its southeasterly production, two chains and eighty-four links (2.84) more or less to the centre line of Front Street; thence southwesterly along the centre line of Front Street to the centre line of the road allowance between Concessions 2 and 3 (King Street); thence westerly along the centre line of King Street to a point in the northerly production of the easterly limit of lot 15 (lying south of King Street between John Street and James Street, Plan 54); thence southerly, fifty links (0.50) more or less to the place of beginning.

Description No. 1 will include:—

(a) All of the following lots as shown on Registered Plan 54.

Lots 13, 14, 15, south on King Street.

Lots 10, 11, 12, east on John Street.

Lots 1 to 12 inclusive, east on Centre Street.

Lots 1 to 12 inclusive, west on Marr Street.

Lots 1 to 6 inclusive, east on Marr Street.

Lots 1 to 6 inclusive, west on Centre Street and South of Pearl Street.

Blocks A, B, C, D, East on Union Street.

(b) The west seventy-eight links (0.78) of Lots 7, 8 and 9 West on James Street (Plan 54).

Part of the west part of Block "T", Plan 54.

(c) The north half Lot 12, Concession 2.

The north ten chains (10.00) of the south half Lot 12, Concession 2. The northwest quarter of Lot 13, Concession 2.

Part of the west part of the north ten chains (10.00) of the south half of Lot 13, Concession 2.

The unsubdivided part of Lot 13, Concession 3, lying between King Street, Marr Street, Union Street and south of Lot 6, east on Marr Street and Lot 6, west on Union Street.

Description No. 2. (Part of Lots 13, 14, 15 and 16, Concession 2, and part of Lots 14, 15 and 16, Concession 3, formerly in the Township of Bayham.

Commencing at a point in the northeast angle of said Lot 16, Concession 2, thence southerly along the easterly limit of said Lot, sixty chains (60.00) more or less to its intersection with the southerly limit of the Village of Vienna, thence westerly along the southerly limit of the Village of Vienna, sixty-five chains and ninety-five links (65.95) more or less to the centre of Big Otter Creek, thence northeasterly along the centre of Big Otter Creek, three chains (3.00) more or less to its intersection with the westerly limit of Lot 14, Concession 2; thence northerly along the westerly limit of said Lot 14, six chains (6.00) more or less to the line between the north and south halves of said Lot 14; thence easterly along the line between the north and south halves of said Lot 14, ninety-four links (0.94) more or less to the centre of Big Otter Creek; thence northeasterly along the centre of Big Otter Creek to a point opposite the southeast angle of Block "L" (south on Water Street, Plan 54); thence westerly along the centre of Big Otter Creek to its intersection with the southerly production of the centre

line of the North Street; thence northerly to and along the centre line of North Street to a point distant, one hundred and forty-nine feet (149'.0") measured southerly along the same from the southerly limit of Chapel Street; thence easterly parallel to Chapel Street, four hundred and sixteen feet and three inches (416'.3"); thence northerly, in a straight line, one hundred and fifty-seven feet and six inches (157'.6") to a point in the southerly limit of Chapel Street distant three hundred and fifty-five feet and six inches (355'.6") measured easterly along the same from the easterly limit of North Street; thence northerly in the northerly production of the last described course, thirty-seven and one-half links (.37½) more or less to the centre of Chapel Street; thence easterly along the centre of Chapel Street to its intersection with the southerly production of the westerly limit of Lot 6 (north on Chapel Street, Plan 54); thence northerly to and along the westerly limit of said Lot 6 and along its northerly production to the centre of River Street; thence easterly along the centre of River Street, five chains and twenty-five links (5.25) more or less to the westerly limit of Block "A" (Plan 54); thence northerly along the westerly limit of Block 'A" to the easterly edge of Big Otter Creek; thence northerly along the easterly edge of Big Otter Creek to its intersection with the centre line of the Plank Road; thence northeasterly along the centre of the Plank Road to its intersection with the westerly production of the centre line of the road laid out between Lots 9 and 10, east on Plank Road, as shown on Plan 54 and marked "Public Road," thence easterly and southeasterly along the centre of said "Public Road" to its intersection with the centre line of the Road allowance between Lots 15 and 16, Concession 3; thence northerly along the centre line of the road allowance between Lots 15 and 16 to a point opposite the southerly limit of Block "B" (Plan 54); thence easterly to and along the southerly limit of Block "B" to the westerly limit of Block "J"; thence southerly along the westerly limit of said Block "J" and its southerly production to the centre line of the road laid out between Blocks "J" and "I", Plan 54 and marked "Public Road"; thence easterly along the centre of said "Public Road," ten chains and fifty links (10.50) more or less to the easterly limit of Lot 16, Concession 3; thence southerly along the easterly limit of said Lot 16 and along its southerly production, forty-seven chains and ten links (47.10) more or less to the place of beginning.

Description No. 2 will include:-

(a) All of the following lots as shown on Registered Plan 54.

Lots 9 to 14, inclusive, east on Vienna Street.

Lots 14 to 17, " north on Peel Street.

Lots 13 to 16 " south on Peel Street.

Lots 10 and 11 " north on Lutes Street.

Blocks H, I, J, L., west on Plank Road (part of original Lots 14 and 15, Concession 2).

Blocks G, F, E, A, B, C, D, K., east on Plank Road (part of original Lots 14 and 15, Concession 2).

Lots 1, 2, 3, A, B, C, D, E, F, G, H, I. J, K., and

Blocks Y, O, P, Q, inclusive, north on Water Street.

Lots 1, 2, 3 and 4, " east on North Street.

Block D, " east on North Street.

Blocks H and I, " north on King Street.

Lots 6 and 7 " north on Chapel Street.

Lots A and 9, " east on Plank Road (part of original Lot 15, Concession 3).

Lot 8, inclusive, west on Road between Lots 15 and 16, Concession 3 and south of Public road.

Block C and including part marked "Pond" on Plan 54 east on road between Lots 15 and 16, Concession 3.

(b) Those parts of Lots 12 and 13, north on Lutes Street are in the Village of Vienna.

That part of Block "M", south on Water Street which lies east of the centre line of North Street produced southerly to the northerly edge of Big Otter Creek

The unsubdivided part of Lot 14, Concession 2, lying south of Lutes Street, in the Village of Vienna.

(c) The north ten chains (10.00) of the south one-half of Lot 15, Concession 2.

The North half of Lot 16, Concession 2.

The north ten chains (10.00) of the south one-half of Lot 16, Concession 2.

Description No. 3. (Part of Lots 14, 15 and 16, Concession 3, formerly in the Township of Bayham.)

Commencing at a point in the easterly limit of the road allowance between Lots 15 and 16, Concession 3, formerly in the Township of Bayham, at the southwest angle of Lot 6, as shown on Plan 54; thence easterly along the southerly limit of said Lot 6, ten chains (10.00) more or less to the southeast angle of said lot; thence southerly along the westerly limit of Block "K", two chains and twenty links (2.20) more or less to the southwest angle of said Block "K"; thence easterly along the southerly limit of said Block "K" ten chains and fifty-one and one-half links (10.51½) more or less to the southeast angle of said Block "K"; thence northerly along the easterly limit of said Block "K", fifteen chains (15.00) more or less to the northeast angle of said Block "K"; thence westerly along the northerly limit of the Village of Vienna, fifty-one chains and sixty-six links (51.66) more or less to the centre of the road allowance laid out between Block "B", north on Mill Street and Block "C", north on Creek Road; thence southerly along the centre line of the said road allowance between Blocks "B" and "C" to the centre of Mill Street; thence easterly along the centre of Mill Street, seven chains and eighty-seven and one-half links (7.87½) more or less to the easterly limit of Lot 15, Concession 3; thence southerly along the easterly limit of Lot 15, Concession 3, to the north edge of Big Otter Creek, thence easterly and southerly along the northerly edge of Big Otter Creek to its intersection with the line between Lots 16 and 17 (south of Mill Street, as shown on Plan 54); thence easterly along the southerly limit of said Lot 16, Plan 54, five chains and fifty links (5.50) more or less to the southeast angle of said lot; thence southerly along the easterly limit of Lot 13 (west on the road between Lots 15 and 16, Concession 3, as shown on Plan 54), eight chains and thirty-seven and one-half links $(8.37\frac{1}{2})$ more or less to the southwest angle of said Lot 13; thence easterly along the southerly limit of said Lot 13 and along the southerly limit of Lot 12 and said line produced, twelve chains and ninety-eight links (12.98) more or less to the centre of the road allowance between Lots 15 and 16, Concession 3; thence northerly along the centre line of said road allowance to a point in the westerly production of the southerly limit of Lot 6 (east on said road as shown on Plan 54); thence easterly, fifty links (0.50) more or less to the place of beginning.

Description of No. 3 will include:-

(a) All of the following lots as shown on Plan 54.
 Lots 12, 13, 14 west on road between Lots 15 and 16, Concession 3.
 Blocks A and B, north on Mill Street.
 Lots 6 to 11 inclusive and Block "K", east of road allowance between

Lots 15 and 16, Concession 3.

(b) Those parts of Lots 12, 13 and 14, east on the road allowance between

Lots 15 and 16, Concession 3, which lie
in the Village of Vienna.

That part of Lot 15, south on Mill Street, Plan 54, which lies in the Village of Vienna.

That part of Lot 16, south on Mill Street, which is in Lot 15, Concession 3.

Those portions of the Village of Vienna described above in Descriptions

1, 2 and 3, are shown on the attached plan surrounded by red lines.

Save and except thereout and therefrom all the lands heretofore conveyed to the Tillsonburg and Lake Erie and Pacific Railway within the existing limits of the Corporation of the Village of Vienna.

PROCEDURE FILE A-78

(See P.F. A-282)

In the matter of Chapter 86, Section 14 (4) of Ontario Statutes, 1925, and In the matter of the appropriation, by the Township of Etobicoke, of certain lands of James W. Orr, under the said Township's By-Law No. 1642—to widen the Lake Shore Road.

For record see P.F. A-282.

PROCEDURE FILE A-91

In the matter of the application of the Commissioners for the telephone system of the Municipality of the Township of Erin for authority to increase the charges for service, as follows:—

To subscribers.................from \$20.00 to \$25.00 per annum.

To Renters, in the Township of Erin..from \$20.00 to \$22.00 per annum.

Mar. 15th. Report of Vice-Chairman filed and adopted.

Mar. 15th. Order.

REPORT

The undersigned having heard the evidence of all parties relative to this application, recommends that the annexed Order be adopted as the Order of the Board.

(Sgd.) A. B. INGRAM, Vice-Chairman.

Toronto, March 15th, 1926.

March 15th, 1926.

ORDER

Upon the application of the above named applicants, upon reading the Report of A. B. Ingram, Esquire, Vice-Chairman, who heard the evidence adduced on behalf of all parties, Statements of Assets and Liabilities, Receipts and Disbursements and other material filed.

The Board orders that the applicants, the Commissioners for the telephone system of the Municipality of the Township of Erin, be authorized to charge the following rates for telephone service, to take effect as from January 1st, 1926:

To subscribers \$22.00 per annum
To persons not being subscribers within the meaning
of subsection (g) of section 2 of "The Ontario
Telephone Act, 1918":

For Local Service:

Business, individual lines	\$30.00 per annum
Residence, individual lines	\$26.00 per annum
Business, 2-party line	\$28.00 per annum
Residence, 2-party line	\$25.00 per annum
Business, 4-party line	\$26.00 per annum
Residence, unlimited party line	\$24.00 per annum
For rural party line service	\$24.00 per annum

The foregoing charges to persons not being subscribers as herein defined are payable quarterly in advance and are subject to a discount at the rate of \$2.00 per annum on all amounts paid within thirty days from the date of rendering the account for same.

And the Board further orders that any landowner, whose premises are located in the Township of Erin, desiring to rent service on the basis of a person not being a subscriber as herein defined, shall, in addition to payment of the charges which apply to such service as aforesaid, be required to purchase at cost the telephone and other subscribers' station equipment and pay for the installation of same, the said telephone and other equipment to be maintained by the system but to remain the property of the person renting such service.

And the Board makes no order for costs, save and except that the applicants shall pay \$10.00 for the Law Stamps required for this Order.

(Seal) (Sgd.) A. B. Ingram, Vice-Chairman.

PROCEDURE FILE A-150

Between:

The Ontario & Minnesota Power Co., Ltd., The Fort Frances Pulp & Paper Co., Ltd., and The International Bridge & Terminal Co., Ltd.

Appellant,

---and---

The Town of Fort Frances,

Respondent.

(Assessment Appeal, \$1,286,820)

Jan. 23rd. Argument filed.

Feb. 4th. Judgment delivered.

Mar. 4th. Notice of Appeal filed.

Mar. 29th. Draft Order filed and issued.

Apr. 15th. Appeal discontinued (See "Globe" of this date).

OPINION

This is an appeal from the decision of the Judge of the District Court of the District of Rainy River dismissing an appeal of the above companies from the finding of the Court of Revision of the Town of Fort Frances in respect of the assessment of their properties in that Town for the year 1925.

The issues raised at the hearing of this appeal were as follows:

1. The business tax.

2. Depreciation.

3. That the item of \$250,000 assessed against the buildings should be assessed equally between The Ontario and Minnesota Power Company, Limited, and The Fort Frances Pulp and Paper Company, Limited, to the former as owner, and to the latter as tenant.

4. The valuation of the outlying lands.

Upon hearing the evidence adduced, upon considering the arguments of counsel filed, and after a view of the property in question, the Board finds that The Ontario and Minnesota Power Company, Limited, is manufacturing power but is not carrying on the business of transmitting electricity for the purposes of light, heat or power.

Regarding the business assessment of the premises wherein the pulp grinders and power plant are located, the Board finds that the chief or preponderating business carried on in such building is that of manufacturing and subject to a business assessment of sixty per cent. under Section 10 (1), (d) of "The Assessment Act." As to the remainder of the property which is occupied by the Fort Frances Pulp and Paper Company, Limited, there is no dispute in respect of the business assessment of the Fort Frances Pulp and Paper Company, Limited, as to it being sixty per cent.

In regard to the appeal against the assessment of the outlying lands for the year 1925 on the ground that the assessment of these properties is too high. After reading the proceedings before His Honour the District Judge, which was filed by consent, and the evidence and argument adduced on behalf of the Appellants and Respondent, which have been carefully considered by the Board, we are of the opinion that the evidence submitted is not sufficient to warrant a reversal of the Judgment of the District Judge in respect of the outlying lands, and we so find.

Counsel for the Appellants did raise the question of depreciation, afterwards withdrawing it (see extended notes, p. 21).

In the matter of the division of the item of \$250,000 assessment upon the buildings equally between The Ontario and Minnesota Power Company, Limited, as owner, and The Fort Frances Pulp and Paper Company, Limited, as tenant; this was agreed to by both parties, therefore the Assessment Roll will require to be amended accordingly.

And the Board makes no order for costs, save and except that the Appellants shall pay \$15.00 for the Law Stamps required for this Order.

(Sgd.) A. B. INGRAM, Vice-Chairman.

I agree.

(Sgd.) J. A. Ellis, Commissioner.

Order

February 4th, 1926.

This matter coming on to be heard before the Ontario Railway and Municipal Board; upon hearing the evidence adduced by both parties and upon hearing what was alleged by Counsel, this Board was pleased to direct that this appeal should stand over for Judgment and the same coming on this day for Judgment.

It is ordered that the appeal be dismissed.

2. That the assessment roll of the Municipality be amended so that the buildings heretofore assessed at \$250,000.00 be assessed as follows:-

Those upon water power Block No. 2 at \$125,000.00 to the Ontario and

Minnesota Power Company as owners.

Those upon water power Block No. 1Z and ZA at \$125,000.00 to the Ontario and Minnesota Power Company as owners and the Fort Frances Pulp & Paper Company as tenants.

In all other respects the roll is to remain unchanged.

3. And this Board makes no order as to costs save and except that the Appellants shall pay \$15.00 for the Law Stamps required for this Order.

> (Sgd.) A. B. Ingram, Vice-Chairman.

PROCEDURE FILE A-267

Application by the Village of Forest Hill, under Section 399a of "The Consolidated Municipal Act, 1922," for approval of its By-law No. 88: to regulate the use of land on Eglinton Avenue within the limits of the said Village.

Jan. 20th. Hearing continued: 11 a.m. to 5 p.m.; adjourned to to-morrow at 10 a.m.

Jan. 21st. Hearing continued 10 a.m.: 10. 30 a.m. to 10.45 a.m.; adjourned for conference between parties. Hearing resumed 11.30 a.m. to 5.30 p.m.; adjourned for view (re Leadlay and McRonald properties and area north) to Thursday Jan. 28th, 1926. Argument 2.30 p.m., same day.

Jan. 28th. Adjourned hearing postponed to Feb. 4th, same hour.

Feb. 4th. Hearing continued: View 10.30 a.m. to 12 m. Argument 2.30 to 4 p.m. Plan (Ex. "A") to be followed; McRonald property to be made partly industrial as arranged. McKay property to be Industrial (all as agreed to except McRonald property). By-law to be amended accordingly and approved by Counsel. (See Reporter's notes.)

June 10th. New By-law No. 112 (and repealing By-law 88 as amended by By-law 108) filed.

June 10th. Approved draft Order filed.

June 10th. Order (approving By-law No. 112) issued.

February 4th, 1926.

Order

Upon the application of the said Corporation, and upon reading the material filed by Melville Grant, Esquire, Solicitor for the Applicant, upon hearing what was alleged by Counsel for the Applicant, by W. W. Vicars, Esquire, Harry Parkinson, Esquire, and William Cook, Esquire, Counsel for the rate-payers of the Corporation; and B. N. Davis, Esquire, K.C., Leopold McCauley, Esquire, J. P. Pratt, Esquire, J. T. Glover, Esquire, J. R. Cartwright, Esquire, A. J. Russell Snow, Esquire, H. J. McLaughlin, Esquire, and A. T. Bowlby, Esquire, Counsel for various parties representing owners in the Industrial Area; and Egerton Lovering, Esquire, and John Watt, Esquire, appearing in person, and the matter having come up for hearing on several days, and after an inspection of the area by the Board,

This Board orders, under and in pursuance of Section 399a of "The Consolidated Municipal Act, 1922," being Chapter 72, Ontario Statutes, 1922, and amendments thereto, that the said By-law Number 112, intituled "A By-law to regulate the use of the land fronting on Eglinton Avenue, and north of Eglinton Avenue, within the limits of the Village of Forest Hill," be and the same is hereby approved.

And the Board doth make no order as to costs, except for the payment by the said Corporation of the Board's tariff fee of \$55.00 for Law Stamps on the Order herein.

(Sgd.) A. B. INGRAM, Vice-Chairman.

PROCEDURE FILE A-276

In the matter of the application of the Corporation of the City of Fort William, for the approval of By-law No. 2516, providing for the issue of debentures to the amount of \$75,000.00 for telephone purposes.

Jan. 5th. Order.

Order

January 5th, 1926.

Upon the application of the above-named Applicant, upon hearing the evidence adduced on behalf of the Applicant, upon hearing Counsel for the Applicant and upon reading the said By-law, Statutory Declaration of Newton Edmeston, Alexander McNaughton, Henry James and Charles Moors, Mayor, City Clerk, City Treasurer and Manager of Utilities, respectively, all of the City of Fort William, and other material filed.

The Board orders, pursuant to Section 3 (e) of "The Ontario Telephone Act, 1918," that By-law No. 2516 of the Corporation of the City of Fort William, in the District of Thunder Bay, providing for the issue of debentures to an amount not exceeding Seventy-five Thousand Dollars (\$75,000.00), to meet the cost of extensions and improvements to The Fort William Municipal Telephone System, be and the same is hereby approved.

And the Board further orders that the Applicant shall, on or before the Twentieth day of January, April, July and October in each year, furnish a statement in respect of the Fort William Municipal Telephone System for the preceding three months, setting forth the following particulars:

- (a) Gross Income.
- (b) Expenditures upon operation, maintenance and management.
- (c) Net Income.
- (d) Amount due for payment of interest and sinking fund.

The first statement to be filed with the Board on or before April 20th, 1926.

And the Board makes no order for costs, save and except that the Applicant shall pay \$15.00 for the Law Stamps required for this Order.

ORDER

(Re Claim No. 29)

In the matter of the application of the Municipal Corporation of the Township of Etobicoke for the determination by the Board of the amount of damages, together with costs, sustained in consequence of the change in the building line, and the construction of the work under the said Act, and in the matter of the claim of Ethel M. Saunders, claimant.

This matter coming on for hearing on the 25th day of January, 1926, the 16th day of February, 1926, and the 21st day of March, 1926, and this Board having heard the evidence adduced on behalf of the claimant and the Municipal Corporation, and thereafter a settlement having been arrived at between the claimant and the said Corporation as is evidenced by the Agreement in writing, signed by the claimant, now filed with this Board,

The Board orders and awards in pursuance of the provisions of the said Act, to the claimant, the sum of One Thousand Dollars, including costs.

(Sgd.) A. B. INGRAM, Vice-Chairman.

DETERMINATION BY BOARD (CLAIM No. 21)

Claim of J. D. Mann, Owner of Lot 4, Block "A", Plan M 9 on the Lake Shore Road, situate at the corner of Lansdowne Avenue and the Lake Shore Road, comprising three stores and three apartments upon a lot said to be 50 feet frontage by 140 feet in depth (formerly 150 feet).

The brick building as it stands is said to have cost \$25,000. It was located and constructed back of the then restricted 20 foot line in 1923, the building consisting of three stores with full frontage of the lot and 65 feet deep. Back of the stores is a billiard parlour, and there is a basement the full size of the building. The upper floors contain apartments and offices, the stores, apartments and offices being rented except the apartment occupied by the Claimant.

For the purpose of widening the Lake Shore Road the Township of Etobicoke purchased a strip of land 10 feet in width immediately south of, and abutting on, the south side of the Lake Shore Road, opposite the Claimant's property, and extending from there east and west for a certain distance, resulting in placing the aforesaid building back 10 feet from the new street line.

In consequence of the change in the building line the Claimant states that he is entitled to \$7,300 damages.

Regarding the claim herein evidence was taken at the Board's Chambers on the 18th day of May, 1926.

Four propositions were suggested, as follows:

- 1. Moving the building to the new street line;
- 2. The construction of a one-storey front extending it to the new street line;
- 3. A two-storey front similar to the front of the present building which would be built to the new street line;
- 4. The purchase of the front 10 feet of the adjoining property east of the Mann building for a distance of 140 feet in order to prevent any buildings for that distance being built in front of his building.

The first proposition does not appear to be a practical solution, it being too costly, and if moved would cause considerable depreciation.

(Seal)

In regard to the proposed one-storey extension the Board is of the opinion that the Claimant is entitled to have a front similar to that which he has now, namely, a two-storey front extended to the new street line instead of a one-storey extension.

The purchase of the proposed 10 foot strip was suggested, but no definite

action was taken by the parties hereto.

Upon hearing the evidence adduced on behalf of the said parties, and what was alleged by counsel, and upon consideration of the material filed, and having had a view of the premises in question, the Board determines that the Claimant is entitled to Three Thousand (\$3,000) Dollars as compensation for damages sustained by him in consequence of the change in the building line, together with his costs to be taxed by the taxing officer of the Supreme Court of Ontario on the High Court Scale.

(Sgd.) A. B. INGRAM, Vice-Chairman.

(Sgd.) J. A. Ellis, Commissioner.

Dated at Toronto this 2nd day of June, A.D., 1926.

PROCEDURE FILE A-313

Between:

The Hydro-Electric Power Commission of Ontario,

Applicant,

-and-

The Toronto & York Roads Commission,

Respondent.

(Re change of grade of paved portion of Kingston Road.)

Jan. 21st. Formal notice of application filed as directed.

Feb. 16th. Reply filed.

Mar. 15th. Hearing, pursuant to appointment, 11 a.m. to 12 m., at Board's Chambers. Hearing concluded—Judgment reserved.

Mar. 18th. Judgment delivered.

Apr. 7th. Approved draft Order filed.

Apr. 7th. Order issued.

JUDGMENT

The Hydro-Electric Power Commission of Ontario, operating the Scarboro Division of The Toronto and York Radial Railway, made an application to The Ontario Railway and Municipal Board under Section 21 of "The Ontario Railway and Municipal Board Act," Chap. 186, R.S.O. 1914, and amendments thereto.

It is alleged that the Respondent raised the grade of the paved portion of the road higher than the existing grade of the railway, and thereby interfered with the free and safe operation of the electric cars of the Applicant, making it dangerous for vehicular traffic, as well as making it necessary for the Applicant to raise the grade of its railway for a distance of about 2,100 feet between Stops 10 and 12 of the said railway to conform with the new grade of the highway in order to put its railway in a safe operating condition. The total approximate cost to the Applicant to carry out this work is alleged to be \$1,218.16. The Applicant claims that such cost should be borne by the Respondent, and asks that the Board make an order to this effect.

The question of the Board's jurisdiction was not raised by either party.

Upon hearing the arguments adduced, and upon consideration of the statutes and agreements referred to by counsel, and it appearing that there is no dispute as to the facts, the Board's finding is that the Respondent is not liable to the Applicant for the whole or any part of the Applicant's claim.

The Board will make no Order as to costs, except that the Applicant pay

\$10.00 for Law Stamp, the Board's tariff fee herein.

(Sgd.) A. B. INGRAM, Vice-Chairman.

I agree: (Sgd.) J. A. Ellis,

Commissioner.

Dated at Toronto, the 18th day of March, A.D., 1926.

March 18th, 1926.

ORDER

Upon the application of the above named Applicant, upon hearing the evidence adduced on behalf of the Applicant and Respondent and upon hearing Counsel for the Applicant and Respondent,

In pursuance of the Judgment delivered the 18th day of March, 1926,

1. The Board orders that this application be and it is hereby dismissed.

2. And the Board makes no Order as to costs except that the Applicant pay \$10.00 for the Law Stamp on this Order.

(Sgd.) A. B. Ingram, Vice-Chairman.

JUDGMENT

This application was received by the Board on December 18th, 1925, and in its amended form on January 18th, 1926. On the 26th January, 1926, the Board heard all parties in interest in the City of Hamilton, and issued its Order of same date dismissing the application for want of jurisdiction to amend its annexation order of 26th January, 1914, on the basis applied for in the said amended application.

McKittrick Properties, Limited, entered an appeal which was heard by the Appellate Division on the 11th May, 1926, resulting in the reversal of the Judgment of the Board.

Pursuant to appointment the Board heard the interested parties in the City of Hamilton on the 19th October and 1st November, 1926, respectively, on the merits of the application, and at the conclusion of the hearing reserved judgment.

Briefly, the points in issue are as follows:

- A. The extension of a fixed assessment from the year 1926 to the year 1936, inclusive, or as set out more fully in paragraph "I" of the said amended application.
- B. Respecting relief, liability and payments in connection with the trunk sewer from Paradise Road to the West End sewage disposal works, or as set out more fully in paragraph "2" of the amended application.
- C. Regarding relief and any further liability towards the cost of the Mc-Kittrick bridge and its approaches, or as set out more fully in paragraph "3" of the amended application.
- D. In regard to future assessment of flankages under "The Local Improvement Act," or as set out more fully in paragraph "4" of the amended application.
- E. Relief regarding construction of certain other trunk sewers, or as more fully set out in paragraph "5" of the amended application.
- F. That the said Order be amended in such other respects as may seem fair, reasonable and equitable, or as more fully set out in paragraph "6" of the amended application.

In regard to paragraph "A," fixed assessment, it would appear that it is not now and has not been for some time the policy of the Corporation of the City of Hamilton to grant a fixed assessment as an inducement to outside areas to become annexed to the said city.

Paragraph No. "2" of the Order of the 26th January, 1914, provided for a fixed assessment for the years 1914 to 1919, inclusive, which time was extended by Ontario Statute, Chapter 63, 1918, from 1914 to 1926, inclusive, and now to approve of a further extension of a fixed assessment to the year 1936 seems unreasonable and the Board so decides.

With reference to paragraphs "B," "D," "E" and "F," the Board declines to provide for any change for the reasons already indicated at the hearing.

Regarding paragraph "C," relief in connection with the McKittrick bridge, in view of the provisions of subsection (3) of section 1, chapter 63, Ontario Statutes, 1918, the Board cannot satisfy itself that it has the legal authority to grant the relief that the Board believe the said lands described in paragraph "6" of the said Order, and the said McKittrick Properties, Limited, are entitled to, by reason of the fact that the said bridge has become an important throughtraffic bridge, a fact which was not existing or apparent at the time the agreement was entered into.

The Board therefore regrets that it cannot see its way clear to amend paragraph "6" of the said Order of 26th January, 1914, so as to provide that the said lands described therein and the said McKittrick Properties, Limited, are thereby discharged and relieved of any liability for further payments either of principal or interest towards the cost of the said McKittrick bridge or its approaches.

If the Board had such legal authority it would dispense with such payments falling due on and after the 1st day of January, A.D. 1927.

Save as directed by the Appellate Division there will be no order as to costs except that the applicants shall pay \$45.00 for law stamp, the Board's tariff fee herein.

(Sgd.) A. B. Ingram, Chairman.

I agree: (Sgd.) J. A. Ellis,

Commissioner.

Dated at Toronto, this 16th day of December, 1926.

PROCEDURE FILE A-322

Application by the Township of Gloucester, under section 399a of "The Consolidated Municipal Act, 1922," for approval of its By-law No. 15 (1925)—Restricted Area in Police Village of Overbrook.

Mar. 2nd. Order.

REPORT

The undersigned, having heard the evidence of all parties relative to this application, recommends that the annexed Order be adopted as the Order of the Board.

(Sgd.) A. B. INGRAM,

Toronto, March 3rd, 1926.

 $Vice ext{-}Chairman.$

March 3rd, 1926.

ORDER

Upon the application of the above-named applicants, upon reading the Report of A. B. Ingram, Esquire, Vice-Chairman, who heard the evidence adduced on behalf of the applicants and J. J. Sedgwick, the said application and other material filed,

The Board orders and determines, pursuant to section 33 of "The Ontario Telephone Act. 1918":

1. That J. J. Sedgwick is a subscriber, as defined by subsection (g) of section 2 of "The Ontario Telephone Act, 1918," to the Telephone System of the Municipality of Belmont and Methuen.

2. That an annual special rate may be levied and collected upon the property of the said J. J. Sedgwick, situate in the Township of Seymour, and known

as Lot 6, Concession 14, each year for the years 1925 to 1934, inclusive.

3. That all special rates heretofore and hereafter levied as herein provided upon the property of the said J. J. Sedgwick, under the provisions of sections 29, 29a, 29c and 30 of "The Ontario Telephone Act, 1918," shall be deemed to be valid and lawfully levied, provided that such special rate levied in any year shall not exceed the amount approved by the Board under the provisions of section 88 of the aforesaid Act.

And the Board makes no order for costs or for law stamps in respect of this Order.

(Sgd.) A. B. INGRAM, Vice-Chairman.

PROCEDURE FILE A-412

Application by the Town of Kapuskasing, under section 399a (2b) of "The Consolidated Municipal Act, 1922," for approval of its By-law No. 79, amending its Restricted Area By-law No. 21.

Feb. 24th. Application and material filed.

May 10th. Hearing, pursuant to appointment, at Town Hall, Kapus-kasing (Mr. Commissioner Ellis, authorized under section 9, chapter 186, R.S.O.).

May 21st. Amending By-law No. 86 (amending By-law No. 79), filed.

June 30th. Report of Mr. Commissioner Ellis filed and adopted.

June 30th. Order (approving By-law No. 79, as amended by No. 86) issued.

REPORT OF MR. COMMISSIONER ELLIS

I heard these applications at Kapuskasing on 10th May last. The original By-law, No. 21, which it is proposed to amend, was passed on the 4th September, 1922, under section 399a of "The Consolidated Municipal Act, 1922." At that time this section only provided for prohibiting the use of land for the erection or use of buildings within any defined area for any other purpose than that of a detached private residence. It has since been amended by providing that the use of land or the erection or use of buildings within any defined area could be prohibited for any purpose. All the lots in the Town of Kapuskasing were originally owned by the Province, and those that have been sold were so sold subject to certain restrictions.

In what is known as the "business circle," the buildings to be erected upon the lots were restricted to buildings to be used for retail or commercial business, and such buildings were not to have more than three separate living compartments in connection therewith. The intention of By-law No. 79 is to amend By-law No. 21 by restricting the use of the lots in the business area to the purposes mentioned in the Province's building conditions, which could not be done under section 399a of the Municipal Act in 1922. By-law No. 79 also provides that the buildings to be erected in the business circle shall not be erected nearer

than four feet to the front line of the lots or the street line. As By-law No. 79 merely carries out what was intended and understood by all parties, I recommend that it be approved, subject to an amending by-law being passed which will more clearly express the intention. There was no opposition to By-law No. 79. Since I heard the application, By-law No. 79 has been amended by By-law No. 86 on the lines indicated by me at the hearing. By-law No. 79, as amended by By-law No. 86, can therefore now be approved.

With regard to By-law No. 80, there is much more difficulty, and there was a great deal of opposition to it. It deals with the lots in what is known as the "industrial area." The conditions of sale for lots in this area provided that the buildings erected thereon should be those required for industrial business, apartments, boarding houses or for any use other than for private detached dwellings. The strict interpretation of this provision might be held to mean that buildings

for wholesale or retail business purposes might be erected on the lots.

Upon consideration of the evidence adduced and of the material filed, it would appear that the intention in laying out the townsite was not to allow the erection of buildings to be used as stores in this area. There has therefore arisen a doubt as to whether stores could or could not be erected in the area. Several of such buildings were erected in the area prior to the passing of By-law No. 80, and several others have been erected after the passing of this by-law, and before I heard the application. As those who have erected the stores in the industrial area have apparently done so in good faith, and as all the lots in the area heretofore have been entirely free from any restrictions under section 399a of the Municipal Act, I think it would be well to give the persons who have erected such stores the benefit of any doubt.

I therefore recommend that if the Town Council will pass another by-law amending By-law No. 80, by striking out of the latter by-law the lots upon which such buildings were erected for use as stores at the time I heard the application, that By-law No. 80 when so amended be approved.

(Sgd.) J. A. Ellis,

Toronto, June 30th, 1926.

Commissioner.

Adopted as the basis of the Board's Order.

(Sgd.) A. B. Ingram, Vice-Chairman.

30th June, 1927.

Order

Upon the application of the said Corporation, and upon reading the copies of the said By-laws and other material filed, and upon reading the Report of Mr. Commissioner Ellis (authorized under section 9, chapter 186, R.S.O.) on the hearing held, pursuant to appointment at the Town Hall, in the Town of Kapuskasing on the 10th day of May, 1926, which Report, dated the 30th day of June, A.D. 1926, has been adopted as the basis of this Order,

The Board orders, under and in pursuance of the provisions of subsection (2b) of section 399a of "The Consolidated Municipal Act, 1922," that the said By-law No. 79, intituled "By-law No. 79. A By-law to create an area for business and commercial purposes, and to regulate the location of buildings to be erected or altered," as amended by the said By-law No. 86, be and the same

is hereby approved.

(Sgd.) A. B. Ingram, Vice-Chairman.

PROCEDURE FILE A-412

PROCEDURE FILE A-416

In the matter of the application of the Corporation of the Village of Wheatley, under section 17 of "The Consolidated Municipal Act, 1922," for annexation to the said Village of certain parts of the Townships of Mersea and Romney, all as set forth in Schedule "A" hereto annexed.

Feb. 26th. Application certified copy of resolution of Village Council

and surveyor's description and plan (blueprint), filed.

Mar. 19th. Hearing, pursuant to appointment, 1 to 1.30 p.m., Council Chamber, Town Hall, Wheatley. (Vice-Chairman, authorized under section 9, chapter 186, R.S.O.) Judgment reserved.

Mar. 23rd. Report of Vice-Chairman filed and adopted. Application

granted (on terms).

Mar. 30th. Approved draft order filed.

April 1st. Order issued.

REPORT

As authorized by the Board, pursuant to the provisions of section 9 of "The Ontario Railway and Municipal Board Act," the undersigned, pursuant to

appointment, attended at the Village Hall in the Village of Wheatley, on Friday, the 19th instant, for the purpose of an enquiry into the annexation application of the aforesaid applicant, and having heard the statements and evidence submitted on behalf of all parties interested, now reports as follows:

The applicant was represented by J. G. Kerr, Esq., K.C., and those opposed by Messrs. Nelson Julien, Archibald Shank, George J. Healey, and by Mr.

Henry Hodgson representing the Township of Romney.

From the evidence submitted it would appear that public notice of the hearing was duly given as directed by the Board. A plan and technical description were prepared by an Ontario land surveyor, and filed with the Board. In regard to the latter, a certificate will require to be made by the Ontario land surveyor as to the correctness of the technical description of the said lands proposed to be annexed to the Village of Wheatley.

The Village Council are unanimously in favour of the annexation. The objections of those opposing it are based largely on what they think will be increased taxation should the application be approved. It was also intimated by one of those opposed that the gas rates would be higher. The representative of the Township of Romney was of the opinion that the percentage now payable by the Township towards the Union School Section would be increased beyond

the 18 per cent. now payable.

In view of the objections raised in regard to the assessment of farm lands, I am of the opinion that there should be a fixed assessment for the term of five years; that is to say, the present assessment on the lands annexed should remain unchanged for a period of five years (1927-1931, both inclusive), provided that any lands that shall be used for other than farm purposes only may thereupon be reassessed by the said Village.

I recommend that the application be granted on the above terms.

(Sgd.) A. B. INGRAM, Vice-Chairman.

Adopted as the basis of the Board's Order.

(Sgd.) J. A. Ellis, Commissioner.

Dated at Toronto, this 23rd day of March, 1926.

March 23rd, 1926.

ORDER

This application having come on to be heard before the Vice-Chairman of this Board at Wheatley, on Friday, the 19th day of March, 1926, pursuant to appointment in that behalf, and all proper times having elapsed and all notices and advertisements given, and the Vice-Chairman having heard all the evidence adduced and what was alleged by counsel, and the Board having held the same over for judgment and the same coming on this day for judgment, and the Board deeming it expedient that the application be allowed,

It is ordered that from and after the first day of January, 1927, the following parcels or tracts of lands, roads and premises shall be and the same are hereby annexed to the Village of Wheatley and declared to form a part of the territory comprised within the limits of the said village, that is to say, all and singular those certain parcels or tracts of lands, roads and premises situate, lying and being partly in the Township of Mersea, in the County of Essex, and partly in the Township of Romney, in the County of Kent, and part of the Townline Road between the said townships, and which said parcels or tracts may be more particularly described as follows:

- 1. Part of Lot 218, North Talbot Road Range, in the Township of Mersea, more particularly described as follows: Commencing at the intersection of the northerly limit of the Village of Wheatley, with the westerly limit of the Townline Road between the Townships of Mersea and Romney; thence westerly following the northerly limit of the said village six hundred and seventy-seven feet (677') more or less to the line in the centre of Lot 218; thence northerly following the said line in the centre of Lot 218, two thousand six hundred and eighty-nine feet (2,689') more or less to the northerly limit of the land now owned and occupied by Jas. E. McClellan; thence easterly following the northerly limit of the said McClellan's land six hundred and seventy-six feet (676') more or less to the westerly limit of the Townline Road; thence southerly following the westerly limit of the Townline Road two thousand six hundred and eighty-five feet six inches (2,685' 6") more or less to the place of beginning.
- 2. Part of Lots 6 and 7 in Concessions 2 and 3 and part of the road allowance between concessions 2 and 3, and part of the road allowance between Lots 6 and 7, all in the Township of Romney, in the County of Kent, and which said parcels or tracts may be more particularly described as follows: Commencing at the intersection of the north limit of the Village of Wheatley with the east limit of the Townline Road; thence east following the north limit of the said village seven hundred and sixty-nine feet (769') more or less to the northeasterly angle thereof; thence N. 6° 27' W. six hundred and three feet (603') more or less to an iron bar; thence N. 0° 02' E. twelve hundred and eighty-one feet, six inches (1,281' 6") more or less to an iron bar planted in the Third Concession Road; thence N. 9° 27' W. eleven hundred and eighty feet (1,180') more or less to the northerly limit of the Pere Marquette Railway right-of-way; thence southwesterly following the said northerly limit of the Pere Marquette Railway rightof-way two hundred and ninety-nine feet, six inches (299' 6") more or less to a wire fence forming the northerly limit of the lands of one Julien; thence westerly following the last-mentioned limit two hundred and eighty feet (280') more or less to the east limit of the Townline Road; thence south following the east limit of the said Townline Road two thousand eight hundred and forty-six feet, six inches (2,046′ 6″) more or less to the place of beginning.

3. The Townline Road between the Townships of Mersea and Romney, from the north limit of the present village to the north limit of the lands now owned by Jas. E. McClellan, a distance of two thousand six hundred and eighty-five feet, six inches (2,685′ 6″).

It is further ordered, by and with the consent of the applicants and as a condition upon which this Order is issued, that all farm lands within the territory above described in parcels Numbers One and Two, now assessed as farm lands, shall bear the same assessment for the next five years as the assessment they now bear, provided they continue to remain farm lands, so that throughout the years 1927 to 1931, both inclusive, all lands in the said added district now assessed as farm lands and continuing to be used as farm lands, shall be assessed at the same valuation per acre as they are now, and the same shall apply to the farm buildings thereon.

(Sgd.) A. B. Ingram, Vice-Chairman.

PROCEDURE FILE 417

Application by the Wheatley Telephone Co., Ltd., under section 88 of "The Ontario Telephone Act, 1918," for authority to increase charges for service.

Mar. 2nd. Application and material filed.

Mar. 19th. Hearing, pursuant to appointment, 1 to 2 p.m., Town Hall, Wheatley (Vice-Chairman, authorized under section 9, chapter 186, R.S.O.).

Mar. 30th. Report of Vice-Chairman filed and adopted.

Mar. 30th. Order.

REPORT

The undersigned, having heard the evidence of all parties relative to this application, recommends that the annexed Order be adopted as the Order of the Board.

(Sgd.) A. B. INGRAM, Vice-Chairman.

Toronto, March 30th, 1926.

March 30th, 1926.

ORDER

In the matter of the application of the Wheatley Telephone Company, Limited, for authority to increase the charges for rural party line service, as follows:

From \$18.00 per annum, less a discount at the rate of \$3.00 per annum for prompt payment, to \$20.00 per annum, payable quarterly in advance, less a discount of 10 per cent. for prompt payment.

Also for the approval of an installation charge to new subscribers of \$1.50, and a re-installation charge of \$1.50 in cases where the telephone is removed for

non-payment of charges.

Upon the application of the above-named applicant, upon reading the Report of A. B. Ingram, Esquire, Vice-Chairman, who heard the evidence adduced on behalf of all parties, statements of assets and liabilities, receipts and disbursements, and other material filed.

The Board orders that, subject to the several conditions prescribed in this Order, the applicant, the Wheatley Telephone Company, Limited, be authorized to charge \$20.00 per annum for rural party line service, payable quarterly in advance, less a discount of 10 per cent. on all amounts paid within thirty days from the date of rendering the account for same and to take effect as from April 1st, 1926.

The Board further orders that in each case where a subscriber to the system of the applicant instructs the applicant in writing to disconnect his service and remove the telephone, or where such service is discontinued for non-payment of charges due and in arrear for a period of over thirty days, the applicant may, before such services reconnected, charge a fee of \$1.50 to cover the cost of the reinstallation of the telephone upon the premises of such subscriber; provided, however, that such charge shall only apply in cases where the service is reconnected within twelve months from the date upon which the telephone was removed from the premises aforesaid.

The Board further orders that the installation charge of \$1.50 proposed by

the applicant be not approved.

The Board further orders:

1. That for the purpose of providing a fund to meet the cost of the renewal of its plant and equipment, the applicant shall, on December 31st, 1926, and each year thereafter, set aside out of its earnings a sum equal to not less than five per cent. of the total value of the plant and equipment used in the applicant's business on December 31st in each year. The fund so provided shall, unless

otherwise authorized by the Board, be applied exclusively to the cost of renewing such portion of the said plant and equipment as may from time to time be rendered necessary by depreciation or obsolescence, and after deducting therefrom such amounts as may have been so expended in any one year, the residual amount shall be deposited in a chartered bank at interest, and the money so deposited may, with the approval of the Board, be invested in interest-bearing securities, and all interest accruing from any portion of the depreciation fund so deposited or invested shall from time to time be carried to the credit of the said fund.

- 2. That the applicant shall, on or before the fifteenth day of January in each year, furnish the Board with a report, setting forth: (a) the total amount standing at the credit of the fund referred to in clause 1 hereof on the 31st day of December in the preceding year, (b) the amount of such fund which has been temporarily used in the purchase of securities, (c) the names and values of the securities so purchased, together with (d) a certified statement from the bank in which the fund is deposited, showing the amount standing at the credit of such fund on the last-named date.
- 3. That the applicant shall keep separate records of all expenditure upon the construction, operation, maintenance and renewal of its plant and equipment, and shall each year furnish its shareholders with an annual report and balance sheet in the form approved of by this Board, as set forth on pages 156 to 159 of "Telephone Systems, 1923," or in such form as may hereafter be prescribed by the Board.

And the Board makes no order for costs, save and except that the applicant

shall pay \$10.00 for the Law Stamps required for this Order.

(Sgd.) A. B. Ingram, Vice-Chairman.

PROCEDURE FILE A-421

Application by D. Campbell, under section 33 of "The Ontario Telephone Act, 1918," for an Order determining the validity of a special rate levied under Part II of the said Act, upon the property of the applicant by the Municipal Corporation of the Township of London.

Mar. 6th, Application and material filed.

May 21st. Hearing, pursuant to appointment, 10.30 to 11.45 a.m., Court House, London. (Vice-Chairman, authorized under section 9, chapter 186, R.S.O.)

June 1st. Report of Vice-Chairman filed and adopted.

June 1st. Order.

REPORT

The undersigned, having heard the evidence of all parties relative to this application, recommends that the annexed Order be adopted as the Order of the Board.

(Sgd.) A. B. Ingram, Vice-Chairman.

June 1st, 1926.

ORDER

Upon the application of the above-named applicant, upon reading the Report of A. B. Ingram, Esquire, Vice-Chairman, who heard the evidence adduced on behalf of all parties and other material on file,

The Board orders and determines, pursuant to section 33 of "The Ontario Telephone Act, 1918":

1. That Daniel Campbell is a subscriber, as defined by subsection (g) of section 2 of "The Ontario Telephone Act, 1918," to the telephone system of the

Municipality of the Township of London.

2. That an annual special rate may be levied and collected upon the property of the said Daniel Campbell, situate in the Township of Lobo, and known as Lot 6, Concession 4, for the purpose of paying his share of the cost of establishing and maintaining the telephone system of the Municipality of the Township of London each year until the expiration of the period for which debentures may be issued to meet the cost of establishing the said system.

3. That all special rates heretofore levied and hereafter to be levied upon the property of the said Daniel Campbell as herein described under the provisions of sections 29, 29a, 29c and 30 of "The Ontario Telephone Act, 1918," shall be deemed to be valid and lawfully levied; provided that such special rate levied in any year shall not exceed the amount approved by the Board under the

provisions of section 88 of "The Ontario Telephone Act."

And the Board makes no order for costs or for law stamps in respect of this Order.

(Sgd.) A. B. Ingram, Vice-Chairman.

In the matter of the application by the City of Toronto, under Section 94 of "The Public Health Act," for an Order prescribing the manner in which may be carried on the work of continuing the sewerage system of the City of Toronto into the Township of East York and location, etc., of a sewerage plant in connection therewith.

May 27th. Application and material filed.

June 14th. Hearing, pursuant to appointment, 11 to 11.30 a.m., at Board's Chambers. Copy of Nasmith & Eddy's Report to be filed and served on the Clerk of East York Township. Draft Order to be submitted to Township of East York for approval.

June 17th. Material filed (including approved draft Order) as directed.

June 21st. Order.

June 14th, 1926.

Order

Upon the application of the Corporation of the City of Toronto pursuant to Section 94, Subsection (11) of "The Public Health Act," for an Order prescribing the manner in which may be carried on the work of continuing the sewerage system of the City of Toronto in the Township of East York and of locating, constructing, maintaining and operating the sewage disposal plant and works for the City of Toronto with the necessary appurtenances, etc., in the said Township of East York;

And the Applicant having in support of such application submitted the fol-

lowing documents, namely:

1. A plan showing the proposed site of the said sewage disposal plant and works with the necessary appurtenances, etc., located partly in the Town of Leaside and partly in the Township of East York within the area lying east of the Canadian Pacific Railway right-of-way west of the production southerly of Leslie Street and north of the line of St. Clair Avenue produced and showing also the location of the sewer to be laid through the Town of Leaside and the Township of East York to connect with the said plant and works.

2. A report made by Harrison P. Eddy and George G. Nasmith, Consulting Engineers, to R. C. Harris, Esquire, Commissioner of Works for the City of Toronto, dated 3rd day of April, 1926, making recommendations in respect to

the North Toronto Sewerage Disposal.

3. A certified copy of a resolution passed by the Council of the Corporation of the Township of East York on the 9th day of March, 1926, approving and consenting to the location and operation by the City of Toronto of a sewage disposal plant and works with the necessary appurtenances in the Township of East York on the said site and to the construction, maintenance and use of the said sewer connecting therewith.

4. A certified copy of a resolution passed by the Council of the Corporation of the Town of Leaside on the 17th day of April, 1926, approving and consenting to the location and use of the said sewage disposal plant and works in the Town of Leaside and to the construction, maintenance and use of the said sewer connecting therewith.

5. A copy of the certificate of the Provincial Board of Health dated the 20th day of May, 1926, approving of the construction of the said sewage disposal plant and works on the said site as recommended in the said report of Harrison P. Eddy and George G. Nasmith according to the plan therein referred to as

Project III;

And the Board having appointed this day for the hearing of the application and having given directions as to the service, publication and posting of copies of its appointment for hearing as required by Section 94 (11) of "The Public Health Act," and having on this day heard evidence of compliance with such directions and what was alleged on behalf of the Corporation of the City of Toronto and of the Township of East York the only parties appearing before the Board.

1. The Board doth hereby prescribe that the manner in which the said work of continuing the sewerage system of the City of Toronto into the Township of East York and of locating, constructing, maintaining and operating a sewage disposal plant and works for the City of Toronto with the necessary appurtenances, etc., in the said Township of East York may be carried on shall be as set out in the said report of Harrison P. Eddy and George G. Nasmith to the Commissioner of Works for the City of Toronto, dated the 3rd day of April, 1926, and in Memorandum accompanying such Report referred to as Project III as approved by the Provincial Board of Health.

Procedure File A-564

Application by The Essex Border Utilities Commission under Subsection (2) of Section 10 of "The Consolidated Essex Border Utilities Act" (1922) as amended by Subsection (2) of Chapter 85, Ontario Statutes, 1925, for consent to passing of a By-law to raise by way of loan secured by issue of debentures the sum of \$375,000 for completion of Filtration Plant constructed by the said Commission.

June 1st. Application filed.

June 11th. Subpoena issued to Applicant.

June 22nd. Hearing, pursuant to appointment, 10 a.m. to 2 p.m., at Council Chamber, Windsor. Judgment reserved as to jurisdiction. Application allowed on merits. (See Reporter's Notes.)

June 28th. Judgment (letter) delivered. Board decides it has jurisdiction and consents to passing of By-law. Applicant's Solicitor to draft form of consent and have same approved by Mr. Davis.

July 21st. Order issued.

June 28th, 1926.

DEAR SIR:

In the matter of the application under Section 10 of "The Consolidated Essex Border Utilities Act," and the Amendments thereto of the Essex Border Utilities Commission for consent to the passing of a By-law to issue debentures in the sum of \$375,000.00 to complete the Filtration Plant.

The Board, after hearing all parties interested at Windsor on the 21st instant, expressed its approval of the work in question on its merits, and reserved the question of jurisdiction, this to be decided on receipt of certain documents that were to be filed, and which were filed with the Board on the 25th instant.

The Board is of opinion that it has jurisdiction herein and consents to the passing of the By-law to raise by way of loan upon the security of debentures the sum of \$375,000.00 for the completion, extension or improvement of any works

already commenced by the said Commission.

You will therefore draft form of consent of this Board and submit same to

Mr. Davis for approval as to form.

There will be no costs other than the Board's tariff fee of \$15.00 on the hearing herein. Kindly remit cheque to the Board for Law Stamp.

Yours very truly,

(Sgd.) A. B. INGRAM, Vice-Chairman.

John Sale, Esq., Barrister, etc., Windsor, Ont.

June 28th, 1926.

ORDER

Upon application of the Essex Border Utilities Commission made to this Board at the City of Windsor on the 22nd Day of June under Section 10 of the Consolidated Essex Border Utilities Act, 1921, in presence of Council for the said Commission and for the City of Windsor, Towns of Walkerville, Sandwich, Riverside, Ford City and La Salle and the Township of Sandwich West, upon hearing the evidence adduced and what was alleged by Counsel and the Board having reserved its decision and the same coming on this day for decision.

The Board under and in pursuance of the Consolidated Essex Border Utilities Act and amendments thereto consents to the passing by the Essex Border Utilities Commission of the By-law set out in the proceedings herein to raise by way of loan secured by the issue of debentures the sum of Three Hundred and Seventy-five Thousand Dollars (\$375,000.00) to complete the Filtration Plant

constructed by the said Commission.

And the Board makes no order as to costs except that the Commission shall pay \$15.00 for Law Stamps on this Order.

(Sgd.) A. B. Ingram, Vice-Chairman.

PROCEDURE FILE A-582

In the matter of the petition of G. A. Brown and others, under section 9 of "The Local Improvement Act," against the construction of a concrete pavement and curb on Talbot Street in the Town of Leamington, between the Michigan Central Railway crossing and the west limit of the town.

June 9th. Petition filed.

July 7th. Hearing, pursuant to appointment, 10 a.m. to 1 p.m., Council Chamber, Town Hall, Leamington. (Mr. Commissioner Ellis, authorized under section 9, chapter 186, R.S.O.)

July 12th. Report of Mr. Commissioner Ellis filed and adopted.

REPORT OF COMMISSIONER ELLIS

As authorized by the Board, pursuant to the provisions of section 9 of "The Ontario Railway and Municipal Board Act," the undersigned, pursuant to appointment, heard this application on the 7th July, 1926, at Learnington, and now reports as follows:

Despite the fact that the construction of the pavement in question has been petitioned against to the Board, the construction of it had been proceeded with,

and is now nearly completed.

The portion of the highway upon which the pavement is being constructed is a continuation of the main street of the Town of Leamington, and a very

necessary link in the Provincial Highway. The Engineer of the Highway Department stated that it was a very much travelled highway. In my opinion the pavement under construction is of a better class than would have been constructed if the highway in question was an ordinary residential street.

The estimated cost of the pavement is \$19,750.00. The Highway Department of the Province has agreed to pay for the cost of half of the central twenty feet of the pavement, which is estimated to cost \$5,801.00. The amount to be paid by the town is estimated at \$1,011.00. Deducting the amount to be paid by the town and the Highway Department from the total estimated cost, leaves an estimated amount of \$12,912.00 to be paid by the property owners.

The pavement has a curb on both sides which is estimated to cost \$3,439.00. Of this amount the municipality is only paying \$82.20. The curb is primarily for retaining purposes, but it also forms the sides of a gutter to carry off surface water. I think a larger amount than the town proposes to pay for curbing should have been allowed under clause (b) of section 21 of "The Local Improvement Act" as being for work required for surface drainage.

More than half of the lands fronting on the work are farm lands, and it is doubtful if these lands will be in demand for building purposes for some con-

siderable time.

After hearing what was alleged by Counsel for both the property owners and the town, upon hearing the evidence, and having viewed the work in question, I recommend that there should first be deducted from the cost of the work the amount to be paid by the Highway Department. Then, so far as regards the frontage of the farm lands, the Corporation should pay forty per cent. of the remainder of the cost of the work, including in that forty per cent. what would otherwise be the Corporation's share of the cost, and the property owners will pay the remaining sixty per cent.

Then so far as the land which has been subdivided into lots is concerned, the amount to be paid by the Highway Department should first be deducted, and the Corporation will then pay twenty-five per cent. of the remainder of the cost, including in that twenty-five per cent. the Corporation's share of the cost,

and the property owners will pay the remaining seventy-five per cent.

I further recommend that there be no cost to either party, and that \$15.00 be paid in law stamps upon the order by the municipality. This amount may be added to the cost of the work.

Respectfully submitted.

Toronto, Ont., July 12th, 1926.

(Sgd.) J. A. Ellis,

Commissioner.

I agree that this Report be adopted as the basis of the Board's Order.

Toronto, October 5th, 1926.

(Sgd.) A. B. Ingram, Vice-Chairman.

October 5th, 1926.

Order

Upon the application of the above-named applicant, upon reading the Report of A. B. Ingram, Esquire, Vice-Chairman, who heard the evidence adduced on behalf of all parties, Statements of Assets and Liabilities, Receipts and Disbursements and other material filed,

The Board orders that the applicant, the South Diagonal Telephone Company, Limited, be authorized to charge the following rates for telephone service, to take effect as from July 1st, 1926:

The above charges are subject to a discount at the rate of \$1.00 per annum on all amounts paid within thirty days from the date of rendering the account for same.

And the Board further orders that the charges for telephone service levied and collected by the applicant prior to the date of this Order shall be deemed to have been lawfully levied and collected and are hereby validated and confirmed.

And the Board makes no order for costs, save and except that the applicant shall pay \$5.00 for the Law Stamps required for this Order.

(Sgd.) A. B. Ingram, Vice-Chairman.

PROCEDURE FILE A-594

Application by the Township of London, under section 20 of "The Ontario Telephone Act, 1918," for authority to provide by by-law that the debentures to be issued to meet the cost of establishing the London Township Municipal Telephone System be extended over a period of fifteen years.

June 15th. Application and material filed.

July 5th. Hearing, pursuant to appointment, 2 to 2.30 p.m., Court House, London. Application granted.

July 12th. Order.

Upon the application of the above-named Corporation, upon hearing the evidence adduced on behalf of the applicant, and upon reading the petition of a majority of the subscribers to the telephone system of the municipality of the Township of London, and other material filed.

The Board orders that the Council of the Municipal Corporation of the Township of London is hereby authorized to provide by by-law that payment of the debentures to be issued to pay the cost of the work of establishing the London Township Municipal Telephone System may be extended over a period not exceeding fifteen (15) years.

And the Board makes no order for costs, save and except that the applicant

shall pay \$10.00 for the Law Stamps required for this Order.

(Sgd.) A. B. Ingram, Vice-Chairman.

PROCEDURE FILE A-595

Application by the Township of Sombra, under section 460 (9) (10) of "The Consolidated Municipal Act, 1922," for relief from the obligation to rebuild the bridge over the outlet end of Gooden's Creek on the road intersecting the south part of Lot 8, Con, 9, of said township.

June 15th. Application and material filed.

July 13th. Hearing, pursuant to appointment, 10 a.m. to 2 p.m., at the Court House, Sarnia. (Mr. Commissioner Ellis, authorized under section 9, chapter 186, R.S.O.) Judgment reserved. (See Reporter's Notes.)

PROCEDURE FILE A-597

In the matter of the application of the Village of Elora, under section 17 of "The Consolidated Municipal Act, 1922," for annexation thereto of certain lands owned by the Alabastine Co., Paris, Limited, and situated in the adjoining Township of Nichol.

June 16th. Application, copy of By-law 715, surveyor's description and blueprint plan, filed.

Oct. 5th. Hearing, pursuant to appointment, 9.30 to 11 a.m., Council

Chamber, Elora. Judgment reserved.

Oct. 7th. Application approved. (See letter to applicant's solicitor.)

Oct. 22nd. Approved draft Order filed.

Oct. 22nd. Order issued.

October 7th, 1926.

Dear Sir:

Having given further consideration to this matter, the Board has decided to approve the application for annexation of certain lands of the Alabastine Company, Paris, Limited, to the Village of Elora, the same to take effect on the first day of January, A.D. 1927.

Kindly prepare draft Order and submit same to Mr. Nicol Jeffrey, K.C.,

for his approval, and send to the Board so that Order can be issued.

The Board makes no order as to costs, but the applicant will pay \$15.00 to cover Law Stamp fee on the Order herein.

Yours very truly,

(Sgd.) A. B. INGRAM, Vice-Chairman.

Hon. Hugh Guthrie, K.C., Guelph, Ont.

P.S.—We are also advising Mr. Jeffrey of the Board's decision.

October 7th, 1926.

Order

Upon the application of the said applicant, and upon reading the copy of By-law No. 715 of the Council of the Corporation of the Village of Elora, passed on the 7th day of June, 1926, upon hearing what was alleged by counsel on behalf of the applicant and on behalf of the Alabastine Company, Paris, Limited, and by counsel on behalf of the Township of Nichol and Union School Section No. 8 of the Townships of Nichol and Pilkington, at a hearing held, pursuant to appointment, at the Council Chamber, in the Village of Elora, on the 5th day of October, 1926, proof of notice of such appointment having been duly given as directed by the Board, and judgment having been reserved until this day,

The Board orders and proclaims that the lands and premises in the Township of Nichol mentioned in the said petition and being described as follows: All and singular that certain parcel or tract of land and premises situate, lying and being in the Township of Nichol, in the County of Wellington and Province of Ontario, containing by admeasurement seventeen acres and twenty-four hundredths of an acre, including the Canadian Pacific Railway siding and sixteen acres clear of said siding be the same more or less, and being composed of Park Lot Number Four between David Street and the Grand River, and being part of broken Lot Number Five on the northwest side of the Grand River in the Township of Nichol, according to Registered Plan Number 246 made by R. M. Newman, P.L.S., and which may be more particularly known and described as follows: Commencing at the north angle of said Park Lot Number Four, being at the intersection of the south-westerly limit of the Concession Road between the Twelfth and Thirteenth Concessions in the Township of Nichol and also known as Charles Street, with the southerly limit of David Street, leading to the Village of Elora along the northerly limit of said park lot; thence along the said limit of David Street south sixty-two degrees, thirty minutes west, nine chains, eighty-four links to an angle in said street; thence south fifty-nine degrees, twenty minutes west, eight chains, five links to another angle in said street; thence south twenty-six degrees, six minutes west, three chains more or less to the division line between broken Front Lots Numbers Four and Five, being the townline between the Township of Nichol and the Village of Elora; thence along the said townline south forty-five degrees east, seven chains, seventy-six links more or less to the northeasterly bank of the Grand River; thence up stream following along said bank of river the several courses and distances thereof to its intersection with the said southwesterly limit of Charles Street or Concession Road; thence along same north forty-five degrees west seven chains, seventy links more or less to the place of beginning.

Bearing referred to Charles Street or Concession Road, assuming same to be $N.\ 45$ degrees west, be and the same are hereby annexed to the Village of Elora upon and subject to the following terms and conditions, namely:

1. The said lands shall be added to the Village of Elora as of January 1st,

1927.

2. That the taxes and rates for the year 1926 or any prior year on any of the lands included in the territory hereby annexed, which shall not have been collected before January 1st, 1927, shall be collected by and belong to the Township of Nichol, and all right to collect the same, including distress for non-payment, or if necessary, the sale of the said lands or any of them shall remain in the said Township as though this Order had not been made.

3. The Board does not make any order as to costs except that the applicant

shall pay \$15.00 to cover the Law Stamps on this Order.

(Sgd.) A. B. Ingram, Vice-Chairman.

PROCEDURE FILE A-604

Application by the London Street Railway Company, under section 250 of "The Ontario Railway Act," for removal of its tracks on that portion of Richmond Street lying north of Huron Street in the Township of London, County of Middlesex.

June 18th. Application filed.

July 5th. Hearing, pursuant to appointment, 2.30 to 4 p.m., Court House, London. Application granted.

July 9th. Draft Order filed and Order issued.

July 5th, 1926.

ORDER

Upon the application of the London Street Railway Company, under "The Ontario Railway Act" (R.S.O., 1914, chapter 185), section 250, for an Order permitting the said London Street Railway Company to take up and remove its tracks, ties, poles, wires and other equipment in connection with the operation of street cars on that portion of Richmond Street lying north of Huron Street in the Township of London, in the County of Middlesex, in the presence of Counsel for the London Street Railway Company and for the Municipal Corporation of the Township of London, and of Col. W. J. Brown, on behalf of the University of Western Ontario, and of His Worship Mayor John M. Moore, and W. P. Near, City Engineer, on behalf of the Corporation of the City of London, and upon reading the declaration of Joseph F. Pack, proving posting of the Notice of Hearing, and the declaration of John Gordon Gillanders, proving publication of the Appointment for Hearing, and upon hearing what was alleged by counsel aforesaid, and by Col. W. J. Brown on behalf of the University of Western Ontario,

1. This Board doth order that the London Street Railway Company be and it is hereby permitted to forthwith take up and remove its tracks, ties, poles, wires and all other equipment in connection with the operation of street cars on that portion of Richmond Street north of Huron Street in the Township of London.

2. And this Board makes no order as to costs except that the applicant company shall pay \$15.00 for Law Stamps on this Order.

(Sgd.) A. B. Ingram, Vice-Chairman.

PROCEDURE FILE A-612

Application by the Township of Sombra, under section 460 (9) (10) of "The Consolidated Municipal Act, 1922," for relief from rebuilding a bridge over Black Creek on the road between the 13th and 14th Concessions of the said Township and opposite Lot No. 19.

June 22nd. Application filed.

July 13th. Hearing, pursuant to appointment, 2 to 6 p.m., Court House, Sarnia. (Mr. Commissioner Ellis, authorized under section 9, chapter 186, R.S.O.) Judgment reserved. View to be had later if desired.

Sept. 28th. View, 9 to 11 a.m.

Oct. 1st. Report of Mr. Commissioner Ellis filed and adopted.

Nov. 9th. Order issued.

REPORT OF MR. COMMISSIONER ELLIS

As authorized under section 9 of "The Ontario Railway and Municipal Board Act (chapter 186, R.S.O.), I heard this application at the City of Sarnia on the 13th day of July, 1926. A considerable number of witnesses were heard.

The bridge in question is situate on the highway between Lot 19 in the 13th Concession and Lot 19 in the 14th Concession in the Township of Sombra. It was alleged that Percy Dawson was the owner of the east half of Lot No. 19 in the 13th Concession, containing about 100 acres; that Sarah Dawson (his mother) was the owner of the northwest quarter of said lot, containing about 60 acres; and that Charles Buck was the owner of the south half of Lot No. 19 in the 14th Concession, containing about 100 acres. The bridge is an old wooden one over Black Creek at the point of its intersection with the part of the highway mentioned.

The evidence showed to my satisfaction that the bridge is so damaged from dilapidation that it is necessary to rebuild in order to carry heavy traffic, and also that the rebuilding of it would entail a larger expenditure than would be reasonable having regard to the use that would be made of it if it were rebuilt. The estimated cost of rebuilding the bridge was stated in evidence to be about \$12,000.00, and this estimate was not disputed. From the evidence I also came to the conclusion that whilst the bridge was a convenience to the owners of Lots 19 in the 13th and 14th Concessions, it could not be considered as being required for the general public convenience.

Black Creek pursues a tortuous course and winds through the lots mentioned in such manner as to make a bridge a convenience for the owners of these lots in order to give them access from one part of their land to other parts. Therefore, it appeared to me to be a case where, if the application were granted, reasonable compensation should be made to the owners of the lots mentioned as a term of the relief asked for being granted.

At the hearing I suggested that the parties should endeavour to come to an agreement amongst themselves, and that in the event of their failing to do so, I would view the bridge and location in question before making any report to the Board.

The Board was subsequently advised that the owner of the south half of Lot 19 in the 14th concession had been offered and had accepted \$1,200.00 as compensation, but that it had been impossible to come to any agreement with the owner or owners of the east half and the northwest quarter of Lot 19 in the 13th Concession. The Board was also informed that Sarah Dawson was deceased and that the said Percy Dawson was now the owner of the land formerly owned by her. On the 28th day of September, 1926, pursuant to appointment, I therefore proceeded to view the bridge and location in question, accompanied by the solicitor for the township and Mr. Percy Dawson.

I agree that the compensation offered to and accepted by the owner of the

south half of Lot 19 in the 14th Concession is reasonable and proper.

I do not think, however, that the compensation offered to the owner of the east half and the northwest quarter of Lot 19 in the 13th Concession is sufficient.

After considering all the evidence adduced at the hearing and from my view, I have come to the conclusion that \$1,800.00 would be proper compensation to be paid to the owner of the east half and the northwest quarter of Lot 19 in the 13th Concession by reason of the access from one part of the land to the other being interfered with by the non-rebuilding of the bridge.

I therefore recommend that the application be granted upon condition that the township pay to the owner of the south half of Lot 19 in the 14th Concession the sum of \$1,200.09, and to the owner of the east half and the northwest quarter of Lot 19 in the 13th Concession the sum of \$1,800.00, as compensation.

The Township will also pay \$30.00, the Board's tariff fee for Law Stamps

to be affixed to the Order.

Dated at Toronto, this first day of October, 1926.

(Sgd.) J. A. Ellis, Commissioner.

Adopted as the Board's Order, 1st October, 1926.

(Sgd.) A. B. Ingram, Vice-Chairman.

October 1st. 1926.

ORDER

This application having come up for hearing on the 13th day of July, 1926, at the City of Sarnia, notice having been given as directed, pursuant to appointment, before Mr. Commissioner Ellis, he, having been authorized pursuant to section 9 of "The Ontario Railway and Municipal Board Act," R.S.O.. 1914, chapter 186, to report to the Board, in the presence of Counsel for the applicant and for Charles Buck and Percy Dawson, upon hearing the evidence adduced and what was alleged by Counsel aforesaid, and the bridge and location in question having been viewed on the 28th day of September, 1926, pursuant to appointment,

1. This Board doth order that the applicant, the Corporation of the Township of Sombra, be and it is hereby relieved from the obligation to rebuild the wooden bridge over Black Creek at the point of its intersection with the road between the 13th and 14th Concessions (and opposite Lot No. 19) in the said Township of Sarnia.

- 2. And this Board doth further order that the applicant, the Corporation of the Township of Sombra, do forthwith pay to Charles Buck the sum of twelve hundred dollars, and to Percy Dawson the sum of eighteen hundred dollars as damages by reason of the access from one part of the lands of each of them to the other part being interfered with by the non-rebuilding of the bridge.
- 3. And the Board makes no order as to costs except that the applicant pay \$30.00 for Law Stamps, the Board's tariff fee herein.

(Sgd.) A. B. Ingram, Vice-Chairman.

Procedure File A-626

Application by the Township of Etobicoke, under "The Township of Etobicoke Act, 1923" (14 Geo. V, chapter 62), for approval of its By-law No. 1995—Extension of Water Area No. 9.

June 29th. Application and material filed.

July 19th. Hearing, pursuant to appointment, 11 to 11.30 a.m., at Board's Chambers. (Mr. Commissioner Ellis, authorized under section 9, chapter 186, R.S.O.) Recommendation that application be granted, documents appearing to be in form and there being no opposition.

July 21st. Order.

July 19th, 1926.

Order

This application coming on for hearing before Mr. J. A. Ellis, Commissioner of this Board, on Monday, the 19th day of July, A.D. 1926, in the presence of Mr. George Willoughby, Counsel for the Applicants, and no one appearing in opposition to the application, upon hearing what was alleged by Counsel aforesaid, and the material filed, the Commissioner was pleased to direct that this application should stand over until his report to this Board, and the Commissioner having reported to the Board, and this Board concurring in such report this day,

The Board orders and certifies under and in pursuance of the provisions of the said Act, being chapter 62 of the Statutes of Ontario, 13-14 Geo. V, and amendments thereto, that the said By-law No. 1995, intituled "By-law No. 1995. A By-law of the Municipality of the Township of Etobicoke to extend or enlarge a defined section or area of the Municipality known as Water Area No. 9 as established by By-law No. 1611, and enlargements thereof by adding thereto the lands hereinafter defined and described, and to construct and extend the system of water mains and water works in Water Area No. 9 into the area hereinafter described for the benefit of the said Area," be and the same is hereby approved.

And the Board orders that a fee of \$10.00 for Law Stamps be paid on this Order.

(Sgd.) A. B. Ingram, Vice-Chairman.

PROCEDURE FILE A-637

In the matter of the petitions of Gerard Smith and others, under section 9 of "The Local Improvement Act," against the resurfacing by the Corporation of the Town of Dunnville of the following streets in the said town:

- (a) Niagara Street from Broad Street to Canal Street East:
- (b) Canal Street East and Lock Street, from Niagara Street to Cedar Street;
- (c) Lock Street from Cedar Street to Centre Street;
- (d) Bridge Street, from Canal Street to the Welland Canal Feeder;
- (e) Canal Street West from Lock Street to Main Street; and
- (f) Chestnut Street from Canal Street East to the Canadian National Railway.

July 2nd. Petitions filed.

July 20th. Hearing, pursuant to appointment, 10.30 a.m. to 1 p.m., at the Council Chamber, Dunnville. (Mr. Commissioner Ellis, authorized under section 9, chapter 196, R.S.O.)

July 21st. Report of Board's Engineer filed.

July 23rd. Report of Mr. Commissioner Ellis filed and adopted.

July 26th. Order.

July 21st, 1926.

REPORT OF THE BOARD'S ENGINEER

The Chairman,

The Ontario Railway and Municipal Board,
Toronto.

Sir:

Re Examination of Streets at Dunnville

I went to Dunnville with Mr. Ellis of your Board yesterday and made an examination of the surface of Lock Street, Canal Street, East and West, Chestnut Street, Bridge Street and Niagara Street, in order to advise your Board as to whether, in my opinion, the work proposed to be done on them is necessary. I will now take these streets in order, as follows:

1. Lock Street. This street has a tar macadam surface from a point about 100 feet west of Chestnut Street to Centre Street. This surface is very much worn and uneven except for the last two blocks west. The length of this paving is about 3,400 feet, and, in my opinion, to put a new surface of the same material on would cost a considerable sum and when done would have to be frequently repaired in order to maintain an even surface under heavy traffic. I understand there is a good layer of macadam about eight inches thick which could be used as a base for a substantial surface on the top of it.

2. Canal Street East. This street extends from Bridge Street to Niagara Street and is of the same material as Lock Street. The surface is very uneven and must sooner or later have considerable repairs made to it if used for heavy traffic. The remarks made regarding the surface on Lock Street will also apply

to this. The length of this street is approximately 2,200 feet.

3. Niagara Street. The surface on this street is also macadam and is full of holes and badly worn throughout. Considerable work will have to be done

in the shape of repairs if the same surface is retained, and I doubt if it would be worth the cost. Its length is about 300 feet.

4. Canal Street West. From Lock Street to the Welland Canal; length is about 500 feet; has a concrete pavement about eight inches thick. The surface is very uneven and cracked and has been patched in places. The only way to make a good street of this is to cover it with asphalt. These remarks also apply to the concrete surface of this street from where it begins about 100 feet west of Chestnut Street to the end on Canal Street East at the T. H. & B. Station.

5. Chestnut Street and Bridge Street. The street surface is concrete about eight inches thick and is very uneven and should be repaired with a good asphalt surface as that would appear the only efficient means of making a satisfactory

driveway. The length of these streets is about 1,400 feet.

In conclusion, after looking over all these streets, I am of opinion that the cheapest and best way in the end will be to use an asphalt surface throughout. The initial cost may be somewhat higher than trying to patch the present surfaces up, but when once done, and if the work is properly carried out, there should be little or no expense for maintenance for a very considerable time.

Yours truly,

(Sgd.) H. W. MIDDLEMIST.

REPORT OF MR. COMMISSIONER ELLIS

As authorized by the Board, pursuant to the provisions of Section 9 of "The Ontario Railway and Municipal Board Act," the undersigned, pursuant to appointment, heard this application on the 20th July, 1926, at Dunnville, and now reports as follows:

I heard what was alleged by Counsel for both the Petitioners and the Town, and the evidence adduced by both parties. I also viewed the portions of the highways in question accompanied by H. W. Middlemist, Esquire, the Board's

Engineer, and representatives of both parties.

The proposed work is the resurfacing with asphalt of the portions of the highways above mentioned. These highways are so linked together that they can be treated as one work. The total estimated cost of the proposed work is \$49,732.80. of which it is proposed the properties fronting on the work should pay \$37,683.49 and the Corporation \$12,049,31. The amount proposed to be paid by the Corporation includes only that portion of the cost which the Corporation is obliged to pay under "The Local Improvement Act" for street intersections and flankages.

Two objections were raised by the Petitioners, the first being that the proposed work was unnecessary and that all that was required was ordinary repairs to the portions of the highways in question. It was admitted by all parties that the bases of these portions of highways consisted of concrete or macadam and that new bases were not required. With regard to this objection the Board's Engineer has made a report to the Board, which is annexed hereto. With this report I agree, and consequently recommend that this objection be not entertained.

The other objection raised was that in any event the Petitioners should not be called upon to pay the full cost of the work less only what the Corporation was bound to pay under "The Local Improvement Act" as proposed. I think some effect should be given to this contention. The portions of the highways

which it is proposed to resurface are either in the business section of the town or constitute approaches to it. The scheme as a whole appears to be a desirable one, but one which to some extent will be of general rather than purely local benefit. It will be of assistance no doubt in attracting tourist motor traffic to Dunnville. Canal Street East and Lock Street run close to and are parallel with the Provincial Highway, which runs through Dunnville. I think it is clear that when the proposed work is completed these streets will be largely used as an alternative to the Provincial Highway.

Under all the circumstances I recommend that in addition to the Corporation's portion of the cost the Corporation be ordered to pay one-third of what

would otherwise be charged against the properties fronting on the work.

I further recommend that there be no costs to either party, but that \$15.00 be paid in Law Stamps by the Corporation upon the Order. This amount may be added to the cost of the work.

Respectfully submitted,

(Sgd.) J. A. Ellis, Commissioner.

Toronto, Ont. July 23rd, 1926.

I agree that this Report be adopted as the basis of the Board's Order.

(Sgd.) A. B. INGRAM, Vice-Chairman.

July 23rd, 1926.

Order

This application coming on for hearing before Mr. J. A. Ellis, Commissioner, on Tuesday, the 20th day of July, 1926, in the presence of Counsel for the Petitioners and for the Town of Dunnville, upon viewing the site of the proposed work, on hearing the evidence adduced, and what was alleged by Counsel aforesaid, the Commissioner was pleased to direct that this application should stand until his Report to this Board, and the Commissioner having reported to this Board, and this Board concurring in such Report this day:

- 1. It is ordered that the Town of Dunnville be and are hereby enabled to proceed with the said proposed work;
- 2. It is further ordered that in addition to the Corporation's portion of the cost, the Town of Dunnville be ordered to pay one-third of the cost of the proposed work which would otherwise be assessed against the lands of the abutting owners;
- 3. This Board doth not make any Order as to costs except that the Town of Dunnville shall pay \$15.00 for Law Stamps to be placed on this Order, which amount may be added to the cost of the work.

(Sgd.) A. B. Ingram, Vice-Chairman.

Application by the Township of Etobicoke, under The "Township Etobicoke Act, 1923," (14 Geo. V., Chapter 62), for approval of its By-law No. 1996—Extension of Water Area No. 4.

July 8th. Application and material filed.

July 19th. Hearing, pursuant to appointment, 11 to 11.30 a.m., at Board's Chambers. (Mr. Commissioner Ellis authorized under Section 9, Chapter 186, R.S.O.) Adjourned "sine die" to be brought up again on ten days' notice by Township Council.

July 31st. By-law No. 2028 filed (in lieu of By-law No. 1996) creating

a new water area.

Sept. 2nd. Hearing, pursuant to adjournment 11 to 11.30 a.m., at the Board's Chambers.

Sept. 2nd. Report of Mr. Commissioner Ellis, recommending approval of By-law 2028, filed and adopted.

Sept. 2nd. Order.

REPORT OF MR. COMMISSIONER ELLIS

I heard this application on the 19th July last, and adjourned it in order that the Township Council might pass a new By-law for a considerably less area than that originally proposed.

The Council gave such a By-law a first and second reading and the matter

came before me again to-day.

The new By-law now covers only a water main to serve the lots fronting on both sides of Orchard Park Drive. The new By-law was opposed by the owner of a number of the lots on the ground that a large number of the lots which would be benefited are vacant and that a water supply is not required at present.

The two readings of the By-law were passed by the Council unanimously. The estimated cost of the work is \$3,350.00, and there are fifty-one lots to be assessed. The owners of the lots which are to be specially assessed number seventeen, and of these twelve signed a petition to the Municipal Council for the work (Ex. 2). The total assessment of the lots to be specially assessed is \$11,375.00, and the owners who signed the petition represent \$6,480.00.

It appears to me that the general principles of the Local Improvement Act should be followed. If the work had been initiated by the Municipal Council under section 9 of that Act, a petition against the work could have been presented to the Board providing it was signed by a majority of the owners representing at least one-half the value of the lots which are to be specially assessed therefor. In this case it is clear that such a petition could not have been presented.

I therefore recommend that the By-law be approved.

Respectfully submitted,

(Sgd.) J. A. Ellis, Commissioner.

Toronto, Sept. 2nd, 1926. Adopted.

(Sgd.) A. B. INGRAM, Vice-Chairman.

September 2nd, 1926.

Order

Upon the application of the said Corporation, and upon reading the Notice of Application, and Declaration of Stephen Barratt, Clerk of the said Township, and the other material filed, and it appearing that Notice of the Hearing of this application has been duly given as directed by the Board, and this Application having been heard pursuant to such notice by Mr. Commissioner Ellis, and his Report on such Hearing having been duly adopted as the basis of the Board's Order herein.

The Board orders and certifies under and in pursuance of the Special Act, being Chapter 62 of the Statutes of Ontario, 13-14 George V., being a special Act entitled "The Township of Etobicoke Act, 1923" and amendments thereto, that the said By-law No. 2028, intituled "By-law No. 2028. A By-law of the Municipality of the Township of Etobicoke to set aside and designate a defined section or are a in the Township of Etobicoke and to construct and extend the system of water mains and water works in the area hereinafter described for the benefit of such defined area," be and the same is hereby approved.

(Sgd.) A. B. Ingram, Vice-Chairman.

Application by the City of Hamilton, under section 401 (3) of "The Consolidated Municipal Act, 1922," for approval of its By-law No. 3343 to amend its By-law No. 14 to provide for the weighing of coal.

July 16th. Application and material filed.

Sept. 9th. Hearing, pursuant to appointment, 10.30 to 11 a.m., Council Chamber, Hamilton. Application to be granted when By-law amended providing for weighing on City scales. Amending By-law to be submitted to Board and Order to go without another hearing. (See Reporter's Notes.)

PROCEDURE FILE A-672

In the matter of the Petition of Canadian Libby-Owens Sheet Glass Co., Ltd., under section 9 of "The Local Improvement Act," against the construction in the City of Hamilton of an asphalt and brick roadway on Kenilworth Avenue between Barton Street and Beach Road.

July 19th. Petition (letter) filed.

July 27th. Supplementary Petition filed by The Hamilton Jockey Club, Ltd., and others.

Sept. 9th. Hearing, pursuant to appointment, 11 a.m., to 12 m., at Council Chamber, City Hall, Hamilton. Petition dismissed on understanding that work not to be proceeded with until 1928. City Solicitor to take out Order. (See Reporter's Notes.)

Oct. 13th. Draft Order filed.

Oct. 13th. Order issued.

September 9th, 1926.

ORDER

Upon the Petition of The Hamilton Jockey Club, Limited, and others, to this Board against the construction as a Local Improvement of proposed asphalt and brick pavement on Kenilworth Avenue from Barton Street to Beach Road, in the City of Hamilton, and upon hearing the evidence adduced and what was alleged by the Petitioners and by Counsel for the Corporation of the City of Hamilton.

This Board doth order that the above Petition be and the same is hereby dismissed.

And it is further ordered that the Corporation of the City of Hamilton shall not proceed with the construction of the said work as a local improvement under the provisions of The Local Improvement Act before the first day of January, 1928.

And this Board doth further order that there shall be no costs to any party to the application, but the Corporation of the City of Hamilton shall pay the fee of \$10.00 on this Order.

And it is further ordered that the above sum may be added to the cost of the work.

(Sgd.) A. B. Ingram, Vice-Chairman.

PROCEDURE FILE A-675

Application by The Rose Telephone Co., Ltd., under section 88 of "The Ontario Telephone Act, 1918," for authority to increase charges for service.

July 20th. Application and material filed.

Sept. 22nd. Hearing, pursuant to appointment, 10.30 a.m., Town Hall, Desbarats. (Vice-Chairman authorized under Section 9, Chapter 186, R.S.O.)

Oct. 6th. Report of Vice-Chairman filed and adopted.

Oct. 6th. Order—Charges approved from Jan. 1st, 1926.

REPORT

The undersigned, having heard the evidence of all parties relative to this application, recommends that the annexed Order be adopted as the Order of the Board.

(Sgd.) A. B. INGRAM,

Vice-Chairman.

Toronto, October 6th, 1926.

October 6th, 1926.

ORDER

Upon the application of the above-named Applicant, upon reading the Report of A. B. Ingram, Esquire, Vice-Chairman, who heard the evidence adduced on behalf of all parties, Statements of Assets and Liabilities, Receipts and Disbursements and other material filed.

The Board orders that the Applicant, The Rose Telephone Company, Limited, be authorized to charge \$14.00 per annum for Rural Party Line Service,

to take effect as from January 1st, 1926.

And the Board further orders that the charges for telephone service levied and collected by the Applicant prior to the date of this Order shall be deemed to have been lawfully levied and collected and are hereby validated and confirmed.

And the Board makes no Order for costs, save and except that the Applicant

shall pay \$5.00 for the Law Stamps required for this Order.

(Sgd.) A. B. INGRAM, Vice-Chairman.

In the matter of the Petition of Alex. Paterson and others, under section 9 of "The Local Improvement Act," against the construction in the City of Windsor of an asphalt pavement on Ouellette Avenue, from Shepherd Avenue to Tecumsell Road.

July 22nd. Petition filed.

Aug. 17th. Hearing, pursuant to appointment, 10 a.m. to 12.05 p.m., Council Chamber, City Hall, Windsor. (Vice-Chairman authorized under Section 9, Chapter 186, R.S.O.)

Sept. 2nd. Report of Vice-Chairman filed.

Sept. 2nd. Draft Order filed.

Sept. 3rd. Order issued.

REPORT OF VICE-CHAIRMAN

The undersigned having heard this application pursuant to Section 9, Chapter 186, R.S.O., 1914, at the City Hall, in the City of Windsor, on the 17th day of August, A.D., 1926, at the hour of ten o'clock in the forenoon (Standard time).

Mr. R. S. Rodd appeared for the Petitioners and F. D. Davis, Esq., K.C., appeared for the City.

The sufficiency of the Petition and the filing of same within the required statutory time was evidenced by the Certificate of the City Clerk.

This portion of Ouellette Avenue to be improved is almost exclusively residential. The width of the street from street line to street line is said to be 125 feet, and the residences on each side of the street are located some distance back from the street line. The pavement has been broken up in the centre in order to lay down a double railway track construction, and it is the intention to increase the width of the paved portion from thirty-six feet to fifty feet from Shepherd Avenue to Tecumseh Road. The present pavement is said to be down fourteen years, the lifetime of which was declared to be ten years, and the necessity for this work is due to double tracking in order to accommodate the increased traffic, this street being one of Windsor's main thoroughfares.

The Engineer's estimate of the cost of the work is as follows: \$51,487.00, lifetime twelve years, payable in ten annual instalments; the City as a whole to contribute \$6,133.00, the balance \$45,354.00 to be charged to private frontage. The total private assessable frontage is 3,037 feet, six inches; the estimated special rate per foot frontage is \$14.90, and the estimated annual rate per foot frontage is \$1.95.

After having heard the evidence of the witnesses and what was said by Counsel for the Petitioners and the City, I was convinced that the above apportionment of the cost of this work was not an equitable adjustment of the cost as between the parties hereto, and there and then stated that I would recommend in my report to the Board that the total cost of the work (exclusive of the item for street lighting) be divided in two, each party to pay half of its cost, or in other words each to pay fifty per cent of the total cost of the work, the total cost to include the Corporation's share as provided under the Statute, and I so recommend.

Counsel for the parties appeared to be satisfied with this adjustment of the cost.

There should be no costs other than a fee of \$15.00 for Law Stamp on the Order herein, the same to be made a charge against the work.

The Order should be drawn by Mr. Davis and submitted to Mr. Rodd for his approval, and in case of dispute to be settled by the Board.

Respectfully submitted,

(Sgd.) A. B. Ingram, Vice-Chairman.

Approved as the basis of the Board's Order herein.

(Sgd.) J. A. Ellis,

Commissioner.

Toronto, the 2nd day of September, A.D., 1926.

September 2nd, 1926.

ORDER

Upon the application of the above-named Applicants, and upon hearing evidence adduced on their behalf and evidence on behalf of the Corporation of the City of Windsor, and it appearing that the Petition against the said proposed work is sufficiently signed:

1. The Board orders that one-half of the total estimated cost of said proposed work in increasing the width of Ouellette Avenue within the said limits to fifty feet shall be payable by and assessable against the owners of lands abutting upon the said proposed work, and that the remaining half of said total cost shall be payable by the Corporation of the City of Windsor, and that any By-law hereafter passed by the Corporation of the City of Windsor under the said "Local Improvement Act" as to payment of said work shall provide that the owner's portion of the total cost shall be one-half of the whole cost and the Corporation's portion of said total cost shall be the other half of same.

2. And the Board further orders that of the said total estimated cost of \$51,487.00—\$25,743.50 shall be the owner's portion, and \$25,743.50 shall be the City's portion of said cost; the City's portion of said cost to include \$6,133.00 mentioned in Notice given on behalf of the City under Section 9 of said Act;

3. And the Board makes no Order for costs save and except that the Respondent, the Corporation of the City of Windsor, shall pay \$15.00 for Law Stamp réquired for this Order, and the same may be included in the cost of the work.

(Sgd.) A. B. Ingram, Vice-Chairman.

PROCEDURE FILE A-685

In the matter of the Petition of Mabel M. Scott (Chas. Scott Estate) and others, under section 9 of "The Local Improvement Act," against the construction in the City of Windsor of an asphalt pavement on Ouellette Avenue, from Erie Street to Shepherd Avenue.

July 24th. Petition filed.

Aug. 11th. Hearing, pursuant to appointment, 10 a.m. to 12.05 p.m., Council Chamber, City Hall, Windsor. (Vice-Chairman authorized under Section 9, Chapter 186, R.S.O.)

Sept. 2nd Report of Vice-Chairman filed.

Sept. 15th. Report of Vice-Chairman adopted.

Nov. 2nd. Hearing, pursuant to appointment, 11 a.m. to 12 m., at Board's Chambers, to hear argument as to whether or not Clerk's certificate is final and conclusive. Appeal dismissed. (No costs or law stamps.)

REPORT OF VICE-CHAIRMAN

The undersigned having heard this application pursuant to Section 9, Chapter 186, R.S.O., 1914, at the City Hall, in the City of Windsor, on the 17th day of August, A.D., 1926, at the hour of ten o'clock in the forenoon (Standard time), when R. S. Rodd, Esq., appeared for the Petitioners, and F. D. Davis, Esq., K.C., for the City.

The sufficiency of the Petition and the filing of same within the required statutory time were evidenced by the certificate of the City Clerk dated the 29th day of July, 1926, and received by the Board on the 30th day of July, 1926. On the 3rd day of August the Board issued and directed service of its appointment for the hearing herein on the 17th day of the same month.

At the hearing Mr. Davis objected to the sufficiency of the Petition, claiming that the certificate of the City Clerk was issued in error and should have stated that the Petition was not sufficiently signed. Entertaining grave doubts as to the legality of the objection raised by Mr. Davis I noted his objection and proceeded to hear the application.

Since the hearing the City of Windsor has filed material alleging that the City Clerk's certificate was issued in error and should have certified that the Petition herein was not sufficiently signed.

In view of section 16 of "The Local Improvement Act" which provides that: "(1) The sufficiency of a petition for or against a work shall be determined by the Clerk, and his determination shall be evidenced by his certificate and when so evidenced shall be final and conclusive," and following the judgment of Draper, C. J., in "In the matter of George Michie and the Corporation of the City of Toronto," 11 Upper Canada Common Pleas p. 379, I report that the sufficiency of the Petition herein is concluded by the City Clerk's certificate filed with the Board as above mentioned, and that the Board has now no jurisdiction to enquire into the sufficiency of such Petition.

As to the disposition of this application from the evidence adduced, and what was said by Counsel, I find that this portion of Ouellette Avenue is almost exclusively residential; the street is a very wide one and the buildings are located some distance back from the street line. The paved portion is thirty-six feet wide and the pavement is broken up in the centre in order to lay down a double track railway, thus necessitating the widening of the paved portion from thirty-six feet to fifty feet in width. The latter width will be in keeping with that portion of the street lying between Erie Street and the River, also from Shepherd Avenue to Tecumseh Road.

The estimated cost of the work as given by the Engineer is \$135,186.00, the lifetime twelve years, payable in ten annual instalments; the City as a whole to contribute \$37,431.00; the balance of the sum of \$97,755.00 to be charged to private frontage. The private assessable frontage is 6,290 feet, six inches, and the estimated special rate per foot frontage is \$15.54, and the estimated annual rate per foot frontage is \$2.0125.

In my opinion a more equitable adjustment of the cost of this improvement would be to take the total cost of the work, including the Corporation's share as provided under "The Local Improvement Act," but excluding the item of

\$16,000.00 for lighting purposes, and then dividing the total cost in two, the City paying half and the property owners the other half, or in other words each of the

parties hereto to pay fifty per cent of the total cost of the work.

I may add that a similar division of the cost of the other improvements mentioned above was made owing to the belief that a pavement thirty-six feet wide was quite sufficient for the needs and accommodation of the residents of the street, and that the City as a whole should pay for the additional cost over and above the cost of what was actually required for the residents of the street, especially as Ouellette Avenue is considered to be one of the main thoroughfares of the City of Windsor.

I recommend that the foregoing adjustment of the cost of the work be adopt-

ed by the Board.

There should be no costs other than the City of Windsor pay \$15.00, the Board's fee for Law Stamp on the Order, and charge the same to the work specified herein.

Respectfully submitted,

(Sgd.) A. B. INGRAM, Vice-Chairman.

Toronto, the 2nd day of September, A.D., 1926. Adopted Sept. 15th. 1926.

Procedure File A-692

In the matter of the Petition of Frances M. Pawley and others, under section 9 of "The Local Improvement Act," against the construction as a local improvement of a reinforced concrete bridge over the west branch of the Don River on Don Boulevard within the Township of North York.

Aug. 6th. Petition filed.

Oct. 12th. Hearing, pursuant to appointment, 11 a.m. to 1.55 p.m., at Board's Chambers. Judgment reserved. (See Reporter's Notes.)

Oct. 21st. Judgment delivered. (Petition allowed.)

Dec. 22nd. Approved draft Order filed.

Dec. 22nd. Order issued.

JUDGMENT

This is a Petition of certain owners of property abutting on Don Boulevard against the construction of a reinforced concrete bridge over the west approach of the Don River on Don Boulevard within the Township of North York.

Upon hearing the evidence adduced, and upon considering the material filed herein, including the report of the Board's Engineer in connection with the bridge in question, and upon hearing counsel for the Petitioners and for the Township of North York, and upon considering the proposed apportionment of the cost of the work, the Board is of the opinion that the Petition should be allowed.

In view of the probable future extension of Don Boulevard to connect up with Bathurst Street, whereby other property owners could be assessed for their part of the cost of a bridge, property owners now affected would appear to be overburdened under the apportionment suggested by the Township, and it would appear that the proposed bridge is unsuitable.

There will be no Order as to costs except that the Township of North York shall pay \$10.00, the Board's tariff fee for Law Stamp, on the Order herein.

(Sgd.) A. B. Ingram, Vice-Chairman.

I agree.

(Sgd.) J. A. Ellis, Commissioner.

Dated at Toronto the 21st day of October, 1926.

October 21st, 1926.

ORDER

This Petition having come up for hearing on the 12th day of October, 1926, at the City of Toronto, in the presence of Counsel for the Petitioners and for the Township of North York, and upon hearing the evidence adduced, and upon the report of the Engineers of the Board, and what was alleged by Counsel aforesaid,

- 1. This Board doth order that the petition of Frances M. Pawley and others under section 9 of the Local Improvement Act against the construction as a local improvement of a reinforced concrete bridge over the west branch of the Don River on Don Boulevard within the Township of York, be and the same is hereby allowed.
- 2. And the Board makes no Order as to costs except that the said Township of North York shall pay \$10.00 for Law Stamps, the Board's tariff fee herein.

(Sgd.) A. B. Ingram, Vice-Chairman.

PROCEDURE FILE A-693

Application by the Commissioners for the Telephone System of the Municipality of Dummer, under sections 13 and 19 of "The Ontario Telephone Act, 1918," for authority to issue supplementary debentures to meet the cost of completing the establishment and extension of The Dummer Municipal Telephone System.

PROCEDURE FILE A-704

Application by the Public Utilities Commission of the City of Port Arthur, under section 250 of "The Ontario Railway Act," for approval of plan of extension of the Port Arthur Municipal Railway on Hodder Avenue north (to "Sheep ranch").

Aug. 21st. Application and blue print plan filed.

Aug. 30th. Engineer's Report filed.

Oct. 1st. Plans approved and certified.

Oct. 2nd. Memorandum by Vice-Chairman filed.

August 27th, 1926.

Engineer's Report

Re Port Arthur Civic Railway

I have examined Plan No. 1154, prepared by the City Engineer's Office, Port Arthur, showing a proposed single track extension of the Port Arthur Civic Railway together with a profile from the end of the existing line on Hodder Avenue to the terminal loop at the north line of the Old Sheep Ranch.

This plan is satisfactory, and I therefore recommend its approval by your

Board.

Yours truly,

MEMORANDUM

Re Extension of the Port Arthur Municipal Railway— Hodder Avenue North.

D. J. Cowan, Barrister, Port Arthur, acting for the Public Utilities Commission of Port Arthur, notified the Board on the 27th May, 1926, that they were contemplating the extension of their street railway from Hodder Avenue North to the terminal at the north line of the old sheep ranch. On the 2nd of June I advised him what would be required to be filed with the Board in order to obtain the Board's approval of such extension. On the 18th of August, plans were filed with the Board, but in the meantime the railway extension was constructed without first obtaining the approval of the Board to the Plan.

On the 27th of September I examined the extension of the railway in company with an official of the Commission, and to all appearances the construction of

the railway extension, which includes a loop, seems to be satisfactory.

The plan was submitted to the Board's engineer, and he reported it as being

satisfactory in so far as the plan itself is concerned.

While in conversation with the Manager, Mr. Brackinreid, he informed me that at the present time there were some six hundred fares collected daily from the employees of the large industry located there who are the users of this extension, and he also stated that the Corporation are expecting another large industry to be located in that neighbourhood, the result of which would be a very much increased traffic over this extension.

The Board, not having had an opportunity to express an opinion before the extension was constructed as to whether or not it would be a paying proposition, do not assume any responsibility in that connection.

(Sgd.) A. B. Ingram, Vice-Chairman.

Dated at Toronto, October 2nd, 1926.

PROCEDURE FILE A-707

In the matter of the Petition of T. L. Moore, Canadian Libby-Owens Sheet Glass Co., and others, under section 9 of "The Local Improvement Act," against the construction of a cement curb on Kenilworth Avenue (east side) from Beach Road to end of walk opposite McAnulty Blvd., in the City of Hamilton.

Aug. 23rd. Petition filed.

Sept. 9th. Hearing, pursuant to appointment, 11 a.m. to 12 m., Council Chamber, Hamilton. Application dismissed. (See Reporter's Notes.)

Oct. 13th. Draft Order filed.

Oct. 13th. Order issued.

September 9th, 1926.

ORDER

Upon the petition of Traiton L. Moore and others to this Board against the construction as a Local Improvement of proposed cement curb on Kenilworth Avenue, east side, from Beach Road to end of walk opposite McAnulty Boulevard, in the City of Hamilton, and upon hearing the evidence adduced and what was alleged by the Petitioners and by Counsel for the Corporation of the City of Hamilton,

This Board doth order that the above Petition be and the same is hereby dismissed.

And it is further ordered that the Corporation of the City of Hamilton shall not proceed with the construction of the said work as a local improvement under the provisions of The Local Improvement Act before the 1st day of January, 1928.

And this Board doth further order that there shall be no costs to any party to the Application, but the Corporation of the City of Hamilton shall pay the fee of \$10.00 on this Order.

And it is further ordered that the above sum may be added to the cost of the work.

In the matter of the Petition under section 9 of "The Local Improvement Act," of Murphy-Gamble, Limited, et al., against Ottawa Local Improvement—resurfacing of Sparks Street, between Bank Street and Bronson Avenue.

Aug. 24th. Petition filed.

Sept. 3rd. Hearing, pursuant to appointment, 10 to 10.30 a.m., at Council Chamber, City Hall, Ottawa. (Mr. Commissioner Ellis authorized under Section 9, Chapter 186, R.S.O.)

Sept. 7th. Report of Mr. Commissioner Ellis filed and adopted.

Sept. 10th. Draft Order filed.

Sept. 10th. Order issued.

REPORT OF MR. COMMISSIONER ELLIS

I heard this Petition at the City of Ottawa, on the 3rd inst. pursuant to appointment.

It was admitted by the Petitioners that the work was necessary and the only question which was argued was that as the street is a main thoroughfare the Corporation should pay a larger proportion of the cost than was proposed.

The estimated cost of the work was \$19,141.00, of which it was proposed that the land abutting on the work should pay \$16,153.93, and the Corpor-

ation should pay \$2,987.07.

In my view Sparks Street is a main thoroughfare of the City of Ottawa. It is parallel to and one block away from Wellington Street. These two streets converge at the westerly end. A large portion of the traffic which goes over the interprovincial bridge at the Chaudiere must pass over this portion of Sparks Street or along Wellington Street.

In view of all the circumstances I recommend that the land to be specially assessed for the work should pay sixty per cent. of the total cost and the Corporation should pay forty per cent, including in the Corporation's share that portion of the cost which would in any event have to be paid by the Corporation under "The Local Improvement Act."

I also recommend that the Corporation pay \$15.00 for Law Stamps on the

Order herein, the cost of which be charged to the work.

Respectfully submitted,

(Sgd.) J. A. Ellis, Commissioner.

Toronto, Sept. 7th, 1926. Adopted.

(Sgd.) A. B. Ingram, Vice-Chairman.

September 7th, 1926.

Order

The above Petition having come on for hearing at a special sittings of the Board, held in the Council Chamber in the City of Ottawa on Friday, the 3rd September, 1926, before Mr. Commissioner Ellis, duly authorized as provided by section 9 of The Ontario Railway and Municipal Board Act, in the presence

of certain of the said Petitioners and of the Solicitor and Engineer of the City of Ottawa, and the said Commissioner having reported upon the said matter to the Board, and the Board having adopted such Report as the basis of its Order herein;

It is ordered:

- 1. That the Local Improvement Report Number 253-C of the Corporation of the City of Ottawa, providing for the resurfacing of the asphalt pavement on Sparks Street, from Bank Street to the Westerly limit of Lot 18, and dated the 13th day of May, 1926, be amended by providing that the said Corporation should pay forty (40) per centum of the total cost of such work, including in the Corporation's share that portion of the cost thereof which would in any event have to be paid by the Corporation under The Local Improvement Act, and that the lands to be specially assessed for the work should pay sixty (60) per centum of the total cost thereof and that save as amended the said Report is hereby confirmed.
- 2. The said Corporation shall affix Law Stamps to the amount of Fifteen Dollars (\$15.00) to this Order in payment of the fees of the Board upon the said hearing, and shall charge such expenditure to the cost of the said Local Improvement work.

(Sgd.) A. B. Ingram.

Vice-Chairman.

PROCEDURE FILE A-713

In the matter of the Application of the Town of New Toronto, under section 85 of "The Highway Improvement Act, 1926," to determine the amount or proportion which shall be contributed by the Municipal Corporation, Commission or Company, owning or operating the Street Railway or Electric Railway on the Toronto and Hamilton Highway through the Corporation of the Town of New Toronto, towards the widening of the said Highway through the said Corporation of the Town of New Toronto.

Aug. 26th. Application and material filed.

Sept. 16th. Hearing, pursuant to appointment, 11 to 11.30 a.m., at Board's Chambers. Adjourned "sine die" pending transfer of Railway and question of double tracking. To be heard on one week's notice. (See Reporter's Notes.)

PROCEDURE FILE A-724

In the matter of the application of the Corporation of the Township of Etobicoke, under 14 Geo. V., Chapter 62, Ontario Statutes, 1923, for approval of its proposed By-law No. 2035—Extension of Water Area No. 7 (as established by By-law No. 1623) and construction of water mains etc., therein.

Sept. 1st. Application and material filed.

Sept. 22nd. Hearing, pursuant to appointment, 11 a.m., to 12.15. p.m., at Board's Chambers. (Mr. Commissioner Ellis authorized under Section 9, Chapter 186, R.S.O.)

Sept. 22nd. Report of Mr. Commissioner Ellis filed.

Sept. 30th. Order.

REPORT OF MR. COMMISSIONER ELLIS

I heard this application to-day, pursuant to appointment, due notice of which as directed by the Board was proved by the Applicant. Several of the owners interested appeared and were heard both for and against the application.

The estimated cost of the work is \$9,250.00. The owners of the lots which are to be specially assessed number thirty-five, of these twenty-four signed a Petition to the Municipal Council for the work (Ex. 3). The total assessment of the lots to be specially assessed is \$16,545.00, and the owners who signed the Petition represent \$10,520.00.

A Petition against the proposed extension (Ex. 4) was also signed by eleven

owners.

It appears to me that the proposed extension of the area is not an unreasonable one, and as a majority of the owners representing at least one-half the value of the lots which are to be specially assessed therefor have petitioned for the extension I think the application should be granted.

Respectfully submitted,

(Sgd.) J. A. Ellis,

Commissioner.

Toronto, September 22nd, 1926. Adopted.

(Sgd.) A. B. Ingram, Vice-Chairman.

September 30th, 1926.

Order

Upon the application of the said Corporation, and the Board having appointed the 22nd day of September, 1926, for the Hearing of such application, and notice of such appointment having been duly given as directed by the Board, and this application having been heard pursuant to such appointment by Mr. Commissioner Ellis, duly authorized under Section 9, Chapter 186, R.S.O., and his report on such hearing bearing date the 22nd day of September having been

adopted as the Order of the Board herein,

The Board orders and certifies under and in pursuance of the Special Act, being Chapter 62 of the Statutes of Ontario, 13-14 George V., being a special Act entitled "The Township of Etobicoke Act, 1923," and amendments thereto, that the said By-law No. 2035, intituled "By-law No. 2035. A By-law of the Municipality of the Township of Etobicoke to extend or enlarge a definite section or area of the Municipality known as Water Area No. 7 as established by By-law No. 1623, and enlargements thereof by adding thereto the lands hereinafter defined and described and to construct and extend the system of water mains and water works in Water Area No. 7 into the area hereinafter described for the benefit of the said Area," be and the same is hereby approved.

(Sgd.) A. B. Ingram, Vice-Chairman.

(Seal)

PROCEDURE FILE A-725

In the matter of the petition of Thomas Kinney (sole owner of the land), under section 21 of "The Consolidated Municipal Act, 1922," for the annexation

to the Town of Picton of certain lands in the Township of Hallowell occupied by the Kinney Canning Company.

Sept. 1st. Petition and other material filed.

Sept. 17th. Hearing, pursuant to appointment, 12.15 to 12.30 p.m., Council Chamber, Picton. (Mr. Commissioner Ellis, authorized under section 9, chapter 186, R.S.O.)

Sept. 20th. Report of Mr. Commissioner Ellis (See Notes of Hearing), recommending that application be granted. Filed.

Sept. 20th. Approved draft Order filed.

Sept. 30th. Report of Mr. Commissioner Ellis adopted.

Sept. 30th. Order issued.

30th September, 1926.

ORDER

Upon the petition of the above-named petitioner, and Mr. J. A. Ellis, Commissioner of the Board, duly authorized under section 9, chapter 196, R.S.O., having, pursuant to appointment, heard the evidence adduced and what was alleged by counsel for the parties interested, and the Report of the said Commissioner having been this day adopted as the Board's Order herein,

This Board doth order that that part of the Township of Hallowell owned by the petitioner, Thomas Kinney, and being the property occupied by the Kinney Canning Company, be annexed to the Town of Picton upon such terms and conditions as to the adjustment of assets and liabilities, taxation, assessment, improvements or otherwise as may be agreed upon pursuant to section 38 of "The Consolidated Municipal Act, 1922," a description of the said lands being as follows, namely: That certain parcel or tract of land and premises situate, lying and being in the Township of Hallowell, in the County of Prince Edward, and being composed of the northeasterly part of lot number 21 in the 3rd concession of the Military tract in the Township of Hallowell, described as follows: Commencing at the northeast corner of said lot; thence along the northerly limit of said lot three chains and ninety-nine links; thence in a southwesterly direction and parallel to the easterly limit of said lot seven chains and fifty-two links; thence in a southeasterly direction and parallel to the northerly limit of said lot three chains and ninety-nine links more or less to the easterly limit of said lot; thence along the easterly limit of said lot seven chains and fifty-two links more or less to the point of beginning, containing by admeasurement three acres more or less.

And this Board doth further order that the said annexation shall take effect upon the 1st day of January, 1927.

(Seal)

PROCEDURE FILE A-732

Application by the Town of Kenora, under section 88 of "The Ontario Telephone Act, 1918," for approval of new schedule of rates for telephone service to Town of Keewatin.

Sept. 8th. Application filed.

Sept. 27th. Hearing, pursuant to appointment, 9.30 to 11.30 a.m., at Town Hall, Kenora. (Vice-Chairman, authorized under section 9, chapter 186, R.S.O.) Judgment reserved.

Application by George E. Smith, under section 33 of "The Ontario Telephone Act, 1918," for determination of validity of special rate levied on his property by the Commissioners for the Chapple Municipal Telephone System.

Sept. 8th. Application filed.

Sept. 24th. Hearing, pursuant to appointment, 3 to 4 p.m., Town Hall, Emo. (Vice-Chairman, authorized under section 9, chapter 186, R.S.O.)

Oct. 16th. Report of Vice-Chairman filed and adopted.

REPORT

The undersigned attended at Emo on September 24th, 1926, for the purpose of hearing the evidence of all parties interested in this matter, the Board's Supervisor of Telephones System being also present. The parties were represented by counsel, as follows:

The applicant, by C. R. Fitch, Esquire. The respondent, by A. D. George, Esquire.

This matter arises out of a dispute between the applicant and respondent as to the right of the Municipality of Chapple to levy upon the property of the applicant for the payment of his share of principal and interest in respect of debentures issued to meet the cost of extending the Chapple Municipal Telephone System to his premises, in addition to the cost of maintenance, as provided by sections 29, 29a and 29c of "The Ontario Telephone Act," the applicant claiming that not having signed a petition praying for the establishment or extension of the said system, as provided by section 9 of the before-mentioned Act, he is not a subscriber as defined by subsection (g) of section 2 of the said Act.

In his evidence the applicant states that at no time has he signed any petition praying for the establishment of the system or the extension of the said system to his premises, but that while he was absent overseas in 1917, a telephone was installed upon his premises by the respondent at the verbal request of his

wife.

The applicant has paid for telephone service each year up to and including 1923. Since that time applicant has made no payment for service, and subsequently, in May, 1926, the Municipality seized his horses in order to secure payment of the amount due for telephone service in addition to general taxes in arrear, the application in this matter being filed by him on June 8th, 1926.

The applicant further states that in 1924 his premises, including the telephone, were destroyed by fire, and that upon his residence being rebuilt, another telephone was installed. Applicant further complains that his service has been very unsatisfactory. This complaint was supported by two other witnesses.

In his evidence on behalf of the respondent, Mr. Geo. Walter Hughes, Reeve of the Municipality and Chairman of the Commission, states that the applicant had signed the petition in 1916 prior to his departure overseas, and that it was in pursuance of such petition the telephone was installed. The respondent, however, has failed to produce a petition bearing the signature of "Geo. E. Smith," the applicant, the reason given for such failure being that such petition was in the custody of the then Clerk of the Municipality (E. Kernahan), who was killed overseas, and Mr. Kernahan's successors have been unable to trace that and other documents which were in his possession prior to his leaving Canada.

In view of the evidence of Mr. Hughes, a search has been made of the Board's files, from which it appears that the Municipality of Chapple has enacted three by-laws providing for the issue of debentures to meet the cost of establishing and extending the Chapple Municipal Telephone System. These are as follows:

By-law No. 210, dated March 15th, 1917, providing for an issue of \$10,000.00 for the establishment of the system.

By-law No. 256, dated April 26th, 1919, providing for an issue of \$2,500.00 for the extension of the system.

By-law No. 318, dated July 27th, 1922, providing for an issue of \$1,500.00, to meet the cost of certain reconstructions and alterations to the system.

It is significant that the name of "Geo. E. Smith" does not appear in the schedule to any of these by-laws containing the names of those subscribers upon whose property an annual levy must be made to meet the instalments of principal and interest in repayment of the debenture debt.

The omission of the name "Geo. E. Smith" from the schedule to the by-laws referred to would indicate that applicant is correct in his statement that he did not sign any petition praying for the establishment of the system before its extension to his premises. In any event it is clear that the Municipality has made no provision in any of the before-mentioned by-laws for the levying upon the property of the applicant for any portion of the instalments of principal and interest in repayment of the debt created by any such by-law.

In view of the foregoing the undersigned is of opinion:

- (1) That the applicant, "Geo. E. Smith," is not a subscriber to the telephone system of the Municipality of Chapple, as defined in subsection (g) of section 2 of "The Ontario Telephone Act, 1918," and, therefore, the Municipality cannot levy upon the property of the said applicant for payment of principal and interest and the cost of maintenance, as provided in sections 29, 29a and 29c of the said Act.
- (2) The applicant is liable to pay for telephone service during such period as he may have been furnished with same by the respondent, and the respondent may collect any amount due for such service in the same manner as other municipal taxes.
- (3) The applicant may at any time give notice in writing to the Secretary of the Chapple Municipal Telephone System that he wishes to discontinue taking the telephone service of the respondent, and directing that the telephone and other equipment be removed from his premises, the receipt of such notice by the secretary of the system shall release the applicant from all further liability to pay for service furnished after the date named by the applicant for the discontinuance of such service.

It is recommended that an Order be issued in accordance with the foregoing opinion.

With regard to applicant's complaint as to inefficient service, it would not appear that the quality of service differs from that furnished to other subscribers and renters of the respondent's system. The witnesses testifying in support of the applicant's evidence on this point were not subscribers to the respondent's system, being connected to the telephone system of the adjacent municipality of Emo. As their evidence referred to service over both systems, it is not possible to determine with accurancy as to which system was responsible for the inefficient service complained of. The applicant's premises are connected upon the same rural party line circuit as sixteen other telephones. This fact justifies the assumption that if there existed any serious cause for complaint the applicant

would have produced the evidence of some subscriber to this circuit in support of such complaint.

It must, therefore, be assumed that the applicant has enjoyed the same facilities in regard to telephone service as those furnished to the users of the other telephones connected upon his circuit, and that, therefore, the respondent is entitled to demand payment for such service. It may, however, be pointed out that "The Ontario Telephone Act" does not vest this Board with authority to adjudicate claims for payment for telephone service in cases where such claim is disputed by reason of alleged failure to furnish service during the full period covered by any such claim.

(Sgd.) A. B. INGRAM, Vice-Chairman.

REPORT

The undersigned, having heard the evidence of all parties relative to this application, recommends that the annexed Order be adopted as the Order of the Board.

(Sgd.) A. B. Ingram, Vice-Chairman.

Toronto, December 22nd, 1926.

December 22nd, 1926.

Order

Upon the application of the above-named applicant, upon reading copy of the said By-law, the Report of A. B. Ingram, Esquire, Vice-Chairman, who heard the evidence adduced on behalf of all parties, statutory declarations of John William Walker, Harry E. Marr and Robert A. Taylor, Town Clerk, Municipal Treasurer and Telephone Superintendent, respectively, all of the Town of Fort Frances, and other material filed,

The Board orders, pursuant to section 3 (e) of "The Ontario Telephone Act, 1918," that By-law No. 850 of the Corporation of the Town of Fort Frances, in the District of Rainy River, providing for the issue of debentures to an amount not exceeding Twenty-five thousand dollars (\$25,000.00), to meet the cost of certain reconstruction, replacements and alterations of the Fort Frances Municipal Telephone System, be and the same is hereby approved.

And the Board further orders that the applicant shall on or before the 20th day of January, April, July and October in each year, furnish a statement in respect of the Fort Frances Municipal Telephone System for the preceding

three months, setting forth the following particulars:

- (a) Gross income.
- (b) Expenditure upon operation, maintenance and management;
- (c) Net income;
- (d) Amount due for payment of interest and sinking fund; the first statement to be filed with the Board on or before April 20th, 1927.

And the Board makes no order for costs, save and except that the applicant shall pay \$10.00 for the Law Stamps required for this Order.

(Sgd.) A. B. Ingram, Vice-Chairman.

Application by the Minden Municipal Telephone System, under section 33 of "The Ontario Telephone Act, 1918," for determination of validity of special rate levied under Part II of the above Act, on property of A. G. Schofield, at the southwest corner of Gelert Road and St. Germain Street, Minden.

November 23rd, 1926.

Order

Upon the application of the above-named applicants, upon reading the Report of A. B. Ingram, Esquire, Vice-Chairman, who heard the evidence adduced on behalf of the applicants and A. G. Schofield, the said application and other material filed,

The Board Orders and determines, pursuant to section 33 of "The Ontario Telephone Act, 1918":

1. That A. G. Schofield is a subscriber, as defined by subsection (g) of section 2 of "The Ontario Telephone Act, 1918," to the Telephone System of the Municipality of Minden.

2. That an annual special rate may be levied and collected upon the property of the said A. G. Schofield, situate at the southwest corner of Gelert Road and St. Germain Street, Minden, each year for the years 1924 to 1933, inclusive.

3. That all special rates heretofore and hereafter levied as herein provided upon the property of the said A. G. Schofield under the provisions of sections 29, 29a, 29c and 30 of "The Ontario Telephone Act, 1918," shall be deemed to be valid and lawfully levied, provided that such special rate levied in any year shall not exceed the amount approved by the Board under the provisions of section 88 of the aforesaid Act.

And the Board makes no order for costs or for Law Stamps in respect of this Order.

Order

Upon the application of the above-named Applicant, upon reading the Report of A. B. Ingram, Esquire, Vice-Chairman, who heard the evidence adduced on

behalf of the Applicant and Respondent, and other material on file.

The Board orders and determines that William Joseph O'Sullivan not being the owner of the property located at Lot 27, Concession 4, Township of Tyendinaga, at the time he signed the petition to the Council of the Municipal Corporation of the Township of Tyendinaga praying for the establishment of a telephone system no special rate can be levied upon the said property to meet the payment of any portion of the instalments of principal and interest due in respect of debentures issued to meet the cost of establishing the said system or for the payment of the costs of maintenance.

And the Board further orders and determines that the present owner of the said property, Harold O'Sullivan, is not a subscriber to the telephone system of the Municipality of Tvendinaga as defined in paragraph (g) of section 2 of "The Ontario Telephone Act, 1918," and is therefore not entitled to be furnished with telephone service except upon the terms and conditions prescribed by the said Act and amendments thereto for the extension of the said System to the premises

of persons not being original subscribers thereto.

And the Board makes no Order for costs or for Law Stamps in respect of this Order.

Dec. 15th. Order.

REPORT

The undersigned, having heard the evidence of all parties relative to this application, recommends that the annexed Order be adopted as the Order of the Board.

> (Sgd.) A. B. INGRAM, Vice-Chairman.

Toronto, December 15th, 1926.

December 15th, 1926.

ORDER

Upon the application of the above-named Applicant, in the presence of the Applicant and Respondent, upon reading the Report of A. B. Ingram, Esquire, Vice-Chairman, who heard the evidence adduced on behalf of the Applicant and Respondent, the Report of the Board's Inspector of Telephone Service, and other material on file.

The Board finds and declares:

1. That the payment by the Respondent to the Applicant of One Hundred and two Dollars and Fifty cents (\$102.50), on January 11th, 1923, covered the purchase of seventeen poles on the 14th Concession of the Township of East Williams and forty poles on the 8th Concession of the said township, the last named poles being located on the said Concession between Lot 6 and the second pole east of the Side Road between Lots 10 and 11 of the said township.

2. That the Applicant is the owner of the eleven poles now erected on the 8th Concession of the Township of East Williams opposite Lots 11, 12 and 13, beginning at the third pole east of the Side Road between Lots 10 and 11 of the

said township.

- 3. That the Respondent is, without the consent of the Applicant, occupying pin space for one metallic circuit upon forty-eight poles of the Applicant, commencing at the farm of Charles MacCallum on the road from Fort Rose to Beechwood and proceeding in a southeasterly direction to Concession 4 of the Township of East Williams thence along Concession 4 to the side road between Lots 3 and 4 thence along the said side road in a northwesterly direction to the farm of Alex. McDonald.
- 4. That the Respondent is also occupying pin space for one metallic circuit upon two poles of the Applicant, located on the 14th Concession of the Township of East Williams between the farms of J. McLaughlin and Arch. Morrison.
- 5. That the Respondent has, without the consent of the Applicant and contrary to the provisions of section 78 of "The Ontario Telephone Act, 1918," parallelled the lines of the Applicant on the 8th Concession of the Township of East Williams for the purpose of furnishing telephone service to K. McInroy.

The Board therefore orders:

- 1. That the Respondent shall pay to the Applicant an annual rental of Ten Cents (10c) per pole per annum for the following poles:
- (a) On the 8th Concession from the third pole east of the side road between Lots 10 and 11 to the farm of Mr. Duncan—seven poles;
- (b) From the farm of Charles McCallum to the farm of Alex. McDonald—forty-eight poles;
- (c) From the 14th Concession between the farms of J. McLaughlin and Arch. Morrison—two poles;

the total amount payable to the Applicant as provided herein to be computed from the date upon which the wires were first attached to the poles of the Appli-

cant until December 31st, 1926.

- 2. The Respondent shall forthwith remove the circuit erected on the poles of the Applicant on the 8th Concession of the Township of East Williams between the farm of Mr. Duncan and the farm of K. McInroy, and the Respondent shall further remove any poles which it may have erected for the purpose of furnishing service to the said K. McInroy.
- 3. The Respondent shall forthwith discontinue furnishing service to any person whose premises are located adjacent to the pole leads of the Applicant

in all cases where such service has been installed since November 30th, 1925.

- 4. The Respondent shall not hereafter without the consent of the Applicant install telephone service upon the premises of any person whose property is adjacent to the pole leads of the Applicant, unless and except by Order of this Board.
- 5. The Applicant and Respondent shall forthwith execute an agreement covering the occupation of pin space from January 1st, 1927, by either party upon the poles of the other party, and neither party shall hereafter erect wires upon or make any attachment to the poles of the other party without the previous consent in writing of such other party or by Order of this Board.

And the Board makes no Order for costs, save and except that the Respondent shall pay \$10.00 for the Law Stamps required for this Order.

(Sgd.) A. B. Ingram, Vice-Chairman.

PROCEDURE FILE A-811

Application by the City of Toronto, under subsection (2b) of section 399a of "The Consolidated Municipal Act, 1922," for approval of its By-law No. 10987, repealing its By-law No. 9874 as to the northwest corner of Bloor Street and Walmer Road.

Oct. 30th. Application and material filed.

Dec. 7th. Hearing, pursuant to appointment, 11 to 11.50 a.m., at Board's Chambers. Judgment reserved. Board will view "locus". (See Reporter's Notes.)

Dec. 20th. Judgment delivered (letter)—Application granted.

Dec. 28th. Draft Order filed.

Dec. 28th. Order issued.

December 20th, 1926.

ORDER

Upon the application of the Corporation of the City of Toronto, and upon reading the material filed by C. M. Colquhoun, Esquire, Solicitor for the Applicant, and upon hearing the evidence adduced and what was alleged by Counsel for the Applicant and the owner of the property at the northwest corner of Bloor Street and Walmer Road and certain other ratepayers residing on Bloor Street and Walmer Road, and Judgment on the Application having been reserved until this day,

The Board orders, under and in pursuance of subsection (2b) of section 399a of "The Consolidated Municipal Act, 1922," that the said By-law No. 10987 entitled "No. 10987. A By-law to repeal By-law No. 9874 in so far as it prevents the establishment of a gasoline and oil filling station at the northwest corner of Bloor Street and Walmer Road," be and the same is hereby approved.

(Sgd.) A. B. Ingram, Vice-Chairman.

Application by Thomas Milligan, under section 80 of "The Ontario Telephone Act, 1918," for an Order prescribing the terms and conditions upon which The Beeton Telephone Company Ltd., shall furnish him with service.

Nov. 1st. Application and material filed.

Nov. 19th. Hearing, pursuant to appointment, 11 to 11.05 a.m., and 1.15 to 3.15 p.m. Village Hall, Cookstown. (Vice-Chairman authorized under section 9, chapter 186, R.S.O.) Settlement arranged between parties.

PROCEDURE FILE A-827

Application by the Township of Etobicoke, under Chapter 14, Geo. V., being "The Township of Etobicoke Act," 1923, for an extension of its Water Area No. 11 (as defined by its By-law No. 1707, by adding thereto the area defined and described by its By-law No. 2063.

Nov. 11th. Application and material filed.

Nov. 22nd. Hearing, pursuant to appointment, 11 to 11.15 a.m., at the Board's Chambers. Copy of approval of Provincial Board of Health to be filed. Application granted. Applicant's Solicitor to draft Order.

Nov. 29th. Draft Order filed.

Nov. 29th. Order issued.

November 22nd, 1926.

ORDER

Upon the application of the said Corporation, and upon reading the Notice of the Application and Declaration of Stephen Barratt filed as to the posting up and publication thereof, and a copy of the said By-law and other material filed, and upon hearing counsel for the Applicant, and no one appearing in oppo-

sition to the application,

The Board orders and certifies under and in pursuance of the Special Act, being Chapter 62 of the Statutes of Ontario, 13-14 Geo. V., being a Special Act in reference to the Township of Etobicoke, that the said By-law No. 2063 intituled "By-law No. 2063. A By-law of the Municipality of the Township of Etobicoke to extend or enlarge a defined section or area of the municipality known as Water Area No. 11 as established by By-law No. 1707, and enlargements thereof by adding thereto the lands hereinafter defined and described, and to construct and extend the system of water mains and water works in Water Area No. 11 into the area hereinafter described for the benefit of the said Area," be and the same is hereby approved.

(Sgd.) A. B. INGRAM, Vice-Chairman.

PROCEDURE FILE A-829

Application by W. F. Metcalf, et al., under Section 80 of "The Ontario Telephone Act, 1918," for an Order prescribing terms and conditions for telephone service by the Township of Goderich.

Nov. 11th. Application filed.

Nov. 25th. Hearing, pursuant to appointment, 3 to 4.30 p.m., Town Hall, Bayfield. (Vice-Chairman authorized under section 9, chapter 186, R.S.O.) Service to be furnished on terms and conditions to be prescribed by the Board. Inspector of Telephone Service to make inspection and report, as to difficulties of construction, if any, and as to alternative routes.

Dec. 2nd. Report of Board's Inspector of Telephone Service filed.

Dec. 3rd. Board directs work to be proceeded with.

Where inquiry is made by the Board's expert, \$10 for each day or fraction therechalf-day, and \$5 for each half-day or less occupied in connection with such enquiry.		

THE FOLLOWING GIVES A BRIEF SUMMARY OF THE EXTENSIONS AND IMPROVEMENTS MADE TO THE RAILWAYS UNDER PROVINCIAL JURISDICTION DURING THE YEAR 1926

BUFFALO AND FORT ERIE FERRY AND RAILWAY COMPANY

It is reported by this company that during the period ending December 31st, 1926, they did not make any track extensions.

During the same period they also report that they did not make any expenditure on track

improvements, overhead structure, rolling stock, buildings, machinery, etc.

CORNWALL STREET RAILWAY, LIGHT AND POWER COMPANY, LIMITED

During the year ending 31st December, 1926, this company report that they constructed a more direct route to the N.Y.C. Railway Station, 1,400 feet long, costing \$6,500.00, which reduced the length of the main track from four and a quarter to four miles.

They also report that during the same period they made a total expenditure on track improvements, overhead structure, rolling stock, buildings, machinery, and on any other improve-

ments required, of \$12,964.96.

FORT WILLIAM ELECTRIC RAILWAY

It is reported by this company that during the year ending 31st December, 1926, they did not make any extensions to track.

It is also reported that during the same period they made a total expenditure on track improvements, overhead structure, rolling stock, buildings, machinery, etc., of \$48,407.81.

GUELPH RADIAL RAILWAY

The Hydro-Electric Power Commission of Ontario report that during the period December 31st, 1925 to December 31st, 1926, this company did not make any extension to track.

They also report that during the same period they made a total expenditure on track improvements, overhead structure, rolling stock, buildings, machinery, etc., of \$11,857.50.

THE HAMILTON STREET RAILWAY COMPANY

During the year ending 31st December, 1926, it is reported that this company did not make any extensions to track.

It is also reported that they made a total expenditure on track improvements, overhead structure, rolling stock, buildings, machinery, etc., of \$123,703.07.

THE HAMILTON AND DUNDAS STREET RAILWAY COMPANY

It is reported that there were no extensions made to track, and no expenditure on track improvements, rolling stock, buildings, machinery, etc., during the year ending 31st December, 1926, as the railway is not being operated.

THE HAMILTON, GRIMSBY AND BEAMSVILLE RAILWAY COMPANY, LIMITED

It is reported by this company that during the year ending 31st December, 1926, they did not make any extensions to track. It is also reported that during the same period they did not make any expenditure on track improvements, overhead structure, rolling stock, buildings, machinery, etc.

THE HAMILTON AND BARTON INCLINE RAILWAY COMPANY

This company report that during the year ending 31st December, 1926, they did not make any extensions to track.

They also report that during the same period they did not make any expenditure on track improvements, overhead structure, rolling stock, machinery, etc.

HUNTSVILLE AND LAKE OF BAYS RAILWAY COMPANY

During the year ending December 31st, 1926 this company report that they did not make any extensions to track.

They report during the same period a total expenditure on track improvements, overhead structure, rolling stock, buildings, machinery, etc., of \$604.38.

Hydro-Electric Radial Railway (Essex Division) (Sandwich, Windsor and Amherstburg Railway)

During the year ending December 31st, 1926, it is reported that there was an extension made to track of 2.21 miles, at a cost of \$189,400.79.

They also report a total expenditure on track improvements, overhead structure, rolling stock, buildings, machinery, etc., of \$561,301.72. (In giving these figures they state that the books are not closed for the year.)

THE INTERNATIONAL RAILWAY COMPANY (Niagara Falls Park and River Division)

This company report that during the year ending December 31st, 1926, they did not make any extensions to track.

They report, however, a total expenditure on track improvements, overhead structure, rolling stock, buildings, machinery, etc., of \$5,580.24.

THE INTERNATIONAL TRANSIT COMPANY

It is reported by this company that during the year ending 31st December, 1926, they did not make any extensions to track.

It is also reported that they did not make any expenditure on track improvements, overhead structure, rolling stock, buildings, machinery, etc., during the same period.

KINGSTON, PORTSMOUTH AND CATARAOUI ELECTRIC RAILWAY COMPANY

This company report that during the year ending December 31st, 1926, they did not make any extensions to track.

They also report that during the same period they did not make any expenditure on track improvements, overhead structure, rolling stock, buildings, machinery, etc., except for repairs only.

KITCHENER-BRIDGEPORT STREET RAILWAY

During the year ending December 31st, 1926, it is reported by the Public Utilities Com-

During the year ending December 31st, 1926, it is reported by the Public Utilities Commission of Kitchener that there were no extensions to track.

They also report during the same period a total expenditure made on track improvements, overhead structure, rolling stock, machinery, etc., of \$610.22, and that they sold land and old car barn for \$719.16.

KITCHENER-WATERLOO STREET RAILWAY

The Public Utilities Commission of Kitchener report that during the year ending 31st December, 1926, they installed a new Steel Diamond, of which they paid half the cost amounting to \$821.93.

They also report that during the same year they made a total expenditure on track improvements, overhead structure, rolling stock, buildings, machinery, etc., of \$1,145.70.

LAKE HURON AND NORTHERN ONTARIO RAILWAY

It is reported that during the year ending 31st December, 1926, this company did not make any extensions to track. It is also reported that during the same period they did not make any expenditure on track improvements, overhead structure, rolling stock, buildings, machinery, etc.

THE LONDON STREET RAILWAY COMPANY

This company report that during the year ending 31st December, 1926, they did not make any extensions to track.

They, however, report that during the same period they made a total expenditure on track improvements, overhead structure, rolling stock, buildings, machinery, etc., of \$27,291.01.

THE MIDLAND SIMCOE RAILWAY COMPANY

During the period December 21st, 1925, to December 31st, 1926, it is reported that this company did not make any extensions to track. It is also reported that during the same period they did not make any expenditure on track improvements, overhead structure, rolling stock, etc.

MOUNT McKay and Kakabeka Falls Railway Company

During the year ending December 31st, 1926, this company report that they did not make any extensions to track.

They also report that they did not make any expenditure on track improvements, overhead structure, rolling stock, etc., for the reason that the line was leased to the City of Fort William from August 3rd, 1923, for a period of five years.

NIAGARA PENINSULAR RAILWAY

During the period December 31st, 1925, to December 31st, 1926, it is reported that this company did not make any track extensions, nor did they make any expenditure on track improvements, overhead structure, rolling stock, buildings, etc., during the same period.

PETERBOROUGH RADIAL RAILWAY

The Hydro-Electric Power Commission of Ontario report that during the period ending December 31st, 1926, they did not make any extensions to track of the above railway.

The Commission, however, report that during the same period there was a total expenditure made on track improvements, overhead structure, rolling stock, buildings, etc., of \$266.43.

PORT ARTHUR MUNICIPAL RAILWAY

The Port Arthur Public Utilities Commission report that during the year ending 31st December, 1926, there were no extensions made to the track of this railway, and that during the same period there was no expenditure made on track improvements, overhead structure, buildings, machinery, etc.

SARNIA STREET RAILWAY COMPANY, LIMITED

During the year December 31st, 1925, to December 31st, 1926, this company report that they did not make any extensions to track.

However, they report that during the same period they made a total expenditure on track improvements, overhead structure, rolling stock, buildings, machinery, etc., of \$4,977.02.

St. THOMAS MUNICIPAL STREET RAILWAY

During the year 1926 the St. Thomas Municipal Street Railway ceased operation (February 15th, 1926), and a private company commenced the operation of a bus line in the City of St. Thomas. There is therefore nothing to report in this matter for the period December 31st, 1925, to December 31st, 1926.

SUDBURY-COPPER CLIFF SUBURBAN ELECTRIC RAILWAY

During the year ending 31st December, 1926, this company report that they did not make any extensions to track. They also report that during the same period they did not make any expenditure on track improvements, overhead structure, rolling stock, buildings, machinery, etc.

TEMISKAMING AND NORTHERN ONTARIO RAILWAY

It is reported by the Temiskaming and Northern Ontario Railway Commission that during the year ending 31st December, 1926, they did not make any extensions to the track of this railway.

They also report that during the same period they made an expenditure on track improvements, overhead structure, rolling stock, buildings, machinery, etc., of \$764,454.31.

THE THURLOW RAILWAY COMPANY

During the year ending December 31st, 1926, this company report that they made an extension to track of 1.9 miles at a cost of \$43,515.89.

They report that during the same period they did not make any expenditure on track improvements, overhead structure, rolling stock, buildings, etc.

THE TORONTO TRANSPORTATION COMMISSION

It is reported by this Commission that during the year December 31st, 1925, to December 31st, 1926, they made an extension to track of 1.561 miles at a cost of \$140,000.

They also report that during the same period they made a total expenditure on track improvements, overhead structure, rolling stock, buildings, machinery, etc., of \$780,000.

THE TORONTO AND YORK RADIAL RAILWAY

It is reported by the Hydro-Electric Power Commission of Ontario that during the year ending December 31st, 1926, there were no extensions made to the track of this railway.

It is also reported that during the same period they did not make any expenditure on track improvements, overhead structure, rolling stock, buildings, machinery, etc., but that they had a credit of \$2,555.62.

TOWNSHIP OF YORK RAILWAYS

During the year ending December 31st, 1926, it is reported that these railways did not have any extensions made to track.

It is also reported that during the same period they did not make any expenditure on track

improvements, overhead structure, rolling stock, buildings, etc.

Note:—The Township of York Railways are under the management of the Toronto Transportation Commission. The Commission report that included in the report of the Township of York Railways is the line amounting to 1.76 miles of single track owned by the Town of Weston and operated by the Toronto Transportation Commission in conjunction with the Weston Road line owned by the Township of York.

WENTWORTH INCLINE RAILWAY, LIMITED (Formerly the Hamilton, Mountain Park Co., Ltd.)

This company report that during the period December 31st, 1925, to December 31st, 1926, they did not make any extensions to track. They also report that during the same period they did not make any expenditure on track improvements, overhead structure, rolling stock, buildings, machinery, etc.

FORM TO BE USED BY COMPANIES IN REPORTING ACCIDENTS

ACCIDENTS: Regulations Under and in Pursuance of Sections 274 and 279 of "The Ontario Railway Act, 1914." R.S.O., Chapter 185.

ACCIDENTS.—Every company upon the happening of an accident shall give to the Ontario Railway and Municipal Board notice thereof in writing by delivering the same at the office of the Board in the City of Toronto or by mailing it, postage prepaid, in a registered letter addressed to the Board.

Such notice shall contain a statement signed by a duly authorized officer of such company,

setting forth the information and particulars hereinafter mentioned.

Such statement shall be divided into paragraphs, each of which shall include and refer to one (or one group) only of the numbered particulars hereinafter mentioned, and the paragraph referring to each respective numbered particular shall bear the number corresponding to the number hereinafter given for each such particular.

The numbers of paragraphs and the particulars to which each shall refer as aforesaid, are as follows:-

1. Name or names of company or companies concerned in accident.

2. Numbers of train, engine, car or motor.

3. Date and time of accident.

- Nature of accident.
 Exact location.
- 6. Name in full, address and legal addition of each person injured or killed.

7. Age.

8. Married or single.

9. Passenger, employee or other.

- 10. If employee, length and nature of service with dates and periods of different occupations (if more than one).
- 11. If employee, character, experience, skill and fitness with respect to occupation at time of accident.

12. How engaged at time of accident, and how long on duty.

- 13. Cause of accident, how same occurred, with full particulars and details, and diagram
- 14. Persons in charge, with full names, addresses and the particulars referred to in paragraphs 10, 11 and 12.

15. Result to person and particulars of injury.

- 16. Result to property, including amount of damage.
- 17. Names and addresses of all persons present at, or eye-witnesses of, the accident.
- 18. What investigation (if any), and result of same.

19. Verdict (if any).

The Board reserves the right to require such further and other details, particulars, maps, plans, profiles, documents, models and information or illustration of any kind as to the nature of the accident and a full understanding thereof may suggest or require.

In pursuance of sections 274 and 279 of said Act, the Board declares that all such information

so given in pursuance of this regulation shall be privileged.

Signature of Officer.

REGULATIONS

REGULATION AS TO HEIGHT OF CAR STEPS

Under and in pursuance of a certain order of the Board bearing date the 2nd day of June,

A.D. 1909, The Ontario Railway and Municipal Board made the following regulations:

The steps on all cars hereafter constructed and used by The Toronto Railway Company and all other street and electric railways under the jurisdiction of this Board shall have steps conforming to the following regulations:

On closed single truck cars the height of the first step above the ground shall not be less

than twelve nor more than fifteen inches.

On closed double truck cars the height of the first step above the ground shall not be less

than fourteen nor more than sixteen inches.

On open single truck cars the height of the first step above the ground shall be not less than twelve nor more than fifteen inches, and the distance between the first and second steps and the second step and the floor of the car shall measure twelve inches and nine inches respectively.

On open double truck cars, the height of the first step above the ground shall be not less than fourteen nor more than sixteen inches, and the distance between the first and second steps and the second step and the floor of the car shall measure twelve inches and fourteen inches respectively.

REGULATION RE DRINKING WATER ON PASSENGER CARS

Every Electric Railway Company in Ontario, subject to the jurisdiction of the Board, shall provide in each passenger car which runs 20 miles or more, a suitable receptacle for water with a cup or drinking utensil attached upon or near such receptacle, and shall keep such receptacle, while the car is in use, constantly supplied with cool drinking water for the use of passengers and the conductor and motorman in charge of such car.

This regulation shall not apply to street railways in towns or cities.

Dated at Toronto this 24th day of June, 1909.

(Sgd.) James Leitch, Chairman.

(Sgd.) A. B. Ingram, Vice-Chairman.

(Sgd.) H. N. KITTSON, Commissioner.

CANADIAN NATIONAL AND ONTARIO SAFETY LEAGUES, 1926

The Ontario Railway and Municipal Board is of the opinion that it should give its share of publicity in its Annual Report to some of the work done by these two Safety Leagues, as their success in preventing accidents largely depends upon the amount of publicity given to their energetic work.

CANADIAN NATIONAL SAFETY LEAGUE

The Annual Luncheon meeting of the Canadian National Safety League was held at the King Edward Hotel, Toronto, on February 15th, 1927.

In presenting our report for 1926, the eighth year of the Canadian National Safety League, it is a pleasant duty to thank the Dominion Government for their grant to assist in our campaign.

Up to the time of this report, five provinces, namely, Province of Quebec, the three Maritime Provinces—New Brunswick, Nova Scotia and Prince Edward Island—and the Province of Manitoba, exclusive of Ontario, had been organized for safety work as members of the Canadian National Safety League. In addition to these provincial leagues, general safety work has been spread all over the country.

The Province of Quebec Safety League, continuing the good work and securing finances locally, may be regarded as established. They have inaugurated an active campaign throughout

the Province, and among the public generally.

The unsettled industrial conditions in the Maritime Provinces have made it necessary for us to continue the financial aid to the Maritimes Safety League (covering the Provinces of New Brunswick, Nova Scotia and Prince Edward Island).

The Manitoba Safety League, with headquarters at Winnipeg, is operating through the support of the Canadian National Safety League and we hope that in the near future it will be,

at least to a certain extent, self supporting.

The provinces of Alberta, British Columbia and Saskatchewan have not been neglected from the safety standpoint, in so far as they can be reached from our head office in Toronto, and we now feel that British Columbia is ready for a safety organization to cover its provincial requirements.

ONTARIO SAFETY LEAGUE

The thirteenth Annual Report was presented also at the Annual Luncheon meeting, held in the King Edward Hotel, Toronto, on February 15th.

Nineteen twenty-six was a remarkable year in the history of the League. More money was collected and spent than in any past year, and in making this statement we wish to acknowledge the support and co-operation of many organizations and individuals throughout the entire Province.

Our thanks are due the Government of the Province of Ontario, Ontario Railway and Municipal Board, Workmen's Compensation Board, and other Governmental Departments; Municipalities of Toronto, Hamilton, Ottawa and London, Toronto Transportation Commission, Ontario Motor League, Boards of Education and Separate School Boards, Fire and Police Departments, Boards of Trade and Chambers of Commerce, District Labour Councils, Ontario College of Art, Ontario Optometrical Association, the Harbour Commissioners of Provincial cities, Industrial interests throughout the Province, Rotary and Kiwanis Clubs, Provincial and District Foresters, Chief Fire Rangers, the Canadian Pacific and Canadian National Railways, and all Railway Station Agents, Summer Hotels, Aquatic Clubs, Public Libraries, Principals and Teachers of the Schools, Safe workers in the industries, and numerous friends who have given of their time and money to assist our campaign of Accident and Fire Prevention.

The result of the efficient work continued by the Executive Committee throughout the year has been a steady growth of our campaign against accidents and as a tribute to the solid founda-

tion made by the original charter members.

An outstanding feature of the campaign for 1926 was the School Safety work. Prior to the beginning of the aquatic and traffic seasons, the Chairmen of the Boards of Education and Separate School Boards of some twenty-three places were communicated with by mail and arrangements made with them to give safety talks, show motion pictures, distribute safety buttons and give demonstrations of Resuscitation from apparent death by drowning, electric shock, gaseous poisoning and lightning. In all of the cities visited except Toronto, Ottawa, Hamilton, London, Chatham and Windsor, the respective Chiefs of Police spoke to the school children assembled. In Toronto, Hamilton, Ottawa, London and Windsor, the Chief Traffic Officer spoke, and in Chatham the Chief of the Fire Department addressed the children. This work was started on April 26th in Toronto, and completed in Sarnia on June 25th, and did not interfere with the regular school work nor the examinations before the vacation. It may be significant in connection with our intensive school work for 1926 that 23 less children were killed from the automotive hazard alone than during 1925. In spite of an increase of 48,739 automotive vehicles during 1926 over 1925, the automotive fatalities for 1926 were 298, exactly the same as in 1925, for the Province of Ontario.

The following is a synopsis of the 1926 campaign of the Ontario Safety League:

- The year 1926 completed the thirteenth year of the League's campaign in safety work.
- 2. During the year, over one million pieces of literature, etc., were distributed to School Children, Motorists, Street Car Men, Manufacturers and others, dealing with prevention of accidents and fires and asking their assistance and co-operation in the reduction of fatalities and lesser accidents from these hazards.
- 3. These bulletins were distributed in over six hundred cities, towns and villages in Ontario, and posted conspicuously in Railway Stations, Street Cars, Garages and public places.
- 4. Posters and signs dealing with the Traffic Hazard were erected in cities, towns and rural districts.
- 5. The Safety Essay Competition and the Drawing Contest were carried on as in former years, throughout the schools of Ontario, with largely increased entries in both contests.
- 6. Safety Calendars were distributed and posted prominently all over Ontario. These Calendars emphasized the necessity for Safety in Industry, Care in the Prevention of Fire, and dealt with the hazards of Street and Highway Traffic, Railroad Crossings, Aquatic and Electrocution.

They also showed illustrations on First Aid and Resuscitation.

Detail of literature distributed:

57,200 Industrial Bulletins.

94,200 Traffic and Electric Railway Bulletins.

475,000 Letters to Motorists.

72,800 Special Bulletins.

148,000 School Bulletins.

188,000 Letters to Parents.

36,702 Sundry Circulars.

12,000 Safety Calendars.

38,000 Special Cards and Reports.

75,000 Safety Buttons.

400 School Traffic Signs.

\$600.00 was awarded in prizes in the Essay Contest.

\$420.00 was awarded in prizes in the Drawing Contest.

Safety Films were shown and Safety Talks given in 167 Schools to 56,179 pupils, and 30 Sundry Boys' and Girls' Clubs.
Safety Films were also shown in 20 theatres.
Safety Talks were broadcasted by Radio five times during the year.

Respectfully submitting the above for your consideration

J. M. Gibson, President.

J: F. H. Wyse.

General Manager.

The Ontario Railway and Municipal Board

REPORT OF THE SUPERVISOR OF TELEPHONE SYSTEMS FOR THE YEAR 1926

The following applications under the provisions of "The Ontario Telephone Act, 1918," were dealt with by the Board in 1926:

Under Section 3c: For authority to issue debentures for extensions and improvements to
Telephone Systems under Part I
Under Section 11: For authority to extend a municipal telephone system into another
township. Under Section 13: For the approval of municipal by-laws providing for the establishment
Under Section 13: For the approval of municipal by-laws providing for the establishment
of telephone systems. Under Section 18: For the approval of municipal debenture by-laws to meet the cost of
Under Section 18: For the approval of municipal debenture by-laws to meet the cost of
establishing or extending telephone systems
Under Section 19: For an extension of the period within which municipal debenture by-
laws respecting telephone systems may be passed
Under Section 20: For an extension of the period within which to repay the cost of estab-
lishing a municipal telephone system
Under Section 21: For authority to pass municipal debenture by-laws to meet the cost
of reconstructing, replacing or altering telephone systems
Under Section 24: For the approval of the purchase of an existing telephone system by a
municipality
Under Section 33: To determine the validity of a special rate levied under the provisions
of Part II of "The Ontario Telephone Act, 1918"
of Part II of "The Ontario Telephone Act, 1918". Under Section 67: For the approval of municipal by-laws granting the right to erect poles
and wires upon the highways
and wires upon the highways
territory
Under Section 74a: For the approval of the by-laws of a telephone company
Under Section 78: For the consent to erection of poles and wires parallel with existing
lines
Under Section 79: For an Order preventing the duplication of pole leads upon the same
highway
Under Section 80: For an Order fixing the terms and conditions for furnishing service
Under Section 82: For the approval of agreements providing for interchange of service
Under Section 83: To fix terms for interchange of service
Under Section 86: For the approval of an agreement eliminating competition
Under Section 87: For the approval of the sale of telephone systems.
Under Section 88: For authority to increase the charges for telephone service
Under Section 89a: For authority to furnish free telephone service
Under Section 93: For authority to expend a portion of the moneys set aside for deprecia-
tion upon new construction or extensions.
Under Section 94: For authority to issue stock and bonds
Under Section 107: Complaint as to breach of agreement
Total number of applications

The Board or its Supervisor of Telephone Systems during the year visited eighty-nine different points in the province in connection with the foregoing applications.

The continued policy of the Board in endeavouring to secure an amicable settlement of matters in dispute between the applicant and respondent has, with the assistance of the Board's Supervisor, proved successful in the majority of such cases.

In addition to the applications and complaints referred to, a vast amount of correspondence relating to telephone matters has been dealt with by the Board's Supervisor, through the medium of which much information and assistance has been given to municipalities, companies and other persons interested, and many difficulties that might otherwise have necessitated a formal application and public hearing have been satisfactorily adjusted.

A number of points were visited by the Board's Inspector of Telephone Service during the year for the purpose of investigating complaints made by subscribers, and upon his report and recommendation the Board has been enabled to secure considerable improvement in the telephone service furnished by the systems coming under his observation.

The number of telephone systems within the jurisdiction of Ontario of which the Board has record is 626, operating approximately 109,600 telephones and

representing an investment of about \$10,150,000.00

There are ten systems owned and operated by municipalities under the provisions of Part I of the Act, viz.: the cities of Fort William and Port Arthur, the towns of Cochrane, Dryden, Fort Frances, Kenora and Rainy River, and the townships of Alberton, Caledon and Hilliard.

One hundred and fifteen systems are now established and operating under Part II of the Act and furnishing service in two hundred and sixty towns, villages

and townships.

The cordial relations which continue to exist between the telephone systems under the jurisdiction of Ontario and the Bell Telephone-Company of Canada is a source of much satisfaction to the Board. During the year that company has sold plant to the value of \$44,635.00 and transferred 605 subscribers to systems within the control of the Board, and has purchased plant to the value of \$13,985.00 and acquired 273 subscribers. These changes have been made with the object of adjusting territory in order to improve telephone facilities and avoid unnecessary duplication in the districts affected. The result of these adjustments has been a net gain to the provincial systems of 332 telephones and an increased investment of \$31,650.00.

Detailed statistics and other information relative to these systems will be found in the appendix to this report entitled "Telephone Systems 1927."

Francis Dagger,
Supervisor of Telephone Systems.
